The *Javanese* language, which is a branch of the Malay, has three styles: first, that of ordinary use, that used by a superior addressing an inferior; second, that of an inferior addressing a superior; and a third, that used between equals.

M. HENRY *Proc. Asiatic Soc. Japan* p. 350. [s. 1887.]

Jav'a-nese', n. 1. *sing. & pl.* A native or naturalized inhabitant of Java. The *Javanese* belong to the Malay race, like the Sundanese, but are Mohammedans and a progressive people, occupying the middle of the island; the Sundanese, the western part; and the Madurese, the eastern portion. There are also inhabitants of lesser Indonesian tribes, together with a modern admixture of Chinese, Arabs, Hindus, etc.

2. The language of central Java, of Malaic stock, but largely influenced by Sanskrit. Madurese is spoken in the east and Sundanese in the west.

Largely through Indian influence the *Javanese* became the medium of an important literature as early as the ninth century, A.D. . . . In the ancient form Javanese was modified in its vocabulary to a large extent by Sanskrit, and it was accordingly termed Kavi or Sanskrit-Javanese. The language of Bali is the direct derivative of Kavi in modern Javanese, which is divided into the courtly or Krama, and into the vernacular or Ngoko.

Jes'u-it, *n.* **I.** A member of the Catholic religious order founded by Ignatius Loyola in 1534, and confirmed by Pope Paul III. in 1540, whose proper title is the *Company (or Society) of Jesus.*

Ignatius Loyola. (After *Rubens.*)

The society was organized on a military plan. The members are bound to strict obedience, within the limits of the Constitutions, wherever commanded; if there appears no sin, and are subject to the careful supervision of those above them. The General at the head of the order is chosen for life and has supreme power, subject only to the Pope, the Constitutions, and the general assemblies or congregations of the society. They wear no particular habit. The Jesuits, who have always been famous for zeal, learning, and address, conduct colleges, schools and homes and foreign missions, and have been among the most aggressive and zealous of propagandists. There are four grades of members: novices, scholastics, approved brothers, and temporal; and professed fathers. The coadjutors spiritual are priests who have not attained to such qualifications as are required from the professed fathers, while the coadjutors temporal are lay brothers to whom the menial duties of the society fall. The novice after two years becomes a scholastic, the scholastic in due course is ordained priest and ranks as spiritual coadjutor. The professed fathers are those who have taken a vow of absolute obedience to the Pope, and form the reserve staff, from whom the chief officials of the order are chosen. The Jesuits were suppressed "for the peace of the Church," by Clement XIV. in 1773, but in Prussia, Russia, and Naples, this suppression was ineffective. The society was formally reestablished in 1814 by Pius VII., altho it had been reorganized without opposition in 1792 in Parma, 1801 in Lithuania, and 1804 in Naples. This growth of the society has been rapid, and the General is now aided by five assistants. At the time of their suppression the Jesuits numbered 22,000 members; in 1599 the number stood at 15,231. There are about 3,500 Jesuits of all grades in the United States.

Jew, *n.* 1. A worshiper of God who follows the Mosaic law and ritual. 2. A member of the Hebraic division of the Semitic race; a descendant of Abraham through Sarah in the line of Jacob.

In the Old Testament the word *Jew* is applied to one who followed the Mosaic faith as practised at Jerusalem after the return from the Babylonish captivity; and it is thus used in the Book of Esther. In more modern times the word has been loosely applied to the Hebrew race. Under the theocracy the Jews were known as *Israelites* or *Hebrews*, as *Levites*, and during foreign domination as *Jews*. The modern representatives of this stock call themselves *Hebrews* in race and language, and *Israelites* in religion, but *Jews* in both senses.

3. Originally, a member of the tribe or an inhabitant of the kingdom of Judah: a term used opprobriously by antisemites. [< OF. *Jeu*, *Juieu*, < Gr. *Ioudaios*, < *Ioudata*, Judea, < Heb. *Yehûdâh*, Judah, son of Jacob.] **Jewe.**

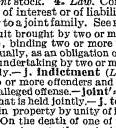
Join'er-y, 1 join'ėr-i; 2 jŏin'ər-y, *n.* **1.** The art of framing the finishing work, making permanent wooden fittings, and covering rough lumber, as in houses and vessels; joiners' work: distinguished from *carpentry*. **join'er-ing†,**



The *joinery* work of Flanders was taking the place of the older rude and clumsy usage.
T. Wright *Homes of Other Days* p. 476. [ca. a. d. 1571.]

join'ing, 1 join'in; 2 join'ing, *n.* A place of junction.

joint, 1 joint; 2 joint, *a.* & *n.* 1. To form with joints; articulate. **2.** To form with a true and accurate edge, as a board to be joined to another. **3.** To cut or divide into joints; disjoint. **4.** To form (parts) into one; join.
II. *a.* To unite as by joints or parts fitting together.

joint, *a.* **1.** Produced by or involving the combined action of two or more; as, *joint* weight; *joint* efforts; *joint* intervention of governments. **2.** United in or having a common relation, action, or character; sharing together or with another; as, *joint* tenants; a *joint* heir. **3.** Participated in or used by two or more; held or shared in common; as, *joint* property; *joint* stock. **4.** *Law.* Combined or joined together in unity of interest or liability. **5.** *Heath Law.* Of or belonging to a joint family. See FAMILY.
—**joint action** (*Law*), a suit brought by two or more persons.—**J. and several** (*Law*), binding two or more persons both collectively and individually, as an obligation or liability.—**J. contract** (*Law*), an undertaking by two or more persons jointly and not severally.—**J. indictment** (*Law*), an indictment that includes two or more offenders and charges them as together guilty of the alleged offense.—**joint' stock",** *a.* Of or pertaining to stock that is held jointly.—**J. tenancy** (*Law*), tenure of or an estate in property by unity of interest, title, time, and possession. On the death of one of the tenants his right accrues to the survivors to the exclusion of his heirs.—**J. tenant,** one of the participants in a joint tenancy.

joint, *n.* **1.** The place, part, line, or surface where two or more things are joined together; a junction or mode of junction; articulation; juncture; hinge.

Joints.

1. Amphiarthrosis, joint between vertebræ. 2. Synchondrosis, between the two hip-bones, in front. 3. Synchondrosis, between the sphenoid bone at the base of the skull in a child. 4. Suture between the two parietal bones at the vault of the skull. 5. Articulation (condylarthrosis), at the base of a finger. 6. Gingly-mus, at the elbow. 7. Enarthrosis, at the hips.

A slight arrow may find the *joint* in the armour before which many weightier shafts have fallen powerless. Susan Warner *Queechy* vol. i. p. 104. [c. 1874.]

2. Specif., in the mechanical arts: (1) *Masonry.* The permanent meeting surface of two bodies, as stones or bricks, held together by weight, cement, or otherwise. (2) The place where the ends of two skeletal or connective tissues meet. (3) The mechanism, method, or means by which a junction is effected. See phrases and list below. **3.** (1) *Anat.* The place of natural or easy separation; a node; also, an internode or portion of stem between two nodes or joints. (2) *Anat.* A place of union of two bones or separate parts of the skeleton; an articulation. See illus. under HORSE.

The joints of the vertebrate body are divided into three great classes: the freely movable, or **diarthrodial joints;** the immovable, or **synarthrodial joints;** and the slightly movable, or **amphiarthrodial joints.** The various kinds of diarthrodial joints are the **arthrodial** or **gliding joint;** the **pivot** or **rotary j.;** the **hinge-joint,** or **ginglymus;** the **condyloid j.,** or **condylarthrosis;** the **screw-j.,** or **cochlearthrosis;** the **saddle-j.,** or **j. by reciprocal reception** (*articulatio sellaris*); and the **ball-and-socket j.,** or **enarthrosis.** Varieties under synarthrodial joints are the **suture j.,** and **synchoudrosis.**
(3) *Geol.* One of a series of approximately parallel divisional planes occurring in many rocks.

Joints are commonly secondary structures, resulting from the stretching and tension accompanying the folding of the rocks, the some classes of joints, as the prismatic or columnar jointing of igneous rocks, result from the contraction upon cooling after consolidation. Other joints, as the peculiar jointing of shales and that of turtle-stones or septarian nodules, result from the shrinkage of fine-grained sediments while drying and hardening. Still others, distinguished from cleavage (1) by being limited and definite in number, and commonly more widely separated than cleavage plates; (2) by passing unmodified through the heterogeneous material, as the pebbles in a conglomerate; and (3) by commonly occurring in several sets, inclined at various angles, and thus dividing the rock into polyhedral blocks of various sizes and shapes.
Almost all rocks are traversed by vertical or highly inclined divisional planes called joints.
Archi. Geikie *Text-Book Geology* p. 423. [Macm. '03.]

4. One of the pieces into which a carcass is cut by a butcher; as, a *joint* of beef. **5.** *Bookbinding.* The junction of the cover and back of a book.
[Colloq., U. S.] **6.** Place of low resort, especially one kept for the purpose of opium-smoking or gambling.
The difference between an opium *joint* and a saloon, so far as the public is concerned, is all in favor of the *joint*.
The Voice [New York] Nov. 12, 1891, p. 4, col. 1.

7. [Slang.] The implements of an outside book-maker at a race-track. [OF., < L. *junctus*, < *jungo*, join.]—**bell-hangers' joint,** a joint made between wires by looping the ends together and twisting each about the body of its own wire.—**Britannia j.,** a lap-joint, as in a telephone-wire, made by binding the pieces of union together with fine wire, and soldering.—**Charcot's j.,** same as ARTHROPATHY, 2.—**Chopart's j.** (*Anat.*), the junction of the two rows of tarsal bones.—**cousin-j'oint,** a joint between wires by looping the ends together and twisting each about the body of its own wire.—**Britannia j.,** a lap-joint, as in a telephone-wire, made by binding the pieces of union together with fine wire, and soldering.—**Charcot's j.,** same as ARTHROPATHY, 2.—**Chopart's j.** (*Anat.*), the junction of the two rows of tarsal bones.—**cousin-j'oint,** a cousin.—**folded j.,** a rabbet-joint.—**hysterical j.** (*Pathol.*), pain in a joint without objective cause or lesion.—**joint'-bed"ded,** *a. Masonry.* Laid so that the usual horizontal surface becomes a vertical joint; said of stones.—**J.-bolt,** *n. Carpentry.* A bolt for joining one timber to another in T form.—**j.-box,** *n. Elec.* An iron box surrounding electric wires or cables where they are joined or spliced.—**j.-chair,** *n.* A railway-chair supporting the ends of rails that join each other.—**j.-clay,** *n.* Any clay that breaks up into angular lumps when dry or exposed to the air.—**j.-collar,** *n.* An flanged collar fitting used in a joint-coupling.—**j.-coupling,** *n.* Any device for coupling sections of shafting or the like.—**j.-end,** *n.* In vehicles, an iron piece, as the end of a carriage-bow, having a hole in one end to receive a bolt.—**j.-evil,** *n.* A species of zymotic disease; lepra nervorum.—**joint'-ill"-,** *n.* Any plant of the genus *Gratum* or of the genus *Ephedra*, especially *E. distachya*, a shrub with articulated joints and two small linear leaves at each jointed node. **2.** Any taxaceous conifer.—**j.-grass,** *n.* **1.** A grass (*Paspalum distichum*) with its flowers in a pair of spikes at the top of the stem, growing in wet grounds in the southern United States. **2.** Any scouring-rush or horsetail. **3.** The yellow bedstraw (*Galium verum*).—**j.-hinge,** *n.* A strap-hinge.—**j.-oil,** *n.* The fluid normally found in the movable joints of the body: synovia.—**j.-plate,** *n.* *Mach.* A plate on which a joint's movable parts turn, as in a knuckle-joint.—**j.-pipe,** *n.* A short section of pipe used in joining two sections of a regular length.—**j.-plane,** *n.* *Mach.* Briefly, a joint in a rock mass; more loosely, the face of rock bounded by a joint. As in the case of bedding-planes, joints are not entirely plane, but usually of broadly curved or close approximations to planes; hence the use of the term.—**j.-pliers,** *n. pl.* Small pliers used by watchmakers and makers of instruments.—**j.-ring,** *n.* Same as GIMBAL-ring.—**j.-rule,** *n.* In bookmaking, a rod for pressing a book into proper shape.—**j.-runner,** *n.* In plumbing, a rope, soaked with wet clay, used in packing a pipe-joint.—**j.-rust,** *n.* A disease of grass-stems, due to the parasitic fungus *Puccinia tyriana*.—**j.-saw,** *n.* See SAW.—**j.-sensation,** *n. Psychol.* A sensation due to stimulation of the nerve-endings distributed over the articular surfaces; an articular sensation.—**j.-sense,** *n. Psychol.* The sense of bodily movements and positions, as well as of the weight and allied qualities of other bodies, which is due to the pressure and friction of one articular surface against the other. Such articular sensibility belongs to both the kinesthetic and the stereognostic senses.—**j.-snake,** *n.* A snake-like lizard; the glass-snake.—**j.-splice,** *n.* A splice that is reinforced by a fish-plate or bar.—**j.-stool,** *n.* **1.** A stool made of parts jointed together. **2.** A chair or other supporting fixture for the person between the knee and hip.—**j.-strip,** *n. Car-building.* A grooved wooden strip for the insertion of corrugated metal roofing-sheets.—**j.-rest,** *n.* A bed to sustain the electrical resistance coil in a calorimeter or of its insulation.—**j.-tool,** *n.* A jewelers' hand-vise for filing joint-wire ends.—**j.-water,** *n.* Synovia.—**j.-wire,** *n.* Tubular wire used to form the sockets, as between the parts of a watch-case.—**metacarpal joints** (*Anat.*), articulations of the metacarpal bones of the last four digits with each other.—**metatarsal joints,** articulations of the metatarsal bones of the last four digits with each other.—**nail-j.,** *n. Anat.* The joint just behind the nail.—**out of j.,** dislocated; out of proper place; hence, figuratively, in confusion; as, the times are out of joint.—**put out of j.,** to displace or dislocate joint, sunk between stones.—**second j.** **1.** The thigh of a fowl. **2.** The middle joint of a fishing-rod.—**tarsometatarsal j.** (*Anat.*), the articulation of the tarsal bones with the second row of the tarsal bones.—**to break j.,** in masonry, to make a joint in one course, as of bricks, come opposite an unbroken surface in the next.—**transverse j.** (*Anat.*), the mediotarsal joint between the astragalus and calcaneum on the one side and the cuboid and navicular bones on the other.

PARTIAL LIST OF JOINTS.

[For other joints, as **carvel-joint, cramp-j., drip-j., feather-j., fish-j., jump-j.,** etc., see CARVEL, etc.]

Joints are named from some feature of their mechanism, shape, or use. Compound joints are made from the preceding joined or confined; as, **abutting joint** (one where the end of one piece comes squarely against the side or end of another); **bead-j.** (one formed by a bead); **angle-j.** (one of two pieces meeting at an angle), **ball-j.** (see BALL AND SOCKET, under BALL), **beaking-j.** (formed by the ends of several boards in one line), **bell-and-spigot j.** (made by inserting one pipe into a bell-like enlargement at the end of the adjoining pipe), **bevel-j.** (a miter-joint), **blown j.** (in plumbing, formed by a blowpipe in soft metal, usually lead), **bracket-j.** (a miter-joint strengthened with a bracket-conductor), **bracket-j.** (stiffened by a brace), **bridge-j.,** in railroading a fished rail-joint occurring between ties, and supported below by a plate resting on the two adjacent ties; a suspended joint, **bridle-j.** (in carpentry work, a joint formed by mortising the end of a timber into the side of another), **butt-j.** (one formed by joined surfaces or edges without overlapping: distinguished from *lap-joint*), **cardan j.** (a universal joint enabling one shaft to drive another at right angles thereto), **chamfered j.** (a miter-joint), **compass-j.** (employed in accompanying, having single and concentric disks permitting relative motion or opening in one plane), **cone-j.** (made by drawing together the tapering ends of two pipes by a sleeve-nut and the form of two cones without the apex), **coursing-j.** (between two voussoirs), **cup-j.** (a ball-and-socket joint; also, one sealed with solder), **dovetailer lap-j.** (a lap-joint locking by dovetailing of the metal behind), **dowel-j.** (strengthened by a pin or dowel), **edge-j.** (formed by two edges meeting in a corner: a carpenters' term), **expansion-j.,** in railroading lengthwise movement, as of pipes or of parts of a bridge), **face-j.** (a vaulting joint that shows on the arch-face), **filleted j.** (made by fitting a flat band of wood into a groove cut from the corners of the meeting ends of two timbers), **flashing-j.** (between roofing-sheets where their edges meet on a ridge), **flush-j.** (a butt-joint not projecting beyond the general level, sometimes having a strengthening-piece on the inside face; also, a masonry joint filled with mortar and pointed), **globe-j.** (a ball-and-socket joint), **halving-j.** (having both parts cut away and fitted equally on their faces, and the square or gains lapped or locked), **heading-j.** (between two boards, at right angles to their fibers, or between two voussoirs in the same course), **hinge-j.** (permitting motion in but one plane), **hydraulic j.** (sealed with spelter or other solder), **inserted j.** (a pipe-joint made by inserting one pipe in another or in a bell attached thereto), **insulated j.** (a rail-joint insulated against the passage of an electric current), **internal j.** (a closure of a break on an inaccessible side of a large lead pipe, by cutting two flaps, folding them back, soldering the ends of the flaps, and then closing and soldering the flaps), **knock-off j.** (used to connect deep-well rods, which are notched together and fastened by means of a clasp), **lap-j.** (having overlapping ends or edges, as distinguished from a butt- or a flush-joint), **lapped-butt j.** (combination of a lap-joint with a butt-joint), **lens-j.** (an annular joint with lens-shaped section, allowing lateral motion, connecting a pair of pipes), **locket-and-spigot j.** (a bell-and-spigot joint), **match- or matching-j.** (a tongue-and-groove joint: a joint in match-boarding), **miter-j.** (the junction of two pieces at equal angles), **open-j.** (a gains lapped or locked), **heading-j.** (between two boards, at right angles to their fibers, or between two voussoirs in the same course), **hinge-j.** (permitting motion in but one plane), **hydraulic j.** (sealed with spelter or other solder), **inserted j.** (a pipe-joint made by inserting one pipe in another or in a bell attached thereto), **insulated j.** (a rail-joint insulated against the passage of an electric current), **internal j.** (a closure of a break on an inaccessible side of a large lead pipe, by cutting two flaps, folding them back, soldering the ends of the flaps, and then closing and soldering the flaps), **knock-off j.** (used to connect deep-well rods, which are notched together and fastened by means of a clasp), **lap-j.** (having overlapping ends or edges, as distinguished from a butt- or a flush-joint), **lapped-butt j.** (combination of a lap-joint with a butt-joint), **lens-j.** (an annular joint with lens-shaped section, allowing lateral motion, connecting a pair of pipes), **locket-and-spigot j.** (a bell-and-spigot joint), **match- or matching-j.** (a tongue-and-groove joint: a joint in match-boarding), **miter-j.** (the junction of two pieces at equal angles), **open-j.** (a

1. Telegraphic joint. 2. Pipe-joint.

joint with a space between the ends of two adjacent rails), as in a railway), **ring j.** (a circular flange-joint, as between pipe-ends), **rivet-j., riveted j.** (formed by rivets), **roll-j.** (formed by folding one metal sheet over another and pressing together in two), **rolled j.** (a wiped solder-joint made upon two loose pipes, by holding the wiping-cloth stationary and rolling them upon supports), **rule-j.** (employed in foot-rules, etc., employing a pin, and having a shoulder to prevent opening beyond a straight line), **rust-j.** (made by the rusting action of rust on introduced iron borings wet with sal ammoniac), **S j.** (between metal sheets, the edges of which are inserted in the folds of a strip bent into an S-form in cross-section), **saddle-j.** (a sheet-metal joint in which one edge overlaps and straddles the turned-up edge of the next), **scarf-j.** (made by scarfing), **shackle-j.** (formed by a series of shackles and a bolt), **shoved-j.** (made by laying a brick upon a thick bed of mortar and shoving it so as to force the latter up into the vertical joint next to the last previously laid brick), **sleeve-j.** (between sections of pipe, each of which is inserted in a sleeve: usually an expansion-joint), **solder-j., soldering-j.** (made with solder, as between two lead pipes), **spigot-j.** (a pipe-joint made by inserting the end of one pipe into that of another), **splice-j.** (formed by scarfing, lapping, fishing, or splicing), **square j.** (having no feather or tenon), **strap-j.** (a connection by a slotted metal strap and key, as at the end of a connecting-rod), **struck j.** (in masonry, one from which excess mortar is removed to form a smooth finish), **stump-j.** (having a stump to prevent folding except in one direction, as in a rule-joint), **surface-j.** (uniting metal plates, etc., at their margins, usually by means of flanges or laps, secured by soldering or riveting), **suspended j.,** (a joint in a rail that does not rest upon a sleeper), **swivel j.** (having a swivel to permit twisting), **sypher-j.** (chamfered), **T j.** (joining the end of a timber or the like to the side of another), **telephonic j.** (a joint suitable for a conducting wire: often a Britannia joint), **tenon-j.** (made by one or more tenons and mortises), **thimble-j.,** (an expansion sleeve-joint in a pipe-line), **three-ste-j.** (a joint for rails in which the splice extends over three ties; hence, any supported rail-joint), **tongue-and-groove j.** (an edge-joint, as between two boards, one of which has a projection which fits a groove in that of the other), **tuck-j.** (in masonry, one finished with a hollow-faced jointer so that the mortar is rounded to form a bead), **tuck-j.** (a joint in masonry presenting the appearance of tucks), **U-j.** (a wire-joint made by intertwisting: employed in American telegraph-lines), **union-j.** (a pipe-coupling, permitting disconnection without disturbing other sections), **wire-j.** (a joint between ends of wire: also, one between two plane surfaces kept tightly pressed together with an intervening wire of soft metal which flows itself to bring surface irregularities, thus preventing the passage of fluid under pressure), etc.

joint'age, 1 joint'āj; 2 joint'ăj, *n.* Connection or joining.

joint'ed, 1 joint'ed; 2 joint'ĕd, *a.* Having joints, knots, or nodes; articulated; as a *jointed* rule. See JOINT, *n.*
The harder kinds of sand-rock are always *jointed*, and the rock breaks according to the structure.
D. T. Ansted *Great Stone Book* pt. iii, p. 157. [c. a. p. 1863.]
—**joint'ed-ly,** *adv.*—**joint'ed-ness,** *n.*

joint'er, 1 joint'ur; 2 joint'ẽr, *n.* **1.** One who or that which joints. Specif., in wood-working: (1) A jointing-plane. (2) A saw that squares the edges of boards, making them straight, parallel to each other, and at right angles to the face of the board. (3) A planing-machine for truing the edges of boards. (4) A plane or a machine for shaping the heads, backs, or edges of shingles.
2. *Bricklaying.* (1) A piece of iron bent in two opposite directions, built into a wall to strengthen it. (2) A tool for filling the cracks between courses, blocks, or bricks. (3) A tool for marking out joints. (4) A mold into which the lead is poured at the junction of two water-pipes. **3.** [W. Ind.] *Bot.* A shrub (*Piper geniculatum*) of the pepper family.

joint'ing, 1 joint'iŋ; 2 joint'ing, *n.* The act or process of making a joint, or the joint itself.—**joint'ing-machine",** *n.* A machine with a rotating head having cutters in its flat face and producing perfectly true planes, as for glued work.—**j.-plane,** *n.* **1.** A large plane used to true the edges of boards that must be fitted together closely. **2.** A small extra share on a plow.—**j.-rule,** *n.* In bricklayers' rule used in marking out the joints in brickwork.

joint'ist, 1 joint'ist; 2 joint'ist, *n.* [Slang, U. S.] The proprietor of a joint, or illicit drinking-saloon.

joint'less, 1 joint'les; 2 joint'lĕs, *a.* Having no joints.

joint'ly, 1 joint'li; 2 joint'ly, *adv.* In a joint manner; unitedly.
He was now [about 1529] appointed by the Privy Council, *jointly* with Cranmer, to compose a regular code of the Protestant faith.
E. Lodge *Portraits, Nicholas Ridley* in vol. i. p. 230. [ws. s.]

joint'ress, joint'ress, 1 joint'res; 2 joint'rĕs, *n.* [Rare.] **1.** A jointuress.
2. A woman who is a joint ruler or owner.

joint'run"ner, *n.* See under JOINT, *n.*

joint'stool, 1 joint'stul or joint'stul; 2 joint'chur or joint'yur, *n.* [JOIN'TURED; JOIN'TUR-ING.] To settle a jointure on.

joint'ure, *n.* **1.** *Law.* (1) A settlement of land and tenements made to a woman in consideration of marriage, as a substitute for dower. (2) In early use, a joint estate limited to both husband and wife as a joint tenancy and subject to survivorship.
The Statute of Uses (27 Henry VIII., c. 10), by transferring the legal title in lands to those who had the use or beneficial ownership, revived the dower right of the wife in these lands: it also, however, provided that she could not benefit by both, but must choose between the jointure and her dower. A **legal jointure,** in accordance with the statute, must declare that it is given to the wife in full satisfaction of her dower: it must be made directly to her and not to a trustee: it must consist of real property: must be executed prior to the marriage, and must be made to take effect on the husband's death. An **equitable jointure** is one under which the wife is provided for when she is not entitled to *legal jointure*.
She was entirely interested in his scientific pursuits, and the *jointure* which she brought removed all further anxiety about money affairs. E. S. Holden *Sir William Herschel* p. 80. [c. 1881.]
2†. A joining together. **3†.** A joint of armor. [F., < L. *junctura*, < *jungo*, join.] **joint'war-,** **joint'ure-less,** *a.* Having no jointure.—**joint'ur-ess,** *n.* A woman who has a jointure.

joint'weed", 1 joint'wid"; 2 joint'wēd", *n.* **1.** A slender erect American annual herb (*Polygonella articulata*, formerly *Polygonum articulatum*) of the buckwheat family, with linear filiform leaves jointed at the base, and flowers on jointed pedicels. **2.** The mare's-tail (*Equisetum vulgatis*).
3. A species of scouring-rush (*Equisetum*).

joint'worm", 1 joint'wurm"; 2 joint'wŭrm", *n.* The larva of a plant-feeding chalcidid hymenopterous insect (genus *Isosoma*), as *I. hordei*, that forms galls on the stalks of wheat, barley, etc., in America, doing great damage. Among numerous species the best-known are *I. hirtiforme*, which at-

tacks rye; *J. irritici*, which is injurious to wheat; and *J. hordei*, which destroys barley.

joint'y, 1 joint'a, 2 jŏint'y, *a.* Full of joints; specif., in mining, full of minute cracks or crevices, as rock.

Join'ville', 1 swañ'vil'; 2 zhwăñ'vil', *n.* **1. François Ferdinand Philippe Louis Marie d'Orléans de,** *Prince* (⁶/₁₄ 1818–⁸/₁₄1900), a French naval officer; third son of King Louis Philippe; exiled in England from 1848 to 1871; visited America in 1861 and later accompanied General McClellan in the Virginia Peninsular campaign. **2. Jean or Johan,** Sire de (1224–1319), French crusader and chronicler.

Join"ville'-le-Pont', 1 le-pŏn'; 2 -le-pŏn', *n.* A town in Seine department, France; military school of gymnastics.

joist, 1 joist; 2 jŏist, *n.* [Irish or supply with joists.

joist, *n. Building.* One of the horizontal timbers that support a floor or a ceiling or both, the former being known as **floor-joists** and the latter as **ceiling-joists.** Floor-joists are never less than two inches in thickness and as a rule at least nine inches in depth.— **bridging-joist,** *n.* See BRIDGING.

I found myself in a lofty antique hall, the roof supported by massive *joists* of old English oak. IRVING *Sketch-Book, Mutability of Literature* v. 159. (G. P. P. 1851.)

[< OF. *giste, < gesir*, lie, < L. *jacere;* see JACENT.]

joist'ing, 1 joist'iŋ; 2 jŏist'iŋ, *n.* **1.** The timbers supporting a floor, or the like. **2.** The joists of a building in the aggregate.

Jó'kai, 1 yō'kai, **Maurus** (or **Mór**) (⁶/₁₅ 1825–⁵/₇ 1904). A Hungarian novelist; *A Hungarian Nabob.*

Jok'de-am, 1 jok'di-am; 2 jŏk'de-ăm, *n. Bib. Josh.* xv, 56.

joke, 1 jōk; 2 jōk, *n.* [Cf. JOCK, JOCOSE, etc.] **1.** *t.* To make merry with; cast jokes at; rally; so *joke a man on* his baldness. **II.** *i.* To make jokes; jest.

—**joke'ing-ly,** *adv.*—**joke'ish,** *a.* Given to joke. **joke'y‡.**

joke, *n.* **1.** Something done for the purpose of exciting a laugh, often at the expense of some participant in person or thing; especially, a witty or humorous remark or paragraph. **2.** A subject or object of merriment.

Why, if the tale standing *joke* of a shall be the standing *joke* of the mess-table, until some greater fool than myself can be found. COOPER *Pilot* i. 12. [v. r. c.]

3. Something not in earnest or in sport.

Gentlemen, This universe up to the edge of the tomb is not a *joke.* JOSEPH COOK *Transcendentalism* p. 160. [o. a. c. 1873.]

[< L. *jocus*, joke.] Syn.: see WIT.—**in joke,** in jest.

joke'er, 1 jōk'er; 2 jōk'er, *n.* **1.** One who jokes; a jester.

joke'ster‡; job'ist‡. **2.** In some forms of the game of euchre, an extra card that is always the highest trump.

3. A device employed in playing a trick. **4.** [Slang.] A fellow; individual. **5.** [Slang, U. S.] In legislation, a bill, a clause ambiguously worded with the object of rendering the bill practically nugatory without arousing suspicion at the time when it is under discussion.

joke'smith', 1 jōk'smith'; 2 jōk'smith', *n.* [Colloq.] A maker of jokes; professional joker.

joke'some, 1 jōk'sum; 2 jōk'som, *a.* Of a jocular character.—**joke'some-ness,** *n.*

Jo'kim, 1 jō'kim; 2 jō'kim, *n. Bib. 1 Chron.* iv, 22.

Jok"ja-kar'ta, 1 yok'ya-kär'ta; 2 yŏk'ya-kär'ta, *n.* **1.** A Dutch residency and native state in Java; area, 1,101 sq. m. **2.** Its capital; has ruins of ancient temples.

Jok'me-am, 1 jok'mi-am; 2 jŏk'me-am, *n. Bib. 1 Chron.* vi, 68.

Jok'ne-am, 1 jok'ni-am; 2 jŏk'ne-am, *n. Bib. Josh.* xxi, 34.

Jok'shan, 1 jok'shan; 2 jŏk'shan, *n. Bib. 1 Chron.* i, 32. [Heb., fowler.]

Jok'tan, 1 jok'tan; 2 jŏk'tan, *n. Bib. Gen.* x, 26. [Heb., small.]

Jok'the-el, 1 jok'thi-el *or* -thil; 2 jŏk'the-ĭl *or* -thĕl, *n. Bib. Josh.* xv, 38. [Heb., God's reward or victory.]

jo'kul, 1 yō'kul; 2 yō'kŭl, *n.* [JO'KLAR, 1 -klär; 2 -klar, *pl.*] **1.** A glacier. **2.** An Icelandic mountain, a large portion of which is above the snow-line. [Ice., akin to YOKE, 7.]

jō'kull‡.

Jo-la'ha, 1 jo-lā'ha; 2 jo-lā'ha, *n.* [Hind.] One who belongs to a Mohammedan caste of weavers widely distributed in India.

[< F. *journée*, LL. *diurnata*, < L. *diurnus*, daily, < *dies*, day.] **journey's end.**

Syn.: excursion, expedition, pilgrimage, tour, travel, trip, voyage. A *journey* is a direct going from a starting-point to a destination, ordinarily over a considerable distance; we speak of a day's *journey*, or the *journey* of life. *Travel* is a passing from place to place, not necessarily in a direct line or with fixed destination; a *journey* through Europe would be a passage to some destination, and at the farther end of the *journey*; *travel* in Europe *may* be in no direct course, but may include many *journeys* in different directions. A *voyage*, which was formerly a journey by land, is now applied to a considerable distance by water, especially by sea; as, a *voyage* to India. A *trip* is a short and direct *journey*. A *tour* is a *journey* that returns to or near the starting-point, generally over a considerable distance; as, a bridal *tour*, or business *tour*. An *excursion* is a brief *tour* or *journey*, taken for pleasure, often by many persons at once; an *excursion* to Niagara. *Passage* is a general word for a *journey* by any conveyance, especially by water; as, a rough *passage* across the Atlantic; *transit*, literally the act of passing over or through, is used specif. of the conveyance of passengers or merchandise; rapid *transit* is demanded for suburban residents or perishable goods. *Pilgrimage*, once always of a sacred character, retains in derived use that character; as, a *pilgrimage* to Stratford-on-Avon.—Prep.: a journey *from* Naples *to* Rome; *through* Mexico; *across* the continent; *over* sea; a journey *into* Asia; *abroad*; *by land*, *for* pleasure; *on* a journey.—**a day's journey,** a variable itinerary measure based on the average distance traveled in a day.—**jour'ney-bat'ed,** *a.* Fatigued by a journey; worn with travel.—**jour'ney-man,** Johnny-cake.—**j.-ring,** *n.* A portable sun-dial. 2. The fiftieth anniversary of any event, as of a monarch's accession to the throne, of the founding of a city, church, etc., or of the beginning of a term of office; also, the year of such anniversary.

But all the Revolutionary Fathers are not gone; some still survive among us; the forms of the world have to hail the *jubilee* of the independence they declared. EVERETT *Orations and Speeches, July 4, 1826* p. 100. [a. s. o. 1852.]

3. A season of rejoicing, or festivity, as for liberation or victory; as, earth's *jubilee.* **4.** *R. C. Ch.* A year of special indulgence, appointed by the Pope, during which compliance with certain conditions of confession, communion, good works, etc., will remove certain or all the penal consequences of sin. It is commonly stated that the first R. C. jubilee was instituted by Pope Boniface VIII., by the bull *Antiquorum fama,* dated Feb. 22, 1300, which granted "great remissions and indulgences for sins" to all who visited the city of Rome and the basilica of St. Peter. Dante refers to this event in his *Inferno* and calls it the Giubileo. The last jubilee of the 19th century. A special feature of the jubilee consists of the unwalling and walling up of the "holy doors" of the churches the pilgrims are required to visit; that of St. Peter's was walled on the Christmas eve preceding the jubilee year by the Pope, who knocks three times on the door with a silver hammer, saying "Open to me the gates of righteousness"; then the door is again closed by him on the following Christmas eve. The jubilee year is very often known by its Italian name of *Anno Santo.*

Judge, 1 juj; 2 jŭdj, *n.* [JUDGED; JUDG'ING.] **I.** *t.* To form a conclusion, or decide a question, regarding; pronounce a judgment or opinion upon; estimate the truthfulness or quality of; criticize; as, to *judge* a painting; I wish I could *judge* him more favorably.

In *judging* of animals . . . let us not forget that a kindly spirit will never do any harm.
MAX MÜLLER *India* lect. ii, p. 93. [r. a. w. 1883.]

2. To decide authoritatively, as a controversy or suit, by weighing evidence and deciding questions of law or discretion; as, to *judge* a case.

Every great matter they shall bring unto thee, but every small matter they shall *judge.*
Ex. xviii, 22.

3. To examine and pass sentence on; try judicially.

Then, all the saints assembled, thou shalt *judge,*
Bad men and angels.
MILTON *P. L.* bk. iii, l. 330.

4. To hold as judgment or opinion; consider; with a clause as object; as, I *judge* that he has acted fairly. **5.** To exercise authority over as a Hebrew judge; govern. [Rare.] To sentence as a judge; condemn; adjudge. **II.** *i.* **1.** To form a judgment or mental affirmation, as after consideration or critical examination; estimate or decide, as concerning the truth, value, or importance of anything; as, do not *judge* hastily.

Conscience is the faculty by which we *judge* of acts as right or wrong. PHILLIPS BROOKS *Candle of the Lord* p. 75. [b. p. 1.]

2. To hear and determine a case, and pass sentence, as one having civil authority; sit in judgment. **3.** To affirm or deny, with regard to existence, attributes or relations, and whether on a basis of immediate perception or of conscious reasoning.

In everyday discourse the word *judge* is used to express the process of coming to a decision about a thing, when we do not reason out a conclusion explicitly or formally, but apply in a rapid and automatic manner the results of past experience to a new case.
JAS. SULLY, *Outlines of Psychol.* p. 391. [a. 1884.]

4. To form and express a judgment about another; especially, to pass adverse judgments or make harsh criticisms. [< F. *juger,* < L. *judico,* < *judex;* see JUDGE, *n.*] — **judge'a-bl(e)**†, *a.* [Rare.]

Judge, *n.* **1.** A judicial officer invested with authority to administer justice.

A *judge,* in the legal sense, is a judicial officer appointed or elected to preside in courts of law, and to decide legal questions duly brought before him. The name is, however, sometimes given to other legally constituted officers; as, the *judges* of election; it is also loosely applied to justices of the peace, referees, and even to laymen. In both England and the United States judicial officers of all sorts are spoken of as *Judge* So and So, even when their official title is not *Judge* or *justice,* as in the case of a chancellor or recorder. In England the term is not used as a title in Scotland, whereas it is so used in the United States and in some of the British colonies.

The *judge* is only the mouth of the law, and the magistrate who punishes is only the hand.
JOHN TODD *Students' Manual* p. 245. [b. a. cn. 1866.]

2. One who decides upon the respective merits of persons, animals, things, etc., as between contestants for excellence in production or for physical or mental superiority; as, a *judge* at a race-course, dog-show, yacht-race, or oratorical contest. **3.** One who is competent to decide upon the characteristics or merits of persons, animals, things, etc.; a connoisseur; as, a *judge* of human natures, horses, wine, or paintings. **4.** *Jewish Hist.* One of the rulers that governed the Israelites, as a whole or in part, from the death of Joshua to the anointing of Saul: differing greatly in power and functions, and generally leaders raised up for some particular emergency in the unsettled transition state between the nomadic and the national existence of the Hebrew people. **5.** *Coal-mining.* A measuring-rod. [< F. *juge,* < L. *judex* (*judic-*), < *jus,* law, + *dico,* say.]

SYN.: arbiter, arbitrator, justice, referee, umpire. In most games the *judge* is called an *umpire;* as, the *umpire* of a game of ball or cricket. A *referee* is appointed by a court to decide disputed matters between litigants; an *arbitrator* is chosen by the contending parties to decide matters in dispute without action by a court. A *justice* of the peace is appointed by a court to decide where *arbitrators* disagree. *Arbiter,* with its suggestion of final and absolute decision, has come to be used only in a high figurative sense; as, man now be the *arbiter;* the Supreme *Arbiter* of our destinies. The *judges* of certain courts, as the United States Supreme Court, are technically known as *justices.*

—**city judge, municipal j.,** a judge having jurisdiction in a city.—**Judge'-Ad'vo-cate,** *n.,* **J.-Advocate General,** see ADVOCATE, 1.—**j. delegate,** a judge whose authority has been delegated to him with respect to the performance of acts by another.—**J. Lynch,** the personification of lynch-law.—**j.-made,** *a.* Created or constituted by judges or judicial decision: specif., denoting those decisions handed down by judges and having the effect of law, which extend or restrict the scope of statutes. While such decisions are generally recognized as being rendered necessary by the development of new conditions and the call for more effectual remedies, the characterization is frequently applied in an opprobrious sense when viewed as being violations of statute.—**j. martial,** a judge of a court martial; *pl.* of an election, one of several persons who act as a body in receiving, counting, recording, and reporting to the proper authorities the votes given at an election.—**j. ordinary,** the judge of the English Court for Divorce and Matrimonial Causes; in Scotland, any judge having a fixed and determinate jurisdiction.—**king's j.** (*Common Law*), in England, a commissioner of assize.—**lord j.,** in Scotland, a lord of justiciary.—**lay j.,** a judge who is not a professional lawyer.—**probate j.,** a judge of a probate court; surrogate; the ordinary.—**sid j.,** a magistrate of inferior rank who sits with one of higher degree.

judg'ment, 1 juj'mənt *or* -mĕnt; 2 jŭdj'mĕnt, *n.* **1.** **judge'ment,**) The act or faculty of affirming or denying a conclusion, whether as based upon a direct comparison of objects or ideas, or derived by a process of reasoning; the act or faculty of concluding a thought-process with affirmation or denial.

Judgment is the Yea-No consciousness: under it I include every mode and degree of affirmation and denial—everything in the nature of an acknowledgement explicit or implicit of objective existence. G. F. STOUT *Anal. Psych.* i, 97. [MACM. & CO.]

Judgment, for the most part, ripens very slowly.
SHERWOOD *Men and Manners* essay vi, p. 33. [w. & t. 1820.]

2. The result of judging; the decision or conclusion reached, as after consideration or deliberation; belief or

assertion that something is or is not; as, let us not forestall the *judgment* of posterity.

Nor is the people's *judgment* always true.
DRYDEN *Absalom and Achitophel* pt. i, l. 781.

3. *Law.* (1) The sentence or final order of a court in a civil or criminal proceeding; the sentence of the law; the final determination or adjudication of the rights of the parties to an action; decision.

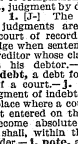
The *judgment*, though pronounced or awarded by the *judges*, is not their determination or sentence, but the determination and sentence of the law. BLACKSTONE *Comm.* bk. iii, p. 396.

(2) The obligation or debt created by the decision or verdict of a court, or the official certificate or record of such decision, which constitutes a lien on leviable property.

A *judgment* is stronger than a verdict. It is indeed the highest evidence of a debt; and as between the parties it is conclusive at common law.
PARSONS *Contracts* vol. ii, pt. ii, § 11, p. 671. [t. n. & co. 1860.]

4. *Psychol.* (1) The mental act or attitude of decision with which the process of observation, comparison, or ratiocination is formulated. This may also be distinguished from those *direct, immediate, or psychical judgments*, which are little more than habitual reactions, accompanied by recognition, to accustomed stimuli, up to the most deliberate *logical judgments*, at which the mind arrives only after a period of doubt, deliberation, and weighing of evidence. A true judgment, however, always possesses to some extent the following characteristics: (*a*) It is not a mere fusion or mere association of sensations or ideas; (*b*) it always involves a certain peculiar affective or emotional element, to which the term *belief* or *conviction* has been applied, inasmuch as the affirmation or denial is mentally held to represent the truth, as to some real object, event, or phase of reality; and (*c*) it always asserts an *activity* of consciousness, distinguishable from the power which we call will, whether in the form of simple recognition or of more deliberate pronouncement.

(2) Loosely, the comparative faculty or its exercise. See COMPARATIVE FACULTY. **5.** *Logic.* (1) That form of thought in which two terms are compared and their fitness to be joined or not joined in a given relation is affirmed or denied. (2) The result of judging, the verbal expression of which is called an assertion or proposition. See PROPOSITION.



The elements of logical judgment are (*a*) the comparison of two terms, (*b*) the relations that serve as means of comparison *and connection*, and (*c*) the act of affirmation or denial, as a form of knowledge. In common use or reason in judgment, which makes its conclusion *knowledge*, is found in the connecting link that binds the conceptions together. This connection may consist in one or more of several logical relations which really exist between things, such as substance and attribute, cause and effect, sign and thing signified, and numerous others. In connection with reasoning, the fundamental forms of judgment are *categorical* and *hypothetical, universal* and *particular, affirmative* and *negative*. See the adjectives. COMPARE IDENTITY; CONTRADICTION; LAW OF EXCLUDED MIDDLE; PRINCIPLE OF SUFFICIENT REASON.

6. A disaster or affliction regarded as inflicted by God as a punishment for sin. *v. Theol.* The final award or sentence of the human race.

In the order of events Christ placed the *Judgment* after the Resurrection.
J. P. THOMPSON *Theology of Christ* p. 206. [s. 1872.]

8†. Uprightness; rectitude. [< F. *jugement*, < LL. *judicamentum*, < L. *judico*; see JUDGE, v.]

Juno was worshiped as Regina as the queen of heaven, with the surname **Regina.** She was regarded as the genius of womanhood and watched over the female sex.

As **Virginensis** she protected maidenhood, and as **Cinxia, Domiduca, Juga** or **Jugalis, Pronuba Sospita,** or **Unxia** ushered womanhood through all the rites of marriage. She presided over wedded life as **Matrona,** and as **Lucina** helped in childbirth. She was also goddess of chastity. When the Romans began the coinage of money they set their mint in her temple on the Capitoline hill, and as **Juno Moneta** she became guardian of the finances. She was also goddess of the month and in this capacity the Kalends were sacred to her. In later Roman mythology she is identified as the passive productive principle applied again as typifying the earth, or as having the attributes of both Cybele and Ceres. She is usually represented as holding a sceptre in one hand, sometimes with a cuckoo at the top, and a pomegranate in the other. She was the emblem of fertility. The cuckoo and later the peacock were the birds sacred to her, the willow, pomegranate, dittany, and lily being her special plants. 2. *Astron.* The 3d asteroid. Ju'pi-ter, 1 jū'pi-tar; 2 jū'pi-ter. *n.* **1.** *Rom. Myth.* The supreme tutelary god of the Romans, who, especially in poetry, is known also as *Jove.* He gradually became identified with the Greek Zeus.

Jupiter. (Vercospi statue in the Vatican.)

Jupiter was worshiped as father or lord of heaven. As such he was god of rain (**Jupiter Pluvius**), of lightning (**J. Fulgurator** or **J. Fulminator**), of thunder (**J. Tonans** or **J. Tonitrualis**), and of serene skies (**J. Serenator**). All-powerful among the gods, he was called also **J. Optimus Maximus**, "the best and most high"; and as protector of Rome was worshiped in a temple described to him by the Tarquins, and erected on the lofty hill of the Capitol (begun by Tarquinius Priscus, 616 B. C.; completed by T. Superbus, 510 B. C.), whence he was called **J. Capitolinus** and **J. Tarpeius.** Under the first of these names he presided over the Roman games, and as **J. Latialis**, or **Latiaris**, over the Feriæ Latinæ. As the consuls worshiped him on assuming office, and as a solemn procession to his temple marked the triumph of victorious generals, he bore various other surnames, as **J. Imperator**, the ruler; **J. Invictus**, the unconquerable; **J. Optimus**, the helper; **J. Predator**, the giver of booty; **J. Stator**, the supporter; **J. Triumphator**, the bestower of triumph, and **J. Victor**, the conqueror. Under all these surnames Jupiter had statues or temples in Rome, two of which, that of Jupiter Stator and that of Jupiter Feretrius, were commonly believed to have been erected in the time of Romulus. As **Jupiter Fidius** he was the guardian of law, defender of truth, and protector of justice and virtue.

The Roman *Jupiter* was originally an elemental divinity, and his name signified the father or lord of heaven, being a contraction of Diovis pater, or Diespiter (Iranian *Ayura*—"the bright heaven"). SMITH *Small Classical Dict.* ed. by E. H. Blakeney, p. 293. [e. r. p., '10.]

I mean, that Zeus, the most sacred name in Greek mythology, is the same word as Dyaus in Sanskrit, Jovis or Ju in *Jupiter* in Latin, Tiw in Anglo-Saxon, preserved in Twisdæg, Tuesday, the day of the Eddic god Tyr; Zio in old High-German.

2. *Astron.* The greatest of the planets, and the largest body in the solar system, except the sun.

Its distance from the Sun is 483,000,000 miles, and is almost $^1/_{10\text{th}}$ of that of the sun. It is probably in great part *molten.* It revolves around the sun in about 11⅞ years, and at a mean distance from the sun of 483,000,000 miles. The planet is noted for its fleecy equatorial bands and for its various spots. It has eight satellites or moons, four having been discovered by Galileo in 1610, and the fifth by E. E. Barnard, at the Lick Observatory, Sept. 9, 1892, that of the 13th magnitude, having the shortest period (about 12 hours) of all. The sixth, seventh, and eighth are very faint and were discovered by photography, the sixth and seventh by Perrine at the Lick Observatory in 1905, and the eighth at Greenwich in 1908 by Melotte. These three also are very distant from Jupiter, and their periods are very long: that of the eighth is 739 days. See BELT. [L., < OL. *Jovis*, Jove, + *L. pater*, father.]

ju"ris-pru'dence, 1 jū"ris-prū'dens; 2 jū"ris-pru'dĕnc, *n. Law.* **1.** The philosophy of law and of legislation and its administration; the science by which the laws and constitutions of states, written or unwritten, are reduced to system, and their principles analyzed, methodized, expounded, and explained; the science of rights in accordance with positive law.

The difference between morality and *jurisprudence* as to extent of range, may be illustrated by the difference of signification between the word right, when used as an adjective and when used as a substantive. Morality contemplates all that is right in action and disposition; *jurisprudence* contemplates only that which one man has a right to from another.

K.-F. VON *Vesin. Philos.* p. 277. [tr. a. c. 1878.]

2. The laws, collectively, of a particular country, as a system; as, Roman *jurisprudence.* **3†.** The knowledge of law or skill in its practise. ju'ry, 1 jū'ri; 2 jū'ry, *n.* [F. JURER, 1 -RER; 2 -rĭs, *pl.*] **1.** *Law.* A body of adult persons possessing qualifications prescribed by law, summoned to attend a judicial tri-

bunal, and there sworn to try well and truly the issue joined between parties litigant in civil cases or the facts adduced for and against the accused in a criminal case, and to give a true verdict according to the evidence. They constitute a branch of the judicial power in common law, and in most of the United States, the word *jury* imports a jury of twelve men. In some of the States, as New York, the word *jury* in the Constitution does not mean less than a jury of twelve exclusively; a jury of six in a justice's court as prescribed by statute is a lawful jury. [62 *Barbour's N. Y. Sup. Ct. Rep.* p. 16.]

It had been a prevailing opinion, that trial by *jury* may be referred to the AngloSaxon age, and common tradition has ascribed it to the wisdom of Alfred . . . Of this, I suspect, we must also deprive him. HALLAM *Middle Ages* p. 325. [ir. 1854.]

The institution of the *jury* raises the people itself, or at least a class of citizens, to the bench of judges. DE TOCQUEVILLE *Democracy in Am.* tr. by Reeves, vol. i, p. 361. [s. & r. 1863.]

2. A committee of award in a competition or competitive exhibition. **3.** *Mil.* (1) The dicasts of ancient Athens. (2) The judges of ancient Rome. [< OF. *juree*, < LL. *jurata*, < l. *jurata*, f. pp. of *jurō*; see JURAT.]

—common jury, a jury drawn from the regular panel of from forty-eight to seventy-two persons, summoned to attend during a term of court; also, the panel itself.—**coroner's j.,** a jury called and sworn by a coroner to make inquiry concerning the manner or cause of death of a person found dead, or who is slain, or who dies suddenly, or in prison: also, in England, to inquire into shipwrecks and treasure-trove—**grand j.,** a jury called to hear complaints of the commission of offenses, and to inquire by aid of testimony whether there is *prima facie* ground for a criminal accusation. At common law a grand jury consisted of twenty-four persons, of whom twelve must agree; practically not fewer than twelve were to be sworn, so that twelve might be the majority necessary for a presentment. In the United States, grand juries differ in different States, twelve to twenty-three being the number adopted in most of the States, in others sixteen or seventeen; but in all at least twelve must concur in finding an indictment.—**hung j.,** a jury hopelessly unable to agree upon a verdict.—**Jedburgh j.** [Scot.], a jury under Jedburgh justice. See JEDBURGH JUSTICE, under JUSTICE, n.—**jury-box*,** *n.* The place in a courtroom assigned to the jury during a trial.—**j.-chancellor,** *n.* [Scot.] A foreman of a jury.—**j.-list,** *n.* The panel containing the names of persons who may be summoned as jurors.—**j.-man,** *n.* A man who serves as a juror; as, a grand *juryman*. **2.** *Gr. Antiq.* A dicast: a translator's error.—**j. of inquest,** a coroner's jury.—**j. of matrons,** a jury composed of twelve matrons or discreet women summoned, upon a writ de ventre inspiciendo, to determine whether a woman is pregnant who alleges herself to be so, either as a plea to stay execution of a criminal sentence, or where an execution has been awarded that may be intended in order to secure an estate.—**j. of the vicinage** (*Law*), a jury composed of residents of the county in which the cause is commenced: formerly, exclusively of residents of the immediate neighborhood.—**j.-process,** *n.* Formerly, in England, a writ of venire facias nisi prius for summoning a jury to the assizes; latterly, a writ of habeas juratorum.—**j.-wheel,** *n.* A device for selecting jurors by lot, consisting of a circular box wherein the names of persons to be drawn for duty are deposited and mingled by revolving the box.—**jū'ry-wo'man,** *n.* A woman of the class of matrons: also, a female member of a jury consisting of both men and women.—**petit or petty j.,** the traverse or trial jury; the jury that sits at a trial for settling matter of fact and determining questions of fact in civil and criminal cases.—**struck j.,** a jury specially selected under an order of court, usually by each party striking from a list of forty-eight eligible persons drawn by the sheriff twelve names, the remaining twenty-four being summoned as the panel from which the jury of twelve men is drawn.—**jū'ry-less,** *a.* Devoid of or unassisted by a jury.

jū'ry, *prefix.* Rigged up temporarily; makeshift: used in nautical compounds; as, *jury-mast*; *jury-rudder*; *jury-sail*. Surg.* An iron rod fixed in a plaster jacket used for supporting the weight of the head in spinal disease.—**j.-rigged,** *a.*

jus, 1 jūs; *l. law.* **1.** Right, in the abstract sense as distinguished from statute law; right; justice. **2.** Any right that is enforceable by law; as, *jus* possessionis, the right of possession. [L., law.]—**jus gentium,** the law of nations; the common right in the law of nations; in Roman law, the common ingredient in the laws of the Italian tribes.

The origin of the *jus gentium* was undoubtedly to befound in the adjustment of the Roman law to the relations existing between Roman citizens and foreigners, and between foreigners themselves. BOUVIER *Law Dict.* Rawle's revision, vol. ii, p. 76.

—**jus scriptum,** written or statute law. For jus abutendi, jus canonicum, jus propriætatis, etc., see FOREIGN PHRASES. The term *jus* occurs in combination with other Latin qualifying terms denoting particular law pertaining to Roman law. Others will be found defined under FOREIGN PHRASES in Appendix.

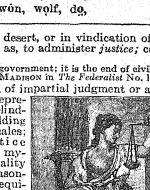
jus'tice†, *vt. & i.* To deal justice to; serve as a magistrate; bring to trial.

jus'tice, 1 jŭs'tĭs; 2 jŭs'tĭc, *n.* **1.** The quality of being **jus'tis,** 1 just; conformity in conduct or practice to the principles of right or of positive law, especially of the latter as distinguished from *equity*; strict uprightness; regard for just relations; honesty; practical rectitude in honesty; evidence in action of the possession of this quality or principle, one of the cardinal virtues; also, the body of principles by which actions are determined as right or wrong; as, he has no idea of *justice*. See JUSTICE, *equity*.

Plato defined ideal justice as "every part [of thestate] doing its own work and not interfering with the others." Aristotle made it consist in both its thought and its practice, the external operation of justice. The chief characteristics of this modification are two: (1) the universalizing of the conception (2) the introduction of the idea of proportion. Thus there has been brought about a constant and severe struggle between the growth of expectations and demands for justice on the one hand, and the dispositions and power to fulfill the expectations and satisfy the demands on the other hand. This has led some writers, as Sidgwick, to distinguish the normal expectations of justice as conduct, conservative justice, from ideal justice, which would exist in an ideal social organism desirable in itself but not existing *de facto*.



The word *justice*, or righteousness, is used in Scripture sometimes in a wider and sometimes in a more restricted sense. In theology it is often distinguished as justitia interna, or moral excellence and justitia externa, or rectitude of conduct.
C. HODGE *Systematic Theology* vol. i, p. 416. [s. 1872.]

Justice, therefore, let us say, is the treatment of persons according to their deserts. JAS. MARTINEAU *Types of Ethical Theory* vol. ii, p. 249. [MACM. 1891.]

2. Adherence to truth or fact; impartiality; fairness; as, the *justice* of a statement or report; the portrait does not do him *justice*. **3.** The rendering of what is merited, or the thing merited; reward or punishment allotted according to desert, or in vindication of law or right; just requital; as, to administer *justice;* courts of *justice*.

Justice is the end of government; it is the end of civil society.
MADISON in *The Federalist* No. ii, p. 241.

styled **Mr. Justice:** as, *Mr. Justice* Holmes. (3) A judge of the Supreme Court of Judicature in England; including the Master of the Rolls, the ex-officio members of the Court of Appeal. Members of this court are officially styled **Lord Justice;** as, *Lord Justice* Farwell. The term *justice* is applied in the United States also to judges of a superior court of record or of a common-law court.

7. Administration of law; the forms and processes by which it is made effective.

They were only called conservators . . . till the statute 34 Edw. III, c. 1, gave them the power of trying felonies; and then they acquired the more honourable appellation of *justices*.
BLACKSTONE *Commentaries* bk. i, p. 351.

8. Right of authority; also, formerly, jurisdiction or authority. **9.** *Theol.* One of God's attributes, by virtue of which he wills equal laws and metes out awards. **10†.** Exactness or precision; justness. **11†.** A member of a commission which formerly governed Ireland during the absence of the Lord Lieutenant. [F., < L. *justitia*, < *justus*; see JUST, *a.*]

SYN.: equity, fairness, fair play, faithfulness, honor, impartiality, integrity, justness, law, lawfulness, rectitude, right, righteousness, truth, uprightness, virtue, virtuousness. In its governmental relations, *justice* is the giving to every person exactly what he deserves; *equity* is giving every one as much advantage, privilege, or consideration as is given to any other; it is that which is equally right to all who are concerned; *equity* is equal *justice* and is thus a close synonym for *fairness* and *impartiality*, but it has a philosophical and legal precision that those words have not. In legal proceedings cases arise for which the *law* has not adequately provided, or in which general provisions, just in the main, would work individual hardship. The system of *equity*, developed to supply the insufficiencies of *law*, deals with cases "to which the *law* by reason of its universality can not apply." "*Equity*, then, . . . is the soul and spirit of all law; positive *law* is the carcass and rational *law* is made by it." BLACKSTONE bk. iii, ch. 27, p. 429. In personal and social relations *justice* is the rendering to every one what is due or merited, whether in act, word, or thought; in matters of reasoning, or literary work of any kind, *justice* is close, faithful, unprejudiced, and unbiased adherence to essential truth or fact; we speak of the *justice* of a statement, or of doing *justice* to a subject. Aside from special legal usage, *integrity*, *rectitude*, *right*, *righteousness*, and *virtue* denote conformity of personal conduct to the moral *law*, and thus necessarily include *justice*, which is giving others that which is their due. *Lawfulness* is an ambiguous word, meaning in its narrower sense mere legality, which may be very far from *justice*, but in its higher sense signifying accordance with the supreme *law of right*, and thus including perfect *justice*. *Justness* refers rather to logical relations than to practical matters; as, we speak of the *justness* of a statement or of a criticism. See TRUTH, n. ANT.: dishonesty, inequity, injustice, partiality, unfairness, unlawfulness, unreasonableness, untruth, wrong. PROP.: The *justice of the king; to or the* cause assessed.

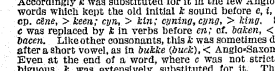
K



K k Roman. Black Letter. Script.

K, k, 1 kē; 2 kā, *n.* [KAYS, K's, or *Ks*, 1 kēz; 2 kāz, *pl.*] **1.** A letter: the eleventh in the English alphabet. It is always the sign of a voiceless guttural mute. See under C, also under G.

After Latin *c* had come to be used for the *k* sound only there was no need of *k* in the Latin alphabet, and it was kept only in certain abbreviations. Thus the letter *k* did not descend to the Romance alphabets or to Anglo-Saxon, which used *c* for the *k* sound just as the Romans had done. But when, in the Middle English period, *c* before a high vowel had acquired the sound of *s* or *sh* (cp. *cinder, ocean*) in many words of Latin origin, it became phonetically ambiguous. Accordingly *k* was substituted for it in the few Anglo-Saxon words which kept the old initial *k* sound before *e, i,* and *y*: cp. *dene, > kene; cyn, > kin; cuning, cyning, > king.* So also *c* was replaced by *k* in verbs before *en*: cf. *baken, < bacan, bacen.* Like other consonants, this *k* was sometimes doubled after a short vowel, as in *bakke (bacek), <* Anglo-Saxon *bacca.* Even at the end of a word, where *c* was not strictly ambiguous, *k* was extensively substituted for it. Thus *bæc* became *bak*; the two compounds might still be written *bæcward, bachon.* Gradually *ck* became established in place of *kk* (after a short vowel), and such is its function, when not final, in modern English. When final, as in *back, buck, stick,* it is a case of this unnecessary doubling which has been simplified in *music(k), traffic(k), public(k),* etc.

Capital K is from early Greek and Latin K < ⋋ < Phenician ⋋ < Egyptian hieratic 𓎛 hieroglyph 𓎛, a bowl. For lower case, black letter, script and dates see A.

In its simplest form it consists of two strips of blackened glass placed in a tube, so as to form two sides of a regular triangular prism. Any object, as a bit of colored glass, placed at one end appears to the observer at the other as six bits arranged at the angles of a hexagon. If the angle of the strips is a smaller aliquot part of 360° the number of the images is increased, and by multiplying the objects complex patterns are produced which change with every alteration of the position of the objects. Other varieties of the instrument are known as the polycentral and polyangular kaleidoscope, the hexastope, the tetrascope, etc. The figures produced are often very beautiful, and the instrument is employed to suggest decorative patterns.

ka'na, 1 kā'na; 2 kā'nä, *n.* [Jap.] Japanese writing. The Japanese language is not monosyllabic, but agglutinative, and has an alphabet of 47 letters, mainly written in two different forms, known as **fira-kana** and **kata-kana**. In addition there is a complete Sinography derived from Chinese consisting of about 350 Sinograms. As these are altogether ill suit the peculiarities of the Japanese language, Kibi-Ko (753) selected 47 Sinograms and simplified them into syllabic sounds. This syllabary was named **fira**, from the first 3 syllables. This *fira*, called the *kata-kana* (half letters), is used collaterally with Sinograms, explaining their sounds and serving for the indication of grammatical particles. This form is sometimes called the vulgar form. The syllabary called the *fira-kana* (expanded letters) was contrived by the celebrated bonzes, Comiu and Kobo (774–835), and to it a 48th sign for a nasal sound was added by a third bonze, Kukiuo. This is the cursive writing for daily transactions, sometimes called the writing of women. There are two other *trofas*, which are not so extensively used, called the **munyo-kana** and the **yamato-kana**. *Imperial Encyclopædia*.

Kant'i-an-ism, *l* kant'i-ə-niz'əm; 2 kănt'i-an-izm, *n.* The philosophical doctrine given by Immanuel Kant (1724–1804), especially as set forth in his *Critique of Pure Reason,* *Critique of Practical Reason,* and *Critique of Judgment,* called **critical philosophy,** as opposed to the dogmatism of the Wolfian school, the skepticism of Hume, associationalism, perceptionalism, etc. In approaching its study the utmost importance attaches itself to an understanding of the method and the final purpose of Kant. The method was that of a critical analysis and disursive treatment of the very constitution of human reason itself, with a view to test, in an ultimate and forever convincing way, the a priori conditions, limits, and authoritativeness of all the cognitive process. In this respect Kant compared himself to Copernicus, because he proposed for the first time to regard the known and knowable world of objects from the central or subjective point of view, as fixed by the *faculty* of knowledge, rather than by its *objects.* To the undertaking of this task he confesses that he owes the incitement of Hume, who awakened him "from his dogmatic slumber." The immediate and final purpose to have been the reconciliation of the conflicting claims of science and man's faith in God, freedom, and immortality, by removing the pretense of knowledge, where real knowledge was impossible.

In his greatest work, *Critique of Pure Reason* (1781), Kant first shows ("Transcendental Æsthetic") how all the "stuff" of sensation is organised into objects of perception under the a priori forms of space and time; then ("Transcendental Logic") how these perceptions are constituted into a system of related objects by the unifying *actus,* or synthesis, of imagination, and under the twelve constitutional forms of intellect in judgment, the categories (see CATEGORY); and, finally ("Transcendental Dialectic"), how the reason is led on into a realm of illusion, in its effort to demonstrate the existence of a real world, either absolutely limited or unlimited, either infinitely divisible or constituted of ultimate individibles, and the reality of its supreme ideal of God as absolute and infinite being. The conclusion is that this dialectic process is a discipline of reason rather than a means of cognizing reality. In the *Critique of Practical Reason* (1788) Kant reduces all morality to the obedience of a universal moral law, a categorical imperative, the keeping of which is demanded without consideration of conditions or consequences. The nature of this law, however, involves and justifies the practically indispensable beliefs in God, freedom, and immortality. In the *Critique of Judgment* (1790) it is shown that all our judgments of the useful and the beautiful are grounded in and it imply the a priori conception of purposiveness, and lead on to the idea of God, while the argument from the world of phenomena, as thus constituted, to God as designing mind, does not serve as a basis for knowledge, but authorizes and demands a religious faith.

The logical outcome of the Kantian criticism is undoubtedly a philosophical scepticism, altho there are not a few philosophers who have endeavored to show the contrary asseverations, on its authors part. As respects their agnosticism in limiting man's scientific knowledge of the real world of things, there is a not wholly reconcilable discrepancy between the strong affirmations contained in the *Critique of Pure Reason.* This difference led Schopenhauer to charge Kant with "hedging" in the second edition — a charge which at any rate finds its utter confirmation in patient elaboration of Kant. There are also admissions in the two later *Critiques* which it is impossible to bring into complete agreement with the uncompromising tone of the first work with regard to the impassable limitation of human knowledge. The truth, then, appears to be that, in spite of his years of unsurpassed patient reflection, this great philosopher never succeeded in clearing up entirely his own premises or the conclusions he derived from them.

Besides these three works, which justify the philosophical world in calling Kant the entire modern age, there are many with the name of Kant, we owe several other important treatises to him, in one of which he anticipated La Place's account of the nebular hypothesis of solar development. With the exception of Plato and Aristotle, probably no other thinker has had so enormous an influence on subsequent philosophy. It is stupefying to study that, not only friends as their predecessor, the opposing systems of Fichte, Hegel, Schelling, and Schopenhauer would not have come into existence. In *Kantianism,* as a system of critical philosophy, there are, however, two defenses which deeply affect the whole conception of man's cognitive faculty. First, the psychology of the process and the result of knowing was not only definitely formulated by Kant, but is still generally accepted; but its conclusions as a basis of criticism were not fully apprehended; and, second, the very nature of a so-called category was misconceived. ke'tab, 1 kē'tab; 2 kē'tăb, *n. Bib.* (Apocrypha, R. V.).

ke'tate, 1 kē'tāt; 2 kē'tāt, *n. Chem.* Any ketonic ether of the general formula $RR_1C(OR)_2$.

ke'tax-ine, 1 kī'tak-sin, -zin *or* -zĭn; 2 kē'ta-zĭn, -zĭn *or* -zĭn, **ke'ta-zine,** *n. Org. Chem.* Any crystalline compound obtained by the action of hydrazin on ketones and having the general formula $R_2C_2N_2H_2$. **KETAZONE.** [< KETONE + AZOTA.]

ketch, 1 kech; 2 kĕch, *vt.* [Colloq., Eng.] To hang.

ketch, *n.* [Dial. or Obs.] To catch. **ketcher.**

ketch, *n.* A sloop-rigged vessel, formerly partly square-rigged forward, and often mounting mortars or guns for naval warfare, now fore-and-aft rigged in a manner similar to a yawl, save that the mizzenmast in the ketch is far forward of the rudder-post. [< Turk. *qtiq*, boat.] — **ketch'craft",** *n.* The craft or sailing of Jack Ketch; the hangman's calling.

ketch'-a, 1 kĕch'-a; 2 kĕch'-ă, *n.* [Eng.] A hangman: Jack Ketch.

Ketch'e, 1 kech'e; 2 kĕch'e, *n.* Same as ST. NEOT.

ketch'up, *n.* Same as CATCHUP. [*ketchy* weather.

ketch'y, 1 kech'i; 2 kĕch'y, *a.* [Local, U. S.] Changeable; as, **ketch'y-ketch'y,** 1 kech'-yech'; 2 kĕch'-yĕch', *n.* A small pleasure craft, having two masts and three fore-and-aft sails, the mainsail being smaller than the foresail and the jib resting on a slump bowsprit.

ke'tene, 1 kī'tēn; 2 kē'tēn, *n. Org. Chem.* A pungent, colorless gas ($H_2C{:}CO$), obtained by decomposing acetone, ethyl acetate, or acetic anhydrid with intense heat.

Keth'er, 1 kech'er; 2 kĕth'er, *n. Occult.* See SEPHIRA.

ke-thib', *n.* Same as K'THIBH.

Keth'i-bim, 1 kedh'i-bim; 2 kĕth'ĭ-bĭm, *n. pl.* [Heb.] The third section of the Scriptures after the Law and the Prophets.

ke'tim, 1 kī'tin, -tin *or* -tĭn; 2 kē'tĭn, -tĭn *or* -tĭn, *n. Chem.* **ke'tine,** *j* One of a series of unstable oily organic compounds ($(CH_2N)_2$ with an aromatic odor, acting like bases, obtained by the reduction of certain isonitroso compounds of the ketones.

ke-tip'le, 1 ki-tip'li; 2 ke-tip'le, *a. Chem.* Denoting a colorless, amorphous, rather unstable acid ($COOH.CH_2{:}COCO$ $CH_2{:}COOH$).

ket'mi-a, 1 ket'mi-a; 2 kĕt'mi-a, *n. Bot.* 1. A plant of the genus *Hibiscus*; as, bladder-*ketmia*, the flower-of-an-hour (*Hibiscus trionum*). **2†.** [K-] The genus *Hibiscus*: Adanson's name. **ket'mie.**

ke'to-, 1 kī'to-; 2 kē'to-. A combining form indicating in organic chemistry the presence of the ketone group; as, *ketobenzene*.—**ke'to-al'de-hyde,** *n.* Any compound containing both the carbonyl (CO) and aldehyde (CHO) groups.—**ke'to-hex'ose,** *n. Org. Chem.* See HEXOSE.

ke'tol, 1 kī'tol *or* -tel; 2 kē'tŏl *or* -tĕl, *n. Chem.* **1.** One of a series of organic nitrogenous compounds; as, methyl *ketol*. **2.** Same as INDOL. [< KETONE + INDOL.]

ke'tone, 1 kī'tōn; 2 kē'tōn, *n.* One of a class of organic compounds in which the group monovalent (CO) unites two alcohol radicals. It is usually derived by removing the group hydroxyl (OH) from the group carboxyl (COOH), and replacing it with an alcohol radical. In this way from acetic acid ($CH_3.CO.OH$) is derived acetone ($CH_3.CO.CH_3$). The principal ketones, besides acetone, are propiu, ethyl butyral, butyrone and benzophenone. [Arbitrary var. of ACETONE.]—**ke'tone-al'co-hol,** *n.* Any compound containing both the ketone group (CO) and the alcohol group (OH). [< KETONE + ALCOHOL.]—**ketone acid,** a compound containing the group carbonyl (CO) and having the characteristic properties of both a ketone and an acid, as pyroracemic acid.

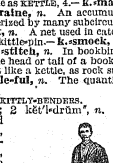
ke'to-nim'id, 1 kī'to-nim'id, -id *or* -ĭd; 2 kē'to-nim'id, **ke'to-nim'ide,** -id *or* -ĭd, *n. Org. Chem.* 1. Any compound in which the ketone group unites two amid groups. **2.** Any compound containing both the carbonyl of the ketone and the imido group. [< KETONE + IMID.]

ke'tose, 1 kī'tōs; 2 kē'tōs, *n. Chem.* A sugar or a class of sugars having the same chemical constition as ketone alcohol, as fruit-sugar. See ALDOSE. [< KETONE.]

ke-tox'im, 1 kī-teks'im; 2 kē-tŏks'ĭm, *n. Chem.* Any compound derived from a ketone and hydroxylamin. **ke-tox'-imet.**

Ket'te-ler, 1 ket'a-ler; 2 kĕt'e-ler, *n.* **1. Klemens, Baron von** (1/21853–9/21900), a German diplomat; assassinated in Peking, June 16, 1900. **2. Wilhelm Emanuel, Baron von** (13/21811–7/11877), a German ultramontane; writer; bishop of Mentz.

Ket'ter-ing, 1 ket'er-ing; 2 kĕt'er-ing, *n.* An urban district and ancient market-town in Northamptonshire, England.



ket'tle, 1 ket'l; 2 kĕt'l, *n.* **1.** A metallic cooking-vessel, of various forms, for stewing or boiling; a tasketle or vessel with a spout, for heating water; a pot. **2.** [Local, U. S.] A tin pail. **3.** *Brewing.* A pear-shaped copper vessel,

used for boiling malt wort with hops for the purpose of coagulating albumens, sterilizing, concentrating, and imparting to the whole a taste and aroma of hops. **4.** A hole in the bottom of a river or pond where carp lie in winter. **5.** *Geol.* (1) A kettle-shaped cavity in rock, sand, gravel, etc. (2) The mass of consolidated material, generally shale or sandstone, which often fills a kettle-hole in the shape of an inverted cone. **6.** [*cap.*] *Mining.* A shallow tub used for *transporting miners* and material up and down the shaft. **7.** *Naut.* The metal box enclosing a compass. **8.** The contents of a kettle, or the amount cooked in it at a time. **9.** A kettledrum. [< A.S. *cetel*, perhaps < L. *catillus*, dim. of *catinus*, deep vessel.]

—a pretty kettle of fish, a confused or perplexing state of affairs.—**ket'tle-shall'n,** *n.* [Local, U. S.] A dredge for catching scallops, the blade of which is so swung that it can not sink in the mud.—**k.-boiler,** *n.* An old-fashioned steam boiler with a round top.—**k.-bottom,** *n.* **1.** *Naut.* A seagoing craft having a flat floor. **2.** [Rare.] A hill having a contour like that of an upturned kettle. **3.** See CALDRON-BOTTOM.—**k.-bread,** *n.* Homemade bread baked under a kettle or pot, and used by farmers.—**k.-broth,** *n.* A broth made of scale bread well moistened with boiling water and seasoned with pepper and salt.—**k.-case,** *n.* The cuckoo-orchis (*Orchis mascula*).—**k.-dock,** *n.* The European ragweed (*Senecio jacobæa*). **2.** The bitter dock (*Rumex obtusifolius*).—**k.-hat,** *n.* A helmet of the 14th century.—**k.-hole,** *n.* **1.** See *Geol.*, 4. **2.** Any deep-seated or irregular depression in stratified or partially stratified glacial deposits or between ramées or oskers: it is generally steep-sided, and without surface drainage. **3.** Same as KETTLE, 4.—**k.-man,** *n.* Same as ANGLER, 2.—**k.-moraine,** *n.* An accumulation of morainal material characterized by many subcircular bowl-shaped depressions. **2.** A net used in catching mackerel.—**k.-pin,** *n.* A skittle-pin.—**k.-smock,** *n.* [Prov. Eng.] A smock-frock.—**k.-stitch,** *n.* In bookbinding, the knotted chainstitch at the head or tail of a book.—**ket'tle-a,** *Geol.* Hollowed-out basins, like a kettle, in rock surfaces by glacial scouring.—**ket'tle-ful,** *n.* The quantity that a kettle will hold.

ket'tle-and'ver, *n.* Same as KETTLY-BENDERS.

ket'tle-drum', 1 ket'i-drum"; 2 ket'l-drŭm", *n.* A musical instrument, now used chiefly in orchestras in pairs, consisting of a brass hemispherical shell with a parchment head, tuned by stretchers usually to the tonic and dominant, and sounded by soft-headed classic drumsticks.

(2) A tightening wedge, as for finding a collar on a shaft, or a split pin or forelock for insertion in the slot of a bolt to prevent its being drawn, or a wedge in a chair to prevent slipping; a cotter. (3) A bolt or pin for fastening the frame of a gun-carriage to the check. **5.** *Masonry.* A keystone. **6.** *Carp.* (1) A piece inserted in a board transversely to the grain, to prevent warping, or a wedging-piece used for holding or finishing something, as a tenon in a mortise. (2) A flooring-board tapered in width and driven in last to bind the others in place. **7.** The roughness on the unfinished face that gives a stronger adherence to glue in veneers. **8.** *Print.* An instrument for opening and closing the blades in furnaquoins. **9.** Any one of various small tools used in bookbinding for holding bands while sewing sections of books together. **10.** A pin in a joint of a rod that supports tools and rides in vertical guides. **11.** *Pottery.* Sand for the mortar extruded between laths, under the pressure of the trowel, and binding the plastering to the laths. **12.** A holding dovetail or groove in a tile, or in a terra-cotta ornament, for inserting mortar in building. **13.** In musical instruments of the organ and pianoforte type, one of the levers by which the player operates the mechanism to produce the notes; in wind instruments, one of the small metal levers by which the holes are covered or uncovered to modify the vibrations of the air-column. **14.** Any one of the operating finger-pieces in typewriting-machines and some typesetting-machines. **15.** *Elec. A.* In telegraphy, a device operated by the fingers. **16.** *Teleph. & Teleg.* A lever by means of which a signaling or talking circuit can be readily opened or closed. **17.** *Mus.* (1) Any one of various families or systems of tones in the scale of which the component members, two or of different absolute pitch from the corresponding members of other keys, have the same musical relations among themselves.

Each has seven principal tones to the octave, called diatonic tones. These are named, without reference to their absolute pitch, according to their harmonic relations to the key: the harmonic unity of the tones is called the *tone* or *key-note* (from which the key always takes its name), the *supertonic*, the *mediant*, the *subdominant*, the *dominant*, the *submediant*, and the *leading tone* or *subtonic*. In singing and instrumental music they are also called *do, re, mi, fa, sol, la, si*; while temporary members (chromatic tones) have such designations as *sharp one* (which is the tone sharped), *flat seven*, *double-sharp four*, *sharp four*, etc. The terms *key-tone, key-note, tonic, one, do*, all designate the first or fundamental tone of the key. All these names are distinct from the absolute pitch names, A, B, C, etc., C, for instance, being the tonic of one key, the dominant of another, and so on. The key is the largest of the tone families. All other families, as chords, intervals, and scales, are within the system of some key and are composed of its members. The keys commonly in use, that can be played on an ordinary keyboard instrument, with their signatures, are shown in the first column.

(2) The relation existing between the tones in such a system; tonality. (3) Key-tone or key-note; tonic; as use may generally be followed. Keyboard.

In a piano or organ-keyboard, the keys that sound notes in the diatonic scale of C are white, while the remainder are black. The black keys are made shorter and slightly raised, there being five to each octave, and usually from six to seven octaves in a piano-keyboard. Pipe-organs have a keyboard for the hands, called a *manual keyboard*, often arranged in banks, and one for the feet, called a *pedal keyboard*. Illustrations in further part of an ordinary piano- or organ-keyboard, with the names of the keys. Owing to the fact that the sharps and flats are not really identical, no instrument with a keyboard like this can ever be quite in tune. — REMOTE KEY.

— **Janko keyboard,** a piano-keyboard invented in 1882 by Paul von Janko, having six rows of keys arranged in step-like succession, so that the fingers of one row bring a whole tone apart. The fingering of all diatonic scales is the same, and chromatic scales are played by taking notes alternately on any two rows, a tenth is the same stretch as an octave in an ordinary piano.

The advantage Herr von Janko claims for his *keyboard* is a freer use of the fingers than in the accepted keyboard.

kind†, *vt.* To beget.

kind, 1 kaind; 2 kīnd, *a.* **1.** Sympathetic and affectionate in disposition or conduct, as toward those of the same family; having tenderness or goodness of nature; benevolently or beneficently disposed; benignant.

A '*kind*' person is one who acknowledges his kinship with other men, and acts upon it; confesses that he owes to them, as of one blood with himself, the debt of love.
TRENCH *On the Study of Words* lect. iii, p. 95. [K. P. & CO. 1888.]

2. Characterized by or springing from kindness; marked by sympathetic feeling; prompted by kindness; sympathetic; humane; tender.

Kind hearts are more than coronets, and simple faith than Norman blood. TENNYSON *Lady Clara Vere de Vere* st. 7.

3. Manifesting kindness; genial or agreeable; favorable; kindly; as, a *kind* season; a *kind*, refreshing sleep. **4.** Gentle or tractable; as, a horse *kind* in harness. **5†.** Characteristic of or peculiar to a genus or species; characteristic; native; also, having the feelings befitting a common nature: the origin of the present common meanings. [< AS. *gecynde*, < *ge-* (generalizing) + *-cund*, born, < *cennan*, bring forth.] Syn.: see ACCOMMODATING; AMICABLE, CHARITABLE; FRIENDLY; HUMANE; PLEASANT; PROPITIOUS. The expression *kind of* in the sense of *somewhat* is incorrect, and much more its corruption *kinder*.

— **kind'-heart"ed,** *a.* Having a kind and sympathetic nature.— **k.-heartedness,** *n.*— **k.-spoken,** *a.* **1.** Spoken kindly; as, a *kind-spoken* appeal. **2.** [Colloq.] Given to kindly speech; as, a *kind-spoken* man.— **k.-tempered,** *a.* Of a mild or gentle temper; as, *kind-tempered* weather.— **k.-witted†,** *a.*

kind, *n.* **1.** The nature or constitution of a person or thing, whether generic or specific; essential or distinguishing quality; sort: often with *of*; as, circumstances of this *kind* are rare; what *kind* of man is he? **2.** A number of persons or things of the same character; a logical class; a genus or species; sort; as, men of our *kind*. **3.** A modification or variety of a given sort of thing; a species, especially as somewhat indefinitely conceived or described; as, a *kind* of house; a *kind* of animal. In this use *kind* does not require the indefinite article before the following noun. Not "What *kind of a* man is he?" but "What *kind of* man." Not "It is a *kind of an* animal," but "A *kind of* animal." **4.** Hence, rarely, a specific mode of operation; specific manner or method; way; as, we must work in one *kind* or other. **5.** *Eccl.* One of the elements of the eucharist; as, communion under both kinds. **6.** In Mill's system of logic, a class, either real, as a class of animals, or unreal, as a class of black substances. **7†.** Nature in general, or natural disposition. **8†.** Parentage; descent. [< AS. *gecynd*, < *ge-* (generalizing) + *-cund*, born, < *cennan*, bring forth.] Syn.: see KIN.

— **in a kind,** after a fashion; in some sort.— **in k.** **1.** With something of the same sort; as, to repay a blow *in kind*. **2.** Specif., in produce instead of money: as, to pay taxes *in kind*.— **k. of** [Colloq.], somewhat; in some mode, measure, or degree: used adverbially with adjectives, and even sometimes with verbs; as, he is *kind of* cross this morning; he *kind of* swore at me: dialectically corrupted into *kinder*.— **out of k.,** altered, or degenerated from the original.

Kind, 1 kint; 2 kĭnt, **Johann Friedrich** (3/4 1768–6/25 1843). A German poet, dramatist, and novelist.

Flax soon *kindles*, soon is out again.
JOHN WEBSTER *White Devil* act iii, sc. 3.

2. To grow excited or become fired; be roused.

His young fancy *kindled* at the idea of knowing all the adventures of this venerable chair.
HAWTHORNE *Grandfather's Chair* p. 12. [T. & F. 1868.]

3. To become bright or illumined. [< Ice. *kyndill*, candle, < L. *candela*; see CANDLE.] Syn.: see BURN.

— **kin'dle-fire"†,** *n.* An inciter of strife. **k.-coal†.**

kin'dle[2], *vt. & vi.* [Prov. Eng. or Obs.] To give birth to; bring forth young.— **kin'dle,** *n.* Progeny; litter; young. **kin'dling‡.**— **in kindle,** with young, as a rabbit.

kin'dler, 1 kin'dlər; 2 kĭn'dler, *n.* **1.** One who or that which kindles, illumines, or animates. **2.** [Local, U. S.] A piece of light wood or artificial composition used in kindling fires.

kind'less†, *a.* [Rare.] Heartless.— **kind'less-ly,** *adv.*

kind'li-ly, 1 kaind'lɪ-lɪ; 2 kīnd'li-ly, *adv.* In a kindly fashion.

kind'li-ness, 1 kaind'lɪ-nes; 2 kīnd'li-nĕs, *n.* **1.** The quality of being kind; kindly disposition. **2.** Mildness, as of climate or season.

kin'dling[1], 1 kin'dlɪŋ; 2 kĭn'dling, *n.* **1.** The material with which a fire is kindled, as small pieces of wood: often in the plural. **2.** The act of starting a fire, or causing to burn.— **kin'dling-coal",** *n.* A piece of burning coal or other material used for lighting a fire.— **k.-wood,** *n.* Dry wood cut fine for use as kindling.— **kin'dling-ly,** *adv.*

kin'dling[2], *n.* A brood of young; as, a *kindling* of hares.

kind'ly, 1 kaind'lɪ; 2 kīnd'ly, *a.* [KIND'LI-ER; KIND'LI-EST.] **1.** Having or manifesting kindness, good will, or sympathy; good-natured; benevolent; as, a *kindly* person; a *kindly* act. **2.** Having a favorable or grateful effect; beneficial; refreshing; as, *kindly* sunshine. **3.** *Mining.* Giving evidence of being of good mineral value. **4.** [Archaic.] Proper to its kind; natural; native; akin.

That it may please Thee to give and preserve to our use the *kindly* fruits of the earth. *Book of Common Prayer, Litany.*

Syn.: see FRIENDLY; PROPITIOUS.

— **kindly tenant** (*Scots Law*), a tenant living on land long occupied by his ancestors.

kind'ly, *adv.* **1.** In a kind manner or spirit; good-naturedly; benevolently; tenderly; hence, favorably.

We have all much to learn: let us try and teach one another as *kindly* as we can. CHAS. READE *Griffith Gaunt* p. 84. [H.]

2. With good will; good-naturedly; congenially; as, I do not take it *kindly* of you that you have done this. **3.** *Pathol.* By the first intention; benignantly; as, the wound healed *kindly*. **4.** Heartily; as, I thank you *kindly*. **5†.** By nature; naturally.

kind'ness, 1 kaind'nes, 2 kīnd'nĕs, *n.* **1.** The state or quality of being kind, in any sense, good will; humaneness; tenderness. **2.** A kind act; token of good will and friendliness; favor, as, to show one a *kindness*.

The plural form *kindnesses* is sometimes objected to on the ground that *kindness* is an abstract noun. Nothing is commoner than the making of abstract nouns into concrete in this way; "affinities"; "charities"; "His tender *mercies* are over all His works." By "many *kindnesses*" is meant, not "much kindness," nor "great kindness," but "kindness manifested in many forms or shown on many occasions, many acts of kindness." Compare EVERY CONFIDENCE, under EVERY, *a.*

3. A feeling of liking, affection, or love.

Unless people are more than commonly disagreeable, it is my foolish habit to contract a *kindness* for them. HAWTHORNE *Scarlet Letter, Custom House* p. 31. [H. M. & CO. 1889.]

4. [Rare.] Naturalness; congruity. **5†.** A natural right or birthright; state of a kindly tenant. **6†.** Kinship; natural aptitude. Syn.: see BENEVOLENCE; FAVOR; LENITY; MERCY.

kin'dred, 1 kin'dred; 2 kĭn'drĕd, *a.* **1.** Of a like nature or character; congenial; sympathetic; as, *kindred* spirits. **2.** Of, pertaining to, or having ties of blood or nature; akin; native; as, *kindred* people; *kindred* cities. Syn.: akin, allied, cognate, kin, related. See ALIKE.

kin'dred, *n.* **1.** Relationship by ties of blood, or, less properly, by marriage; consanguinity; kinship.

When the Jews prosper, ye claim *kindred* with them.
LONGFELLOW *Judas Maccabæus* act i, sc. 2.

2. Collectively, relatives by blood, as of a family or tribe; also, less properly, relatives by marriage; kin. **3.** Affinity by common origin or indirect likeness.

Old events have modern meanings; only that survives
Of past history which finds *kindred* in all hearts and lives.
LOWELL *Mahmood the Image-Breaker* st. 1.

4. A body of people connected by kinship; a tribe; clan.

Thou . . . hast redeemed us . . . out of every *kindred*, and tongue, and people, and nation. *Rev.* v, 9.

[ME. *kinrede*, < AS. *cynn*, kin, + *ræden*, state.]

Syn.: kin, kinsfolk, kinsmen, relations, relatives. *Kin* and *kindred* are used to denote both relationship and the persons related. For the former sense, see synonyms under KIN. There are no true antonyms except the phrases made by the use of a negative, since strangers, aliens, or foreigners may still be *kindred*. Compare FAMILY.— **kin'dred-less,** *a.* Without kindred.— **kin'dred-ly,** *adv.* Cognately.— **kin'dred-ness,** *n.* Kinship.— **kin'dred-ship,** *n.* Kinship.

kine[1], 1 kain; 2 kīn, *n.* [Archaic.] Plural of cow. [< AS. *cȳ*, pl. of *cū*, cow.]

kine[2], *n.* In the C. G. S. system, the proposed unit of velocity; one centimeter a second. [< Gr. *kineō*, move.]

kin'e-ma-col"or, 1 kin'ɪ-mə-kul"ər; 2 kĭn'e-ma-cŏl"or, *n.* A method of producing moving pictures in the original colors by means of revolving color screens.

kin"e-mat'ic, 1 kin"ɪ-mat'ɪk; 2 kĭn"e-măt'ic (XIII). **I.** *a.* Of or pertaining to kinematics. **kin"e-mat'i-cal‡.** **II.** *n.* Same as KINEMATICS. [< Gr. *kinēma(t-)*, movement, < *kineō*, move.] **cin"e-mat'ic‡.**— **kinematic curves,** curves produced mechanically by a combination of circular motions. — **kin"e-mat'i-cal-ly,** *adv.*

kin"e-mat'ics, 1 kin"ɪ-mat'ɪks; 2 kĭn"e-măt'ics, *n.* *Physics.* The branch of mechanics that treats of the motion of bodies as limited only by the properties of space, and without reference to the action of forces: in usage frequently limited to **applied kinematics,** the science of the change of one kind of motion into another, as of reciprocating into rotary motion. **cin"e-mat'ics‡.**

kin"e-mat'o-graph, *v. & n.* Same as CINEMATOGRAPH.

kin"e-mom'e-ter, 1 kin"ɪ-mem'ɪ-tər; 2 kĭn"e-mŏm'e-ter, *n.* *Mech.* A delicate highly sensitive tachometer. [< Gr. *kinēma*, motion, + -METER.]

kin'e-neg"a-tiv(e[S], 1 kin'ɪ-neg"ə-tiv; 2 kĭn'e-nĕg"a-tĭv, *n.* *Phot.* The film negative produced by means of a cinematographic camera. [< Gr. *kineō*, move; and see NEGATIVE.]

kin'e-o-graph, 1 kin'ɪ-o-graf; 2 kĭn'e-o-grăf, *n.* A motion picture, as that shown by the kinetoscope. [< Gr. *kineō*, move, + *graphō*, write.]

kine'pox", 1 kain'peks"; 2 kīn'pŏks", *n.* Same as cow-[POX.

kin"e-sal'gi-a, 1 kin"ɪ-sal'jɪ-ə; 2 kĭn"e-săl'ġi-a, *n.* *Pathol.* Pain from muscular exertion. [< KINES- + Gr. *algos*, pain.]

kin'e-scope, 1 kin'ɪ-skōp; 2 kĭn'e-scōp, *n.* Same as KINETOSCOPE, 1.

ki-ne'si-, kin'es-, 1 kɪ-nī'sɪ-, kin'es-; 2 ki-nē'si-, kĭn'ĕs-. Derived from Greek *kinēsis*, movement (< *kineō*, move): combining forms.— **ki-ne"si-at'ric,** *a.* Of or pertaining to kinesitherapy.— **ki-ne"si-at'rics,** *n.* Same as KINESITHERAPY.— **ki-ne"si-es-the"si-om'e-ter,** *n.* An instrument for testing or measuring the muscular sense.— **ki-ne'si-graph,** *n.* *Phot.* A photographic apparatus used to take pictures of moving objects.— **kin"e-sim'e-ter,** *n.* **1.** *Physiol.* An instrument to measure cuticular sense of heat or cold. **2.** An apparatus for measuring movement, quantitatively.— **ki-ne"si-ol'o-gy,** *n.* The science of muscular movement, especially as employed in the practice of kinesitherapy.— **ki-ne"si-om'e-ter,** *n.* Same as KINESIMETER.— **ki-ne"si-o-neu-ro'sis,** *n.* *Pathol.* A nervous disease accompanied by disordered action of the musculature. — **ki-ne'si-path,** *n.* Same as KINESIPATHIST.— **kin"e-sip'a-thist,** *n.* A practitioner or adherent of kinesipathy.— **kin"e-sip'a-thy,** *n.* Same as KINESITHERAPY.— **ki-ne"si-path'ic,** *a.*— **ki-ne'sis,** *n.* Physical movement in the external world. See METAKINESIS.— **ki-ne'si-scope,** *n.* An instrument placed at the sea-bottom to detect electrically the approach of steamships.— **ki-ne"si-ther'a-py,** *n.* *Therap.* A mode of treating disease by muscular movements; movement-cure.— **kin"e-sod'ic,** *a.* **1.** Conveying motor impulses: said especially of the spinal cord. **2.** Originative rather than receptive: said of nerve-tracts and centers which convey or give origin to centrifugal impulses.

kin"es-the'si-a, 1 kin"es-thī'sɪ-ə; 2 kĭn"ĕs-thē'si-a, *n.* The perception of muscular movement. [< Gr. *kineō*, move, + *aisthēsis*, perception, < *aisthanomai*, perceive.] **kin"æs-the'si-a‡; kin"æs-the'sis‡; kin"es-the'sis‡.**

kin"es-thet'ic, 1 kin"es-thet'ɪk; 2 kĭn"ĕs-thĕt'ic, *a.* Pertaining to kinesthesia. **kin"æs-thet'ic‡.**

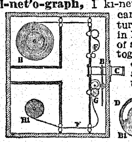
ki-net'ic, 1 kɪ-net'ɪk; 2 ki-nĕt'ic, *a.* **1.** Producing motion; motor. **2.** Consisting in or depending upon motion; active: opposed to *latent* or *potential*; as, *kinetic* energy. [< Gr. *kinētikos*, < *kineō*, move.]

— **kinetic energy,** see ENERGY, 4.— **k. theory,** any theory of the constitution of bodies which explains their properties by the motion of their particles, especially that theory of gases according to which their elasticity is due to the rapid motion of their molecules, which dart about in straight lines with an average velocity that increases with the temperature until deflected by encounters with one another or with the walls of the containing vessel. This theory has been found capable of explaining nearly all the phenomena of gases, and is now generally accepted. Under ordinary conditions the molecules of air are thought to move approximately with the speed of a rifle-bullet when it leaves the rifle.

ki-net'ic, *n.* Same as KINETICS.

ki-net'i-cal, 1 kɪ-net'ɪ-kəl; 2 ki-nĕt'i-cal, *a.* Of or pertaining to kinetics; as, *kinetical* problems.— **-ly,** *adv.*

ki-net'ics, 1 kɪ-net'ɪks; 2 ki-nĕt'ics, *n. pl.* The branch of dynamics that treats of the production or modification of motion in bodies; opposed to *statics*. Compare DYNAMICS.



ki-net'o-, 1 kɪ-net'o- *or* kɪ-nī'to-; 2 ki-nĕt'o- *or* ki-nē'to-. Derived from Gr. *kinētos*, moving (< *kineō*, move): a combining form. The first pronunciation given has become established in good usage, altho orthoepists have heretofore recognized only the second, which conforms to etymology.

ki-net'o-cam"e-ra, 1 kɪ-net'o-kam"ɪ-rə; 2 ki-net'o-căm"e-ra, *n.* *Phot.* A camera for producing motion-pictures. See CINEMATOGRAPH.

ki-net"o-gen'e-sis, 1 kɪ-net"o-jen'ɪ-sis; 2 ki-nĕt"o-ġĕn'e-sĭs, *n.* *Biol.* The theory that all structures, as teeth, bone, and muscle, originated or have become developed by kinetic or mechanical means; also, origin by such means.

ki-net'o-gram, 1 kɪ-net'o-gram; 2 ki-nĕt'o-grăm, *n.* The photograph of a moving object taken by a kinetograph. [< KINETO- + Gr. *gramma*, letter.]

ki-net'o-graph, 1 kɪ-net'o-graf; 2 ki-nĕt'o-grăf, *n.* A camera for producing motion-pictures. The form invented and named in 1889 by Thomas A. Edison consists of a light-tight box containing a photographic lens, *C*, a rotary shutter, *B*, of which *B*[1] is a front view, having an opening, *D*, mechanism *G* for unrolling the film *F* from the reel *H* and transferring it to the reel *H*[1] by feeding it down behind the lens with a step-by-step motion. The whole mechanism is operated by an exterior crank and is so arranged that the film is momentarily arrested behind the lens at the instant that the opening in the shutter is in line with the latter, thus producing an exposure, after which it is moved on a little way in readiness for the next exposure, and so on. As many as 45 exposures per second have been taken, but 16 is the usual number, the films averaging 1,000 feet in length.— **kin"e-tog'ra-pher,** *n.* A person skilled in the art of kinetography.— **ki-net"o-graph'ic,** *a.* Pertaining to a kineto-

Edison Kinetograph.

graph.—**kin"e-tog'ra-phy,** *n.* The art of taking motion-pictures.

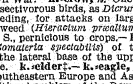
ki-net'o-phone, *n.* An instrument combining the functions of a phonograph and a kinetoscope.—**ki-ne-to'pho-no-graph,** *n.* A combined phonograph and kinetograph.

ki-net'o-scope, [< Gr. κίνητος, moved, + σκοπεῖν (xim), *v.* **1.** An instrument for illustrating the production of kinematic curves by the combination of circular movements of different radii. **2.** A device by which the pictures taken by the kinetograph may be illustrated successively to the eye, thus effecting a visual reproduction of the motions originally photographed. In the early form of this instrument, as invented by Thomas A. Edison, these pictures were viewed through a peephole, but the improved type now throws them as large-sized projections upon a screen. See MOTION PICTURE, under MOTION. **3.** [Rare.] A kind of panorama.—**ki-net"o-scop'ic,** *a.*

ki-net"o-sco'to-scope, [ki-net'o-scó-skōp; 2 ki-nēt'o-scó'to-scōp, *n.* An apparatus designed to show the motions of the bones of the body.

kin'-fen'nel [< kin*g*-fenn*el*; 2 kin'-*g*rung', *n.* Gold lacquer in powdered form. [< Jap. *kimpun.*]

king, [kiŋ; 2 kĭng, *n.* [Rare.] **1.** To make a king of; invest with royalty; enthrone. **2.** To furnish with a king.—**to king it,** to play the king; assume royal dignity.



king'ı, *n.* **1.** The sovereign male ruler of a kingdom.

Originally, among the Germanic and Latin races, the office of king was elective, but in time it came to be generally hereditary. The name is loosely applied, irrespective of the manner of appointment, to chiefs and rulers of various classes, as those of Israel, of African and American tribes, or of Ireland. The Supreme Being is also called *King.*

All the Aryan nations set out, as far as we can see, with very much the same kind of government. There was a *King* or chief as the head; there was a small Council of nobles or old men, and there was a general Assembly of the whole people.
E. A. FREEMAN, *General Sketch* p. 103. [n. s. & o.]

2. One who or that which is preeminent among others of the same kind or class; as, a railway *king;* chess is the *king* of games. **3.** A playing-card bearing the picture of a king; as, the *king* of hearts. **4.** In chess, the piece for whose ultimate defense all the moves of the other pieces are made; shaped like a king's crown. It may move one square at a time in any direction. See CASTLE, *n.*, CHECKMATE, *n.*; CHESS, *n.* **5.** In checkers, a piece that by regular moves has reached the adversary's king-row, and has thereby gained the right to be moved both backward and forward instead of forward only. **6.** A conical pin used formerly in billiards. **7.** A perfect female bee: former term for a queen bee. **king bee,** **8.** *pl.* [K-] *Script.* The 11th and 12th books of the Old Testament, called 1 Kings and 2 Kings, containing the history of the kings of Israel and Judah. kite¹, *n.* 1. A medium-sized falconoid bird having long pointed wings, no tooth to the bill, and a forked tail.

The Swallow-tailed Kite (*Elanoides forficatus*).

The **European kite** or **glede** (*Milvus ictinus*) is of a prevailing reddish-brown with a forked tail of light-red feathers barred with brown, and is noted for its soaring flight. The **black k.** (*M. migrans*) is another European species. The **black-winged swallow-tailed k.** (*Elanoides forficatus*), the **white-tailed k.** (*Elanus leucurus*), the **Mississippi k.** (*Ictinia mississippiensis*), and the **everglade k.** (*Rostrhamus sociabilis*), found in Florida and far southward in American latitudes, all kites feed largely upon small reptiles and insects and also capture young birds and mammals; while some species, especially the *Milvus govinda* of India, are notorious scavengers. They are all remarkable for their faculty of sailing and wheeling about, and for their graceful flight.

It seems a rather strange reason to give to place the true *kites* in the same *subfamily* with the great sea eagles, but in spite of obvious external differences the anatomical characters seem to warrant placing them together. Indeed the same thing the extreme forms are connected by others of intermediate characters.
KNOWLTON & RINGWAY *Birds of the World* p. 234. [N. Y., a. c. 90.].

2. A device, usually a toy, made of paper or other light material pasted on a slender wooden frame, to be flown in the air by means of a cord, usually having a tail attached for the purpose of balancing it.

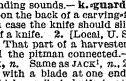
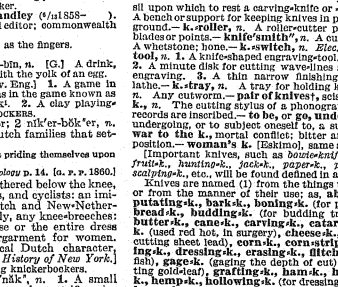
HALLAM *Middle Ages* p. 514. [*c.* 1854.]



Such terms as *knight bannaret*, *knight baronet*, *knight companion*, and *knight templar* are to be considered as compounds. In the plural each word takes the inflection: as, *knights templars*, etc. In *knight errant* the second word is an adjective, and the term means 'errant knight.' Some of the English terms of these kinds have been often erroneously treated as compounds, *knight-errant* being particularly frequent in print. There are not compounds, the adjective property of qualifying its noun as a superlative, and the composition of two nouns having a similar effect as to relative force, but attributing a named office, rank, or the like, instead of quality or character.



2. [*Gt. Brit.*] The holder of a dignity or title of honor next below that of baronet.

The title, originally a military distinction, has been conferred since the 16th century as a reward for personal merit or for services rendered the crown or the country. It entitles the recipient to prefix *Sir* to his Christian name, and his wife is legally called *Dame*, the *Lady* is by courtesy her common designation. Knights who belong to no special order of knighthood are properly knights bachelors: those belonging to an order take the name of such order, as Knight of the Garter or Bath. The rank is not hereditary.

The word is used also humorously in various phrases denoting companion: as, **knight of the shears** (a tailor); **k. of the tar-brush** (a sailor).

know, 1 nō; 2 nō, *v.* [knew; known; know'ing.] **I.** *t.* **1.** To perceive or understand, with clearness and certainty, whether of fact or truth; apprehend as clear and certain in a looser sense, to believe in, as the true; cognize: usually with a substantive clause as object.

To know, is to be certain that something is. . . . Subjectively viewed, to *know*, involves certainty; objectively considered, truth.

Foster *Human Intellect* prelim. § 3, p. 64. [s. 1868.]

2. *Psychol.* In a strict sense, to perceive (an object), apprehend (a truth), or think (a thought) in such a manner as to produce the conviction, on grounds of evidence, that the mental attitude of the subject correctly represents objective or extramental facts and relations; in a broad sense, all the activities of the mind enter into the completed process of *knowing*. Volition is elemental in the directing of attention, the control of the train of thought, and the holding, developing, and expression. Various subtle and fundamental feelings, such as accompany and in a measure assist and guide the intellect, are also elements of every process of knowing; but especially to be noted is the belief or conviction that what we intimately *know exists in fact*, or is really true. However much debate there may be as to the nature, grounds, and validity of this belief, therefore, it is as a subjective state essential to every act of knowledge.

It should be noted that though we propose to regard all *knowing* as relative, we do not accept all the meanings of Hegel.

G. F. Stout *Analytic Psychol.* vol. i, p. 98. [sos. & co., 1896.]

Now the *relation of knowing* is the most mysterious thing in the world.

Wm. James *Prin. of Psychol.* vol. i, p. 216. [h. h. & co. 1890.]

3. To be thoroughly acquainted with; be well versed in; understand; specif., to be familiar with the exact word for word; as, to *know* grammar; to *know* a poem.

Endeavor to *know* thyself, which is the most difficult study of all others.

Cervantes *Don Quixote* tr. by Jervas, pt. ii, p. 590. [p. & c.]

4. To have information or intelligence of by observation or hearsay; as, do you *know* where John is? **5.** To recognize, either upon memory or from description; be acquainted with; as, I *know* you not. **6.** To recognize by making comparisons concerning; distinguish; as, to *know* a friend from an enemy. **7.** Archaic. To experience sexually. [Gen. xix, 8; Judg. xxi, 12.] To take notice of; care for; protect. *Gen.* xxxix, 6.

II. *i.* **1.** To have knowledge; be informed: sometimes with *of*; as, do you *know of* any good fishing near here? **2.** To get knowledge; seek knowledge; acquire experience or information; as, *know* thoroughly before you choose. **3**†. To be acquainted. [< AS. *cnāwan*, know.]

Syn.: apprehend, ascertain, be acquainted with, be assured, be aware, be certain, be sure, cognize, comprehend, discern, discover, discriminate, distinguish, experience, have acquaintance with, have knowledge of, *learn*, make sure of, perceive, realize, recognize, understand.

Learn. Compare synonyms for ignorant.— Prep.: to know by experience; to know from memory; to know *of* or *about* the matter; know right *from* wrong; know *by* or *under* the name of.— **I know not what**, a phrase used to express indefiniteness in making a computation; as, it amounted to *I know not what*.— **I want to k.** Colloq., New Eng.], is it possible! used to express surprise.— **not that I k. of**, not to my knowledge.— **not to k. B from a bull's a**—, to be extremely ignorant.— **to be known**, to be a slight resemblance to the letter B.— **to k. how**, to have the necessary information, intelligence, or understanding.— **to k. of**, to have knowledge of; be informed.— **to k. on**, to be acquainted with the method of procedure in any business, or the ways of a house.— **to k. the time of day**, same as to know what's o'clock.— **to know up**, to search, as for **what's what** [Colloq.], to be shrewd and well-advised; to understand the spirit and motives of modern times.— **know-a-bi(e)**, *a.* + **know'a-bil-i-ty**, **know'a-bi(e-ness**, *n.*, **know'a-bly**, *adv.*— **know'ing**, *n.* Knowledge.

know†, *n.* Knowledge.

know'all", 1 nō'ōl'; 2 nō'ōl", *n.* [Colloq.] One who knows a great deal; pretense of knowing; a wiseacre; an ironical term.— **know'it-all"**, *a.* & *n.*

Junius *Letters* vol. i, letter lxviii, p. 403. [h. g. b. 1850.]

3. Done consciously or on purpose; as, a *knowing* act. **4.** [Colloq.] Stylish; as, a *knowing* turnout.

Syn.: acute, astute, clever, cunning, discerning, intelligent, keen, penetrating, sagacious, sharp, shrewd. A *knowing* look, air, etc., indicates practical knowledge with a touch of shrewdness, and perhaps of cunning; in regard to some special matter; it indicates the possession of reserved knowledge which the person could impart if he chose. *Knowing* has often a slightly invidious sense. We speak of a *knowing* rascal, meaning *cunning* or *shrewd* within a narrow range, but of a *knowing* horse or dog, in the sense of *sagacious*, implying that he knows more than is commonly expected of such an animal. A *knowing* child has more knowledge than would be looked for at his years, perhaps more than is quite desirable, while to speak of a child as *intelligent* is altogether complimentary. See astute; clever; intelligent.— Ant.: dull, gullible, senseless, silly, simple, stolid, stupid, undiscerning, unintelligent.

know'ing-ly, 1 nō'ing-li; 2 nō'ĭng-ly, *adv.* **1.** With knowledge; understandingly; intentionally. **2.** Shrewdly; astutely; as, he looked up *knowingly*.

know'ing-ness, 1 nō'ing-nes; 2 nō'ĭng-nĕs, *n.* **1.** The state of having knowledge. **2.** Pretense to knowledge.

It is this gnosis, or *knowingness*, which the Apostle says puffeth up—not knowledge, as we translate it.

Coleridge *Table Talk* June 6, 1830.

knowl, 1 nōl; 2 nōl, *n.* [Prov. Eng.] A knoll.

knowl'edge†, *v.* **1.** *t.* To avow; acknowledge. **II.** *i.* To make acknowledgment.

knowl'edge, 1 nol'ej; 2 nŏl'ĕdj, *n.* **1.** A result or product of knowing; that which is known. Specif.: (1) Any fact or truth, or the aggregate of facts, truths, and principles, known, acquired or retained by the mind; information respecting phenomena, causes, laws, or principles; learning; scholarship; as, his *knowledge* is encyclopedic; Sir William Hamilton's *knowledge* of philosophy was wonderful.

All our *knowledge* must ultimately repose on propositions which are unproved and unprovable.

Mivart *Nature and Thought* p. 45. [k. p. & co. 1882.]

Knowledge is of two kinds. We know a subject ourselves or we know where we can find information upon it.

Samuel Johnson *Life of Addison* (1770).

(2) Practical understanding or skill in anything; familiar acquaintance derived from practise or experience; as, Washington had a good *knowledge* of farming.

2. In strict sense, the clear and certain apprehension of truth, or the agreement of thought with thing; the conviction or assurance, arising from proper evidence, that a mental apprehension corresponds with reality or that which it represents; assured rational conviction. See evidence.

Here, again, the result can be called *knowledge* only upon the supposition that this is produced in the mind after the process of reasoning have something far other than mere correctness of form. G. T. Ladd *Phil. of Knowledge* p. 154. [s. 1897.]

3. The act, process, or power of knowing; cognition; as, man has a capacity for *knowledge*, emotion, and volition; memory is a form of *knowledge*. Knowledge derived from apperception by the senses is known as **sensitive knowledge**, **immediate k.**, or **perception**, while that derived from abstract processes of reasoning is called **abstractive k.**, **intellective k.**, **k. about**, and **representative k.**, and that which is derived from physical and economic social relations has been called **dynamic k.** See cognitive faculty; intellect; perception. **4.** Any object of knowing; a cognition; a thought. Specif.: (1) That which is or may be known; the knowable; as, the branches of *knowledge*. In this sense human knowledge may be classified as (*a*) *science*, (*b*) *art*, and (*c*) *literature*. See these words. (2) *Actual or possible* range of information; scope of view; as, if it be a fact, it is not in my *knowledge*; the future is beyond our *knowledge*.

There is no need to tell [as about insanity, for so many curious things happen within the *knowledge* of a man whose business it is to hunt. Haggard *King Solomon's Mines* p. 38. [s. 1887.]

5. Specific information; notification; notice. **6.** [Archaic.] Sexual intercourse. [ME. *knowlege*, < known (< AS. *cnāwan*), know, + -*lec*, -*ship*, suff. forming abstract nouns.] **knowledge's**, *n.* Plural of knowledge.

Syn.: acquaintance, apprehension, cognition, cognizance, comprehension, erudition, experience, information, intelligence, intuition, learning, light, lore, perception, recognition, scholarship, science, wisdom. *Knowledge* is all that the mind knows, *from whatever source derived or obtained, or by whatever process*; the aggregate of facts, truths, or principles acquired or retained by the mind. *Information* is the *intuitions* native to the mind and all that has been learned respecting phenomena, causes, laws, principles, literature, etc. There is a *knowledge* of many degrees from accurate and systematic, and to a certain degree complete. We say of a studious man that he has a great store of *knowledge*, or of an intelligent man of the day that he has a great deal of *information*. *Lore* is used only in poetic or elevated style, for accumulated *knowledge*, as of a people or age, or in a special sense for *learning* or *erudition*. We speak of *perception* of external objects, *apprehension* of intellectual truth. Simple *perception* gives a limited *knowledge* of external objects, merely as such: the *cognition* of the same subjects is a *knowledge* of them in some relation; *cognizance* is the formal or official *recognition* of something as an object of *knowledge*; we take *cognizance* of it. *Intuition* is primary *knowledge* antecedent to all teaching or reasoning; *experience* is *knowledge* that has entered directly into one's own life; as a child's *experience* that fire will burn. *Information* is *knowledge* of fact, or supposed fact, derived from persons, books, etc., or observation, and is regarded as timely and haphazard. *Learning* is higher than *information*, being wide and systematic *knowledge* gained by long study; *erudition* is recondite *learning* secured by extraordinary assiduity, opportunity, and ability. See acquaintance; science; wisdom.— Ant.: ignorance, illiteracy, inexperience, misapprehension, misconception, misunderstanding, nescience, unlearning.

— **Cartesian knowledge**, knowledge that has no mixture of sensuous elements; knowledge of pure intellect, in contrast to knowledge of sense.— **experimental k.**, intuitive **k.**, that in which the assurance is based on self-evidence and becomes absolute certainty. See intuition.— **know'ledge-box**", *n.* [Slang.] The head.— **probable k.**, that in which the assurance is based upon other than self-evidence, leaves room for doubt, and falls short of absolute certainty.— **theory of k.** (*Philos.*), the complete systematic exposition of the ultimate principles that lie at the basis of all knowledge: gnosiology: epistemology.— to **take k. of**, to recognize; notice; acknowledge.

L, **l**, 1 ĕl; 2 ĕl, *n.* [ELS, L's or *Ls*, 1 ĕlz; 2 ĕls, pl.] **1.** A letter: the twelfth in the English alphabet. Like *r*, *l* is often called a 'liquid'. Its sound is made by bringing the tip of the tongue into contact with the upper teeth or adjacent gum and allowing the speech-current to play past the edges of the tongue, the lips being held well apart and the vocal cords made to vibrate. As *l* is no complete stoppage of the current, *l* is called an 'open' consonant, in distinction from the 'shut' consonants *p*, *t*, *k*, etc. As the current is not forced through a narrow aperture enough to produce a 'fricative' or rubbing effect, *l* is called a 'sonorous' consonant.

Different languages have different kinds of *l*, according as the point of contact is higher or lower and the tongue more or less concave. If the contact is made by the sides of the concave tongue and the current is sent through the trough over the tip of the tongue, we get the ordinary English lingual *r*, as in *red*. Some languages, as Chinese, have no *r* and substitute *l* for it: *Mellican* for *American*. Sometimes *l* passes into *l*; cp. Latin *lacruma* from earlier *dacruma*. In modern English *l* is apt to be silent after a low *a* and before a consonant in the same syllable; cp. *calm*, *walk*.

Like the other 'sonorous' consonants (*m*, *n*, *r*), *l* may have the value of a vowel and form a syllable. Syllable *l* is heard in *battle*, while *battling* has the ordinary consonantal *l*. Historically syllable *l* comes from the reduction of unaccented *-al*, *-el*, *-ol*, *-ul*, through *-le* as an intermediate stage, to a mere vocal murmur. Phonetidians denote it by *l* with a diacritic mark ('l, 'l, or the like). In Key 1 of this Dictionary it is denoted by simple l and the difference between this *l* of *battle* and the ordinary *l* is ignored.

The liquids *l*, *r*, are among the most frequent sounds in English, *l* being first of all, 7.44, *l* eighth, 3.84 per cent. of the sounds in the poems of Tennyson (according to PROF. W. D. WHITNEY *Oriental and Linguistic Studies* second series, ch. 8, p. 274. [n. 1874.]

Capital L is from Latin L, < Early Gr. and L. ⅁, ⅂, < Phenician ↙, < Egyptian hieratic ⌐𓎛, < hieroglyphic 𓃀. The Egyptian hieroglyph represented a lioness, the Phenician letter was called *lamedh*, < Egyptian Greek *lambda*; the Anglo-Saxon futhorc has the name *laȝu*, lake, the 21st letter. Other words beginning with these prefixes will be found in alphabetical place, either singly or in groups.

lab"y-rin'thi-dæ, 1 lab"ı-rın'thı-dē; 2 lăb"ı-rĭn'thı-dē, *a.* 1. Like a labyrinth; complicated; mazy; labyrinthine. 2. *Zool.* Same as LABYRINTHODONT. [< L. *labyrinthicus*, < *labyrinthus*; see LABYRINTH.] **lab'y-rin'thi-cal**†.—**lab'y-rin'thi-cal-ly**, *adv.*

Lab'y-rin'thi-ci, *n. pl. Ich.* The *Anabantidæ*.—**lab'y-rin'thi-form**, *a.* 1. Having the form or intricacy of a labyrinth; intricate. 2. *Ich.* Having gills like the *Labyrinthici*.

lab"y-rin'thine, 1 lab"ı-rın'thın; 2 lăb"ı-rĭn'thĭn, *a.* Of, pertaining to, or like a labyrinth; mazy; involved; perplexing. **lab'y-rin'thial**†; **lab'y-rin'thian**†; **lab'y-rin'thic-an**†.—**lab'y-rin'thi-al-ly**, *adv.*

lab'y-rinth-i'tis, *n.* Inflammation of the labyrinth of the internal ear.—**lab'y-rin'tho-don**, *n. Herp.* 1. A labyrinthodont. 2. [L–] A genus typical of *Labyrinthodontidæ*.—**lab'y-rin'tho-don'ta**. A division of amphibians of the order *Stegocephali*, which are distinguished by a peculiar infolding of the enamel of the tooth forming labyrinthine convolutions. They existed from the Carboniferous to the Triassic, when they attained enormous size. The remains are largely fragmentary. **Lab'y-rin'tho-don'ta**.—**lab'y-rin'tho-don'ti-an**, *a.* & *n.* Labyrinthodont.—**lab'y-rin'tho-don'ti-dæ**, *n. pl. Herp.* The *Mastodonsauridæ*.—**lab'y-rin'tho-don'tid**, *a.* & *n.*—**lab'y-rin'tho-don'toid**, *a.* & *n.*

Labyrinthodont. One-fourth of a tooth, in cross-section of *Mastodonsaurus giganteus*.

Lab'y-rin'thu-la, 1 lab'ı-rın'thu-lə; 2 lăb'ı-rĭn'thŭ-lə, *n. Zool.* A marine organism of disputed relationship composed of nucleated protoplasmic masses in a network of branched and anastomosing threads.—**Lab"y-rin-thu'le-æ**, *n. pl.* A supernamily group named for the genus *Labyrinthula*.—**Lab"y-rin-thu'le-an**, *n. pl.* The *Labyrinthula* as a family.

Lab"y-rin'thu-lid'e-a, 1 lab"ı-rın'thu-lid'ı-ə; 2 lăb"ı-rĭn'thŭ-lĭd'ē-ə, *n. pl. Protoz.* A class or other division of gymnomyxans, forming irregular heaps of ovoid nucleated cells whose protoplasm extends as a labyrinth of fine threads. [< *L. labyrinthus*; see LABYRINTH.]—**lab"y-rin'thu-lid'e-an**, *a.*

lab"y-rin'thus, 1 lab"ı-rın'thus; 2 lăb"ı-rĭn'thŭs, *n.* [-rin, 1 -thəi; 2 -thĭ, *pl.*] [L.] A labyrinth, especially that of the ear.

lac, 1 lak; 2 lăc, *n.* 1. A resinous substance exuded from the scale-insect Indian scale-insect (*Coccus* or *Carteria lacca*). It consists of a granular substance forming cells for the shelter of the eggs of the insect and incrusting the twigs of various East-Indian trees. The females are embedded in the mass, and their ovaries contain the coloring matter, crimson and scarlet dyes, which is dissolved out of the stick- or seed-lac, leaving the shellac of commerce. The gum is much used in making varnishes, lacquers, sealing-wax, stiffening for hat-bodies, etc.

2. A similar exudation from other scale-insects. 3. The fresh or inspissated sap of certain trees or plants, as of the *Rhus vernicifera* of Japan, used in making lacquer. 4. Lacquer; as, coral *lac*; gold *lac*. [< Per. *lak*, < Sans. *lākh*, *lac*-insect, <*lakṣha*, hundred thousand.] *lac'ca*†; **lack**†; **lacquer**†.—**blue lac**, Indian red, *n.*, 2.—**scarlet lac**, **lac-dæcet**, *n.* A scale-insect producing lac-dye: specif., *Coccus* or *Carteria lacca*.—**lac-lake**, *n.* The artists' crimson or scarlet pigment obtained from *lac*.—**lac-sumac**, *n.* Same as LACQUER-TREE.—**lac-varnish**, *n.* Same as LAC-RESIN.—**lac-wash**, *n.* Varnished woodwork; lacquerwork.—**Mexican lac**, the inspissated sap of *Croton draco*.—**seed-lac**, *n.* The encrusted scale-insects separate from the twigs.

lac†, *n.* [Anglo-Ind.] Same as LAKH.

lac†, *n.* [L.] *Pharm.* Milk; especially, the fresh milk of the cow as used in medicine and dietary: also, a solution in milk. In the names of certain mixtures and compounds resembling milk; as, *lac ammoniati*, milk of ammonia; *lac argenti*, milk of silver precipitated silver chloride.—**lac albuminate**. Dun. **L. A. C.**, *abbr.* Licentiate of the Apothecaries' Company; London.

CHART OF HAND-MADE LACES.

EXPLANATION.

In this chart asterisks indicate the group to which the lace belongs and the country in which it is made. For example, reading horizontally, we find that *Albissola* refers to *aloe, plaited,* and *reticella* laces; whereas, reading perpendicularly under *aloe,* we see that Italy, Spain, and the Philippine Islands make *aloe* laces.

La-cer'ta, 1 lə-sŭr'tə; 2 la-çēr'ta, *n.* [L.] *Herp.* **1.** A genus of lizards typical of *Lacertidæ*. It comprises over 20 species, restricted to the Old World, including the green lizard (*L. viridis*) and the common lizard (*L. vivipara*), both of Europe and Asia. **2.** [l-] A lizard, especially of the genus *Lacerta*.— **la-cer'ti-an. I.** *a.* Lizard-like. **II.** *n.* One of the *Lacertilia*.— **La-cer'ti-dæ,** *n. pl.* *Herp.* A family of lizards, especially *Lacertoidea*, having the parietal bones confluent, the premaxillaries single, and no osteodermal plates; typical lizards. Including about 100 Old World species, it forms, with related species, the suborder *Lacertæ*, which contains all the *Lacertilia*, except the *Chamæleontidæ* and *Gecconidæ*.— **la-cer'tid,** *n.*— **la-cer'ti-form,** *a.* Having the form of a lizard.— **Lac"er-til'i-a,** *n. pl.* An order of the subclass *Sauria*, the lizards, characterized by the fact that the right and left halves of the mandibles are connected by a natural symphysis. The group is of recent origin. The great majority of existing lizards are small, have well-developed limbs, movable eyelids, and a coat of scales formed in the skin and covered by a thin horny epidermis. Some, however, have nearly or wholly lost their limbs, become serpentiform, and otherwise degraded in structure, and relegated to a burrowing mode of life. They are distributed throughout the warmer regions of the earth, but abound most in the tropics, especially in arid, rocky regions. There are three suborders, embracing: (*a*) the geckos; (*b*) the typical lizards; (*c*) the chameleons.

> The majority of the *Autosauri* [*Lacertilia*] are terrestrial, but there are also semi-aquatic forms. There are climbing, swiftly running, and even flying forms, while others lead a subterranean life like earthworms. . . . According to diet, the teeth and the whole digestive tract are modified. The intestine is relatively short in the carnivorous, long in the herbivorous species. But swiftness, the apparatus necessary for climbing, running and digging, the mechanism of the tongue, the armament, and the muscles of the jaws . . . stand also in correlation with the kind of food and with the way in which it has to be procured.

Words beginning with this prefix will be found in alphabetical place, either simply or in compounds.

lac'tic, 1 lak'tik; 2 lăc'tic, *a. Chem.* Of, pertaining to, or derived from milk. [< L. *lact(-),* milk.]— **lactic acid,** a limpid sirupy compound ($C_3H_6O_3$) with a very bitter taste, contained in sour milk, produced by fermentation, and in many compounds: it may also be produced synthetically. It is official in the United States and British Pharmacopœias, and is used in diseases pertaining to the digestion. *Sarcolactic* (*paralactic*) and *ethylene lactic* acids are isomers found in muscular tissue. The antidote for poisoning by lactic acid is oily drinks.— **L. bacillus,** a bacillus which promotes lactic fermentation. See LACTOBACILLINE.— **L. ferment,** an organized ferment (*Bacterium lacticum* or *lactis*) which produces lactic acid from carbohydrates, as milk-sugar that results in the formation of lactic acid and carbon dioxid known as *lactic fermentation.*

lac'ti-cin'i-um, *n.* [L] *Eccles. Milk, or food made of milk.*

— lac'tid, lac'tide, 1 lak'tid; 2 lăc'tĭd, *n. Chem.* A crystalline compound ($C_6H_8O_4$) obtained by the dry distillation of lactic acid.— **lac-tif'er-ous,** *a.* **1.** Conveying or containing milk or milky fluid; lacteal. **2.** *Bot.* Having milky juice.— **lac-tif'ic,** *a.* Yielding a milky juice, as a plant; lactescent.— **lactiferous tissue,** tissue characterized by latex-bearing tubes or vessels.— **lac-tif'er-ous-ness,** *n.*— **lac-tif'ic-ness,** *n.* Quality of producing milk. **lac-tif'i-ca‡.— lac'ti-fi-ca'tion†, *n.*— lac'ti-fi'er-ous,** *a.* [Rare.] *Bot.* Having milk-white flowers.— **lac'ti-fy'ing-ness,** *n.* Quality of making milky juice.— **lac'ti-fuge,** *n. Med.* A medicine which checks the flow of milk.— **lac-tif'u-gal,** *a.*— **lac'ti-fy,** *n.* [-FIED; -FY'ING.] Tochange through lactic fermentation; as, *lactifying* bacteria.— **lac-tig'e-nous,** *a.* Promoting the secretion of milk. **lac'ti-gen'te‡.— lac'tim,** *n. Chem.* An organic anhydrid in which the eliminated molecule of water (H_2O) is derived from the oxygen (O) of carboxyl (COOH) and the hydrogen (H) from the amidogen group.— **lac-tim'id, lac-tim'ide,** *n. Chem.* A colorless crystalline amid produced by heating lactamic acid in a sealed tube.— **lac-tim'ic,** *a.* [Rare.] Subsisting on milk.

lac'to-, 1 lak'tō-; 2 lăc'tō-. From L. *lac (lact-),* milk: a combining form.— **lac'to-al-bu'min,** *n. Chem.* Albumin as found in milk. **lact'a-ta-bu'min‡.— lac'to-ba-cil'line,** *n.* A ferment prepared from the culture of a microbe producing lactic acid, as prepared by Prof. Elie Metchnikoff for use in souring milk to be consumed by invalids suffering from impaired digestion.— **lac'to-bi-on'ic,** *a. Chem.* Designating — lactose derivative ($C_{24}H_{46}O_{24}$).— **lac'to-bi'ose,** *n.* Same as LACTOSE.— **lac'to-bu'tyr-om'e-ter,** *n.* An instrument for determining the proportion of butter in samples of milk.— **lac'to-cele,** *n. Med.* A swelling as a result of abnormal collection of milk in a milk-bearing duct; a milk-tumor. — **lac'to-cho'lin,** *n. Chem.* A combination of ethyldiene lactic acid with choloidic. **lac'to-cho'line‡.— lac'to-chrome,** *n.* A coloring-substance of nitrogenous nature, presumably existing in milk.— **lac'to-crite,** *n.* An apparatus which so separates the fatty matter from a sample of milk as *to determine the proportion of butter;* a kind of lactobutyrometer.— **lac'to-den-sim'e-ter,** *n.* A hydrometer with two scales on its spindle, arranged so as to indicate the density of pure milk and skimmed milk respectively, and used to determine the proportion of cream that has been removed from milk by skimming.— **lac'to-glob'u-lin,** *n.* **1.** Same as LACTO-ALBUMIN. **2.** A proteid derived from the early secretion of the mammary glands; the colostrum. **3.** A proteid contained in cow's milk.

Other words beginning with this prefix will be found in alphabetical place, either singly or in groups.

lac'tol, 1 lak'tōl; *or* -tol; 2 lăc'tōl *or* -tŏl, *n. Chem.* A colorless, tasteless *s*-naphthol ester of lactic acid, employed as an intestinal antiseptic.— **lac'to-lase,** *n. Chem.* A vegetable ferment apparently causing the formation of lactic acid in anaerobic fermentation.

lac-tom'e-ter, 1 lak-tom'ı-tėr; 2 lăc-tŏm'e-ter, *n.* Any instrument for determining the density of milk, particularly a hydrometer with a scale ranging from 1.000 to 1.029; a galactometer.

Another style of *lactometer* . . . is known as the New York Board of Health *lactometer.* . . . Its graduations are from 10 to 120. The instrument stands at 100 in milk having a specific gravity of 1.029, and it would stand at 0, if graduated to that point in a fluid having the specific gravity of 1.

Cyclopedia of Am. Agriculture vol. iii, p. 181. [MACM. '08.]

[< LACTO- + -METER.] **— lac'to-met'ric,** *a.*— **lac-tom'e-try,** *n.*

lac'tone, 1 lak'tōn; 2 lăc'tōn, *n. Chem.* 1. One of a class of organic anhydrids in which the molecule of water is derived from hydroxyl (HO) and carboxyl (COOH), both contained in the same radical, with the etherification of the acid part by the other part. **2.** A colorless volatile liquid ($C_3H_4O_2$) with an aromatic odor produced by the dry distillation of lactic acid. [< L. *lact(-),* milk; + -ONE, as in *acetone,* etc., of, pertaining to, or derived from lactose.— **lactonic acid,** a crystalline compound ($C_6H_{12}O_7$) obtained by oxidizing galactose or lactose.

lac'to-pep'sin, *n. Chem.* A yellowish-white mixture of pepsin and other substances, used in medicine as a peptic, proteolytic and amylolytic. **lactated pepsin†.— lac'to-phe'nin,** *n. Chem.* A crystalline compound obtained by the action of lactic acid on phenetidin in the presence of oxidizing agents, and used in medicine as an antipyretic and sedative. **lac'to-phe'nine‡; lactyl phenetidin‡.— lac'to-phos'phate,** *n. Chem.* Any combination of lactic and phosphoric acids.— **lac'to-pro'te-id,** *n.* A proteid derived from milk. — **lac'to-pro'te-in,** *n.* A proteid compound contained in milk.— **Lac'to-ri-da'ce-æ,** *n. pl. Bot.* A family of apetalous plants of the order *Campanulales,* constituted by the genus *Lactoris.* The only species, *L. fernandeziana,* is a small shrub having jointed branches, thick leaves, a trimerous perianth, and a capsular fruit with several seeds. It is found wild only in the island of Juan Fernandez.— **lac'to-ri-da'ceous,** *a.*— **Lac-to'ris,** *n. Bot.* See LACTORIDACEÆ.

lac'tos'ce-ous, 1 lak-tŏs'ē-ŭs; 2 lăc-tŏs'ē-ŭs, *a.* Milky; resembling milk.

lac'to-scope, 1 lak'to-skōp; 2 lăc'to-scōp, *n.* An instrument for determining the purity or richness of milk by its degree of translucency. [< LACTO- + -SCOPE.]

lac'tose, 1 lak'tōs; 2 lăc'tōs, *n. Chem.* Milk-sugar; lactobiose; lactin. [< LACTO-.]

lac'to-scu'rum, 1 lak'to-sē'rŭm; 2 lăc'to-sē'rŭm, *n.* A serum prepared by immunization with milk, and containing coagulins corresponding to the albumins of the milk and to others of the body of the animal.

lac'to-sin, 1 lak'to-sin; 2 lăc'to-sin, *n. Chem.* A colorless, crystalline, dextrorotatory, non-reducing substance, $C_{36}H_{62}O_{31}$, occurring in the root of the *Silene cucubalus.* **lac'to-sim'i-ter‡.— lac'to-su'ri-a,** *n. Pathol.* The presence of milk-sugar in the urine.— **lac'to-ther-mom'e-ter,** *n.* An instrument for measuring the temperature of milk.— **lac'to-tox'in,** *n.* A ptomain found in milk that is identical with the tyrotoxicon in cheese.— **lac'to-vis-com'e-ter,** *n.* An instrument for measuring the viscosity of milk by the speed with which it will traverse a capillary tube.

Lac-tu'ca, 1 lak-tū'kȧ; 2 lăc-tū'cȧ, *n. Bot.* A notable genus of herbs of the family *Cichoriaceæ* with milky juice, leafy stems, and flowers in heads of yellow, blue, or white flowers. Several species are weeds. *L. sativa* is the common garden-lettuce. [L.; see LETTUCE.]

— lac'tu-ca'ri-um, *n.* The dried milky juice of various species of lettuce, chiefly the *Lactuca virosa,* used in medicine as a mild anodyne and narcotic.— **lac-tu'ce-rol,** *n.* A bitter principle found in lettuce.— **lac-tu'ce-ic,** *a. Chem.* Of, pertaining to, or obtained from lactucerol.— **lac-tu'cic,** *a.* Designating a light-yellow amorphous compound ($C_6H_8O_5$) contained in lactucarium.— **lac-tu'cin,** *n.* A pearly crystalline compound ($C_{30}H_{50}O$) contained in the milky juice of lettuces. **lac-tu'cine‡.— lac'tu-col,** *n. Chem.* A colorless, crystalline, dextrorotatory compound obtained by treating lactucerin with strong alcoholic potash.— **lac-tu'co-ses,** *n.* A crystalline compound extracted from lactucarium by boiling alcohol.

lac-tu'men, 1 lak-tū'mĕn; 2 lăc-tū'mĕn, *n. Med.* The milky seal affecting nursing children; porrigo larvalis. [< L. *lac, milk.*]

lac'tu-ra'ri-a, 1 lak'tu-ra-rı'ȧ; 2 lăc'tū-rā'rĭ-ȧ, *a.* Of, pertaining to, or derived from lactic acid and urea. [< LACT- + URIC, AMIDOGEN.] **lac-tu'ric,** 1 lak-tū'rik; 2 lăc-tū'ric, *a.* **— lacturamic acid,** an amido compound ($C_4H_8N_2O_3$) derived from lactic acid and urea.

lac'tyl, 1 lak'til; 2 lăc'tyl, *n.* Anhydrous lactic acid; used chiefly as a combining form. [< LACT- + -YL.] **— lactyl phenetidin,** same as LACTOPHENIN.

La Cum'bre, 1 lȧ kŭm'brė; 2 lȧ cŭm'bre, *n.* A pass in the Andes mountains in Chile 12,500 ft. high.

la-cu'na, 1 lȧ-kū'nȧ; 2 lȧ-cū'na, *n.* [-NÆ, 1 -nē; 2 -nē, *pl.*] **1.** A space from which something is wanting or has been omitted, lost, or removed; vacancy; hiatus; gap.

The evidences of . . . hollow . . . are found in the small opening. Specif.: (1) *Bot.* An intercellular space or passage, especially such as are of about the same size as the neighboring cells. (2) *Anat.* One of the cavities in which the osseous cells of bone. See illus. under BONE. (3) *Entom.* One of the non-walled blood-cavities of the body. **3.** [L.] *Conch.* A genus typical of *Lacunidæ.* [L., < *lacus,* basin.]— **la-cu'nal,** *a.*

— la-cu'nar, *a.* **1.** Of or pertaining to a lacuna. **2.** Containing or having lacunæ. **la-cu'nal†.— la-cu'nar,** *n.* SAME AS LACUNAL. **2.** *Architecture.* A sunken panel or coffer in a ceiling or a soffit. **2.** A ceiling or a soffit having sunken panels or compartments. **laq'ue-ar‡.— lac'u-na-ry,** *a.* Lacunar; specif., (*Math.*), acting, or pertaining to, an area whose points correspond to values of the variable for which a given function is indeterminate.— **lac'u-nate',** *v. Port.* A small ditch or foss.— **La-cu'ni-dæ,** *n. pl. Conch.* A family of tenioglossate gastropods without jaws or basal denticles, and having a subglobular shell with an umbilical fissure.— **la-cu'nid,** *a.*— **la-cu'noid,** *a.*

la-cu'nose, 1 lȧ-kū'nōs *or* lak'yu-nōs; 2 lȧ-cū'nōs *or* lăc'yu-nōs, *a.* Having or abounding in lacunæ or pits; marked by shallow depressions; furrowed; as, a *lacunose* leaf or elytrum. [< L. *lacunosus,* < *lacuna;* see LACUNA.] **la-cu'nous‡.— lac'u-no's'ty,** *n.*— **lac'u-no'so-fis'tu-lose,** *a. Bot.* Marked with furrows; channeled.— **lac'u-no'so-ru'gose,** *a. Bot.* Rugose or wrinkled with irregular furrows, as a walnut-shell.

la-cu'nule, 1 lȧ-kū'nūl; 2 lȧ-cū'nul, *n.* A little lacuna.

la-cu'nu-lose, 1 lȧ-kū'nu-lōs; 2 lȧ-cū'nu-lōs, *a. Bot.* Minutely lacunose.

La-cu'nus, 1 lȧ-kū'nus; 2 lȧ-cū'nŭs, *n. Bib.* (Apocrypha). **la'cus,** 1 lē'kus; 2 lā'cŭs, *n. Anat.* A space in which fluid may collect, especially the vascular canal of Schlemm in which tears gather at the inner corner of the eye. [L., basin.]

la-cus'tri-an, 1 lȧ-kus'trı-ȧn; 2 lȧ-cŭs'trĭ-ȧn. **I.** *a.* Of or pertaining to lake-dwellers. **2.** Found in or growing in lakes or ponds, as certain minerals and plants. [< L. *lacus,* lake.] **la-cus'tral‡.— lacustrine deposits,** deposits, often stratified, of silt, peat, etc., formed on lake-bottoms. They may contain remains of indigenous plants and animals (generally fresh-water), and others washed down from the surrounding land.— **L. dwellings,** same as LAKE-DWELLINGS. **lac'y-ar'thish, lac-work.**

lac'y, 1 lās'ı; 2 lā'cy, *a.* Lace-like. **lace'y‡.**

la'dy,] lē'dı; 2 lā'dy, *n.* [LA'DIES,] -dız; 2 -dĭs, *pl.*] **1.** A refined and well-bred woman; a gentlewoman; also, a term of courteous address: often applied to any well-bred woman, also to women in general.

A real fine *lady* does not wear clothes that flare in people's eyes or use importunate manners, or make a noise as she moves: she is something refined. . . . and never obtrusive.

GEORGE ELIOT *Felix Holt* p. 84. [N.]

2. A woman of superior position in society; a woman of good family and recognized social standing: correspondending to a similar use of *gentleman*.

But if she were a real *lady* she would never be an opera-singer. DINAH M. CRAIK *King Arthur* p. 12. [n. 1886.]

3. [*L-*] In England, the title belonging to the wife of any peer below the rank of duke; also given by courtesy to the daughters of dukes, marquises, and earls, to the wives of lords by courtesy, and to the wives of baronets and knights: correlative to *Lord* or *Sir*. Compare LORD. **4.** The woman who is at the head of or has authority over a household or an estate; the mistress of a family or a manor: the feminine correlative of *lord*; as, the *lady* of the house; the *lady* of the manor. **5.** In the age of chivalry, the woman to whom a knight or squire paid homage, and in whose name he fought. **6.** A woman who is devotedly beloved: a lover's term. **7.** A wife, considered with reference to her husband: a usage now disapproved; as, my friend and his *lady*. **8.** [*L-*] In Virgil, an epithet usually coupled with *Juno*. **9.** A slate about 16 inches long and 10 broad. [C.] **10.** A calcareous apparatus in the stomach of a lobster for triturating food. **11.** *Astrol.* The planet Venus when situated in the heavens as to have controlling power or influence. **12†.** *Navy.* A gunner's mate who had charge of the gunner's small stores in war-vessels.

Lady is used (1) adjectively, as denoting female, in such phrases as *lady actor*, *lady doctor*, *lady friend*; (2) as a prefix to designations of employment to indicate that the person is or claims to be a lady; (3) in combinations, as *lady*-bower, *lady*-fingers, *lady*-looking.

Lady, as the feminine of *Lord*, according to Max Müller, "she who looks after the loaf," the mistress, has always been a title of superiority, all ladies being women, but not all women ladies. In England it is a title of rank. Its use as indicating a mere distinction of sex is a sheer vulgarism. The word *woman* best expresses the relations of the female sex to the sex, and to the world at large. The use of *lady* for *woman*, by those who wrongly suppose that the latter term is derogatory, is often ludicrous, as in such expressions as *saleslady*, a form as objectionable as *gentlemen woman* would be. In the drawing-room usage of the English aristocracy, where the word *lady*, in its use as a title, implies high rank or birth, *woman* is always preferred where distinguishing sex.

Lamiæ . . . [were] certain monsters of Africa who had the face and breast of a woman, and the rest of the body like that of a serpent. LAMPRIDIUS *Class. Dict.*

2. In Keats's poem *Lamia*, a bride of great beauty who is a lamia or serpent in human guise, and at length resumes her serpent form. **3.** The patronymic of a Roman family which claimed descent from the mythical hero Lamus. **4. Gulf of,** an inlet in the E. coast of Thessaly, Greece, S. of Mt. Othrys. **5.** An ancient town on this gulf, N. of Thermopylæ: scene of battles, 323–322 B. C. **6.** A large galeoid shark (*Carcharinus lamia*) of the Atlantic. **7.** [l-] A white shark (*Carcharodon carcharias*) of wide distribution. [L., < Gr. *lamia*, female demon.]

La-mi'i-dæ, ‡ lə-mī'ı-dē; ‡ la-mīˈı-dē, *n. pl.* A family of bees containing those included in LAMIIDÆ. [< LAMIA, 2.]

La'mi-a's, *n.* (t. g.) — **La'mi-id**, *a. & n.* — **La-mi'i-des**, *n. pl.* The *Lamiidæ*.— **La-mi'i-næ**, *n. pl.* The *Lamiidæ* regarded as a subfamily.

lam'in, ‡ lam'ın; ‡ lăm'ĭn, *n.* **1.** A lamina. **2.** A thin plate of metal used in astronomy.

lam'i-na, ‡ lam'ı-nə; ‡ lăm'ı-na, *n.* [-NÆ, ‡ -nē; ‡ -nē, *pl.*] [L.] A thin scale or sheet; a layer or coat lying over an other, as in bone, minerals, armor, etc. Specif.: (1) *Bot.* (*a*) The blade or flat expanded part of a leaf. (*b*) The blade of a petal. (*c*) The expanded part of certain fronds. (2) *Anat.* (*a*) The flattened part of the arch of a vertebra. See illus. under VERTEBRA. (*b*) One of the folds of the cortex of the cerebellum. (*c*) *pl.* The thin layers of sensitive tissue underlying and producing the hoof in perisodactyls; laminar tissue. **3.** A thin plate or layer either from their appearance or position; as, **lamina sincera, l. cribosa, l. dentata, l. spiralis,** etc. (3) *Entom.* One of two osseous plates in certain insects, probably representing the mandibles in the pupa. (4) *Ornith.* One of the processes composing the vane of a feather. (5) *pl. Geol.* The thinnest separable layers or sheets in stratified rocks, whether (*a*) original planes of deposition, or (*b*) planes of cleavage transverse to stratification. **lam'i-na-bl(e)**, ‡ lam'ı-nə-bl; ‡ lăm'ı-na-bl, *a.* Capable of being rolled or hammered into thin sheets; as, gold is the most *laminable* metal.— **lam"i-na-bil'i-ty**, *n.*

lam'i-nal, ‡ lam'ı-nal; ‡ lăm'ı-nal, *a.* **1.** Laminar. **2.** Same as POLYPROTYLOUS, 3.

lam'i-nar, ‡ lam'ı-nər; ‡ lăm'ı-nar, *a.* Of, constituting, or disposed in laminæ; lamellar; laminate. **lam'i-na-ryj**.

lam'i-na'ri-a, ‡ lam'ı-nā'rı-ə; ‡ lăm'ı-nāˈrı-a, *n.* An important genus of large brown seaweeds common in the colder coast waters of the temperate zones. The thallus forms a flat ribbon-like expansion, either simple or cleft. A few species are edible — others are used as manure and for making kelp; several, as *L. bulbosa* and *L. digitata*, attain a great length. [< L. *lamina*, thin plate.]— **lam'i-na'ri-an**, *a.* **lam'i-na'ri-e'ce-æ**, *n. pl.* = LAMINARIACEÆ. Also *Phæophyceæ* increasing by asexual spores. Several species, as *Macrocystis* and *Nereocystis*, attain immense length; *Lessonia* forms large submarine forests. **Lamina** is another well-known genus.— **lam'i-na'ri-a'ceous**, *a.*

lam'i-nar-ite, ‡ lam'ı-nar-ıt; ‡ lăm'ı-nar-ĭt, *n. Paleobot.* A fossil seaweed having broad flattened fronds, very like the fronds of the genus *Laminaria*.

lam'i-nate, ‡ lam'ı-nēt; ‡ lăm'ı-nĭt, *v.* [-NAT"ED; -NAT'ING.] **I.** *t.* **1.** To beat, roll, or press into thin sheets, as a metal. **2.** To cut or divide so as to form into thin sheets, leaves, or plates, as in working horn, celluloid, vulcanite, etc. **3.** To cover with plates.

II. *i.* To become divided into laminæ or plates. [< LL. *laminatus*, pp. of *laminare*, beating, < L. *lamina*, thin sheet.]— **lam'i-na'tor**, *n.* — **lam"ing-na-chine"**, *n.* A set of rolls or any apparatus for making thin plates of metal, as for rolling gold, preliminary to beating.— **laminating roller**, *n.* The adjustable roller in a rolling-mill whereby the thickness of metal sheets is regulated.

lam'i-nate, *a.* Being or having a lamina; arranged in laminæ.

lam'i-nat"ed, ‡ lam'ı-nē-təd; ‡ lăm'ı-nā"tĕd, *a.* **1.** Laminate or laminar. **2.** *Her.* Scaled: applied to reptiles.

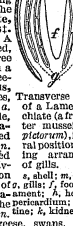
lam'i-na'tion, ‡ lam'ı-nē'shən; ‡ lăm'ı-nāˈshon, *n.* The act of laminating, or the state of being laminated; specif.: **1.** *Geol.* The division or disposition in layers of very thin sheets or plates. The term is generally limited to stratified rock or, strictly, to planes of deposition, the some apply it to tabular division of igneous crystalline rocks.

All the *lamination* of stratified rocks was undoubtedly produced originally by deposition in water.

D. HOUGHTON *Missionary Geology* p. 23. [t. & r. 1854.]

2. *Elec.* The building up of an armature, polepiece, etc., by means of thin laminæ or sheets of metal having strips of insulating-material between them in order to prevent eddy-currents, etc.— **oblique lamination**, 1. Lamination of deposition obliquely to the general plane of stratification. **2.** Same as TRANSVERSE LAMINATION.— **transverse l.**, lamination of cleavage transverse to stratification.

La-mine', ‡ la-mīn'; ‡ la-mĭnˈ, *n.* A river in Missouri; length, 130 m. to the Missouri river.



lam'ni-fer-o-my, ‡ lam'nı-fer'ə-mı; ‡ lăm'nı-fĕr'o-my, *n.* The operation of cutting through the laminæ to the spinal cord. [< LAMINA + Gr. *ektomē*, a cutting out.]

lam'ni-gon, ‡ lam'nı-gən; ‡ lăm'nı-gŏn (-gōn'), *n.* [-LIA, ‡ -lē; 2-lē, *pl.*] [< LAMINA + Gr. *gonos*, offspring.] — **lam'ni-gon'al**, *a.*

lam'ni-nif'er-ous, ‡ lam'nı-nif'ər-əs; ‡ lăm'nı-nĭf'ĕr-ŭs, *a.* Bearing or composed of laminæ.

lam'ni-nif'orm, ‡ lam'nı-nə-fôrm; ‡ lăm'nı-nı-fôrm, *a.* Having a laminar form. **lam'i-nose**‡.

lam'i-ni-pian'tar, ‡ lam'ı-nı-plān'tər; ‡ lăm'ı-nı-plănˈtar, *a. Ornith.* Having two undivided lateral laminæ or plates

Transverse Section of a Lamellibranchiate (a fresh-water mussel, *Unio pictorum*), in natural position, showing arrangement of gills.

s, shell; *m*, mantle; *k*, gill; *l*, labial palpi; *i*, inner gill; *p*, outer gill; *e*, foot; *n*, nerve-ganglion.

KEY 1: ăisle; aut = out; oil; ĭn = feud; chin; go; jet; n = sing; so; ship; thin, this; agure; F. boǹ, dûne; ʜ = loch. † obsolete; ‡ variant.
KEY 2: bo͝ok, bo͞ot; fu͝ll, rule, cūre, bût, bûrn; ȫil, bo͝y; ɛ = k; ɛ = s; go, gem; ink; ẓ = z; thin, this; F. boǹ, dûne; ʜ = loch.

which meet in a ridge on the back or planta, as the tarsi of most oscines or singing birds. [< LAMINA + L. *planta*, sole.] — **lam"i-ni-plan-ta'tion,** *n.*

Lam"i-ni-plan-ta'res, 1 lăm'i-ni-plan-tē'rēz, 2 lăm'i-ni-plan-tā'rēz, *n. pl. Ornith.* A series of oscine birds with laminiplantar tarsi. [< LAMINA + L. *planta*, sole.]

lam"i-ni'tis, 1 lăm'i-nī'tis *or* -nĭ'tis; 2 lăm'i-nī'tis *or* -nĭ'tis, *n. Vet. Surg.* Inflammation of the lamina of a horse's hoof; founder. [shaped like lamina. — **lam'i-nous,** *a.*

lam'i-nose, 1 lăm'i-nōs; 2 lăm'i-nōs, *a. Biol.* Composed of or

lam'i-sh, 1 lēm'ish; 2 lām'ish, *a.* Slightly lame.

lam'mi-ter, 1 lĕ'mi-ter, 2 lĕ'mi-ter, *n.* [Prov. Eng. & Scot.] A cripple.

La'mi-um, 1 lē'mi-um; 2 lā'mi-ŭm, *n.* A genus of Old World herbs of the mint family. Four species are naturalized in the United States. They are known as dead-nettles, and are distinguished by heart-shaped leaves and white, purple, or pink flowers. The corolla is 2-lipped, and there are 4 stamens. [< L. *lamium*, dead-nettle.]

lamm, *vt.* Same as LAM.

Lam'mas, 1 lăm'as; 2 lăm'as, *n.* 1. *R. C. Ch.* (1) A festival celebrated on August 1 in commemoration of the imprisonment of the Apostle Peter; the feast of St. Peter in chains. (2) An Anglo-Saxon loaf-mass or wheat-harvest festival held on the 1st of August, or the 12th of the modern calendar. 2. Quarter-day in Scotland and half-quarter day or cross-quarters in England, falling on Aug. 1. [< AS. *hlammæsse*, for *hlāfmæsse*, < *hlāf*, loaf, + *mæsse*, MASS, *n.*] **Lam'mas-day"s.** — **Lammas apple,** an apple ripe in August. — **L. assize** [Engl.], an assize held early in August. — **L. floods** [Gt. Brit.], a wet season supposed to recur annually about August 1. — **Lam'mas-land",** *n.* [Engl.] Land that is thrown open after the harvest to common pasturage until sowing-time. — **L.-meadow** st. — **L.-tide,** *n.* The season of Lammas.

L. wheat, winter wheat sown about Lammas-tide.

lam'mer, 1 lăm'er, 2 lăm'er, *n.* [Scot.] Amber. **lam'ert.**

lam'mer-gei"er, 1 lam'er-gī"ər; 2 lăm'er-gī"er, *n.* [G.] The great bearded vulture (*Gypaetus barbatus*) of the lofty mountains of southern Europe, Asia, and northern Africa. The lammergeier forms a connecting link between the eagles and the vultures, and measures about 10 feet in expanse of wings. It feeds on both carrion and living prey and breaks bones by dropping them from great height to obtain pieces small enough to swallow. **lae'mer-lam'mer-** or **lem'mer-ger'.**

The Lammergeier.

Lam'mer-moors, 1 lăm'er-mōrz; 2 lăm'er-mōrz, *n. pl.* Hills in Haddingtonshire and Berwickshire, Scotland; highest point, Lammer Law, 1,733 ft. high. [BERT. — **lam'mer-muir'.**

Lam'mert, *n.* [D.] Same as LAMB-**lam'mie',** *n.* [Scot.] Same as LAMBKIN. **lam'kin.**

Lam'mi-kin, 1 lam'i-kin; 2 lăm'i-kin, *n.* [Scot.] A dwarf; a child; a murderous builder who delayed his house in blood. Now the bogey-man of the nursery. **Lam'kin.**

lam'ming, 1 lam'ing, *n.* [Slang.] A whipping.

lam'my, 1 lam'i; 2 lăm'y, *n.* [-MIES, 1 -iz; 2 -is, *pl.*] 1. A

lam'mie', [thick quilted outside jumper worn in cold weather by sailors. 2. A brick misplaced out of shape in the kiln.

lam-nec'to-my, *n. Surg.* Same as LAMPECTOMY.

Lam'ni-de, 1 lam'ni-dē; 2 lăm'ni-dē, *n. pl. Ich.* The *Isuridæ*.

Lam'nus, (s. g.) [< L. *lamna*, thin plate.] — **lam'nid,** *n.* — **lam'noid,** *a. & n.*

lam-nun'gui-a, 1 lam-nŭng'gwi-ə; 2 lăm-nŭng'gwi-a, *n. pl. Mam.* The *Hyracoidea*. [< L. *lamna*, thin plate, + *unguis*, nail.]

La-moille', 1 la-moil'; 2 la-moil', *n.* A county in N. Vermont; 436 sq. m.; county-seat, Hyde Park, on Lamoille river.

La"mon-gun', 1 la"mŏn-gŭn'; 2 lă"mŏn-gŭn', *n.* A volcano, 60 m. S. E. of Sorabaya, Java; 6,561 ft. high.

La-mo'ni, 1 la-mō'ni; 2 la-mō'ni, *n.* A town in Decatur county, Iowa; seat of Graceland College (Latter Day Baptists), founded in 1895.

La"mont', 1 la"ment'; 2 lă"mŏnt', 1. **Robert Patterson** (12/1 1807–), an American manufacturer; U. S. Secretary of Commerce, 1925– . 2. **Thomas William** (9/11 1870–), an American financier and publicist; U. S. Treasury representative on American Peace Commission, Paris, 1919.

La"mo"ri'cière', 1 la"mō"ri'ĕr'; 2 lă"mō"ri'ĕr', **Christophe Léon Louis Juchault de** (3/4 1806–9/11 1865). A French general; headed papal troops against Garibaldi.

La"motte', 1 la"met'; 2 lă"mŏt', *n.* 1. **Antoine Houdart de** (1/2 1672–3/4 1731), a French poet, dramatist, and miscellaneous writer; *Inez de Castro*, etc. 2. **Jeanne de Lux de Saint-Remy de Valois, Madame de** (7/2 1756–9/2 1791), a French adventuress, wife of the Comte de Lamotte." See DIAMOND NECKLACE. **La Motte‡.**

La"motte'-Fou'qué', 1 -fu'kē'; 2 -fu'kē', **Friedrich Heinrich Karl, Baron de** (1777–1843). A German soldier, poet, and romantalist; Undine.

La-moure', 1 la-mūr'; 2 la-mur', *n.* 1. A county in S. E. North Dakota. 2. Its county-seat.

lamp, 1 lamp; 2 lămp, *n.* I. *t.* To supply light to; illuminate: light; supply with lamps. II. *i.* [Rare.] To shine.

lamp, *vt.* [Scot.] To walk rapidly with long steps; lope.

lamp', *n.* 1. Any device employing a flame, incandescent wire, or the like, for furnishing an artificial light, or a similar device for heating, as in a laboratory use; particularly, a vessel containing oil or other inflammable liquid and a wick by which the liquid ascends by capillary attraction to feed the flame at the top; as, an *oil-lamp*; an alcohol-*lamp*. See phrases and list below. 2. *Metal.* A kiln for drying molds during construction. 3. Figuratively, anything that gives out light, actually or metaphorically; as, the moon is the *lamp* of heaven.

Lamps.

1. Earliest form of oil. 2. Lamp of early Christians. 3. Electric arc. 4. Diver's electric. 5. Street oil.

4. *pl.* [Slang.] The eyes. < F. *lampe*, < L. *lampa(d-)*; see LAMPAD.] — **alembical lamp,** a lamp with a device resembling an alembic, serving to prevent the escape of smoke and vapors, and to divert them to the oil-receptacle. — **am'yl lamp,** *Chem.* A lamp used in the determination of specific experiments employing amylacetate as the standard illuminant. — **aphlogistic l.,** a lamp giving light by incandescence, without flame, as in the case of a Döbereiner's lamp. — **arc-l.,** *n. Elec.* A lamp consisting of two carbon rods, through which a current is passed, producing an arc.— **Argand l.,** a lamp having a tubular wick and admitting air both inside and outside of the flame. — **atmospheric l.,** a dentists' lamp for heating vulcanizers: automatically extinguished when the temperature reaches the desired maximum. — **Bengilis L.,** a domestic spirit-lamp having a ring-like reservoir borne by legs, and a hollow wick with a draft through the center of the reservoir. — **Bunsen's l.,** see BUNSEN-BURNER, under BURNER. — **Davy l.,** see DAVY, *n.* — **Döbereiner's l.,** a hydrogen-lamp in which spongy platinum is heated to luminosity by absorbing hydrogen directed upon it by a small jet from a self-regulating generator: aided by the oxygen of the air when the lamp-cap is removed. — **electric l.,** see ELECTRIC LIGHT, under ELECTRIC.— **flameless l.,** same as *Aphlogistic lamp.*— **Hero's l.,** a lamp devised by Hero of Alexandria about 200 B. C., in which a fountain was forced, drop by drop, by the pressure of a heavier liquid, to feed the wick.— **hydrostatic l.,** a lamp having a layer of oil floating on water or other liquid. — **lamp'-black,** *n. Elec.* A wire resistance, having a positive temperature coefficient of resistivity, used in series with an incandescent-lamp glower having a negative temperature coefficient. — **lamp'-burn'er,** *n.* A device for incandescent electric lamps arranged in rows on a frame, interconnected in multiple circuit or series. — **l.-bell,** *n.* A smoke-bell hung over a lamp. — **l.-cano-py,** — **l.-chimney,** *n.* A device for protecting the flame of a lamp from drafts.— **l.-cone,** *n.* A dome-shaped piece of metal, having a slot through which the flame issues, and through which ventilation by air passing upward through it against both sides of the flame.— **lamp'fish',** *n. Zool.* A fish of the family *Mycrophidæ* or *Scopelidæ*.— **l.-fly,** *n.* A firefly. — **l.-foot,** *n. Zool.* The peculiar modification of distributing vessels for electric lighting, equal in effect to one lamp at a distance of one foot from a given point under consideration.— **l.-glass,** *n.* A lamp-chimney. — **l.-globe,** *n.* A globe for a lamp. — **l.-guard** or **-shade** for the eyes. — **l.-head,** *n.* **1.** The electromotive force of an electric lamp: *so named from an assumed analogy to head as used in hydraulics.* **2.** The part of an incandescent lamp which lets the holder.— **l.-holder,** *n.* **1.** Any device, as a bracket, for supporting a lamp. **2.** In electric lighting, the socket in which the tubes of the electrodes of a glow-lamp are inserted and in which the glass bulb is tightly fitted.— **l.-hole,** *n.* Any hole or aperture to admit of the introduction of a lamp, as in a sewer.— **l.-hour,** *n. Elec.* The current required for a single light during one hour.— **l.-indicator,** *n. Elec.* A device for showing the failure of an incandescent lamp as an indication of potential change.— **l.-iron,** *n.* A projecting bar or bracket for suspending a lamp. — **l.-jack,** *n.* A device for lamps to prevent the flame from exclude rain or wind.— **l.-moss,** *n.* A variety of moss used in the manufacture of lamp-wicks.— **l.-nursery,** *n.* A double-walled tin trough for heating water between the two walls heated by a lamp, in which young queens are hatched out of their cells.— **l.-post,** *n.* The pillar supporting a street-lamp.— **l.-pruner,** *n.* An instrument for trimming lamp-wicks.— **l.-saver,** *n.* A device having a hook at the end to keep the fingers from the lamp-wicks which they are intended to trim, and a receptacle for the crust or pieces of wick removed; snuffers.— **l.-shade,** *n.* Any device or material designed to reflect, moderate, or impart color to the light of a lamp.— **l.-shell,** *n.* A terebratuloid or related brachiopod having a shell resembling an antique lamp.— **l.-stand,** *n.* A standard or support for a lamp.— **l.-station,** *n.* A room in a coal-mine for the care and storage of safety-lamps.— **l.-stove,** *n.* An oil-stove.— **Nernst l.,** an incandescent electric lamp, invented by Prof. Nernst of Göttingen, in which the light-giving element consists of one or more rods or filaments composed of a mixture of metallic oxids.— **N. Garland l.,** a student-lamp.— **nitrogen l.,** same as *Gas-filled lamp.*— **oil-l.,** *n.* A lamp for smoking the glazed paper on the drum of a kymograph.— **tungsten-l.,** *n. Elec.* An incandescent electric lamp having a filament of tungsten, which gives a more brilliant white light at a relatively low current-consumption, requiring an expenditure of only 1.25 watts per candle-power as against 3.5 watts per candle-power which the carbon-filament lamp consumes.

Lamps are named (1) from their use, purpose, or place of use; as, **annealing-lamp** (a dentists' lamp for heating foil), **blanched-l., blowpipe-l.** (for blowing or fusing glass), **frost-l.** (a lighthouse lamp for heating the oil of the lantern in cold weather), **miners' l.** (a safety-lamp), **print-lamp-l.** (a yellow lamp used in printing-rooms), **reading-l.** (for concentrating upon metal), **reading-l.** (screened), **roof-l., signal-l., singeing-l.** (for singeing horses' hair), **smoking-l.** (for lighting pipes on a journey or during the intervals when smoking is allowed), **student-l.** (see STUDENT), **street-l., submarine l., tail-l.** (a signal-lamp at the tail of a railway-train), etc.; (2) from the lighting-fluid employed or its character; as, **alcohol-l., camphene-l.** (for burning camphene), **carbonated-hydrogen-l.** (in which wood-alcohol is burned in contact with platinum, asbestos, or other non-combustible substance so as to evolve formaldehyde, as a disinfectant), **gas-l.** (for burning illuminant-gas), **helion-l.** (an incandescent electric lamp producing a brilliant white light, by means of a carbon filament coated with helion), **kerosene-l., kerosene-mantle-l., kerosene-l., luminiscence-l.** (in which the light is produced by an electric discharge in a highly rarefied space), **mercury-l.** (one deriving light from the passage of an electric current through mercury-vapor), **naphtha-l., nitro-filled l., pentane-l.** (burning pentane-vapor and air), **petroleum-l., safety-l.** (see MINER-LAMP, DAVY, and MESSENGER), **spirit-l.** (an alcohol-lamp), **tantalum-l.** (an incandescent lamp with a filament of tantalum), **tar-l., uviol-l.** (an adaptation of the mercury-lamp for medical apparatus, by employing uviol glass), etc.; (3) from some feature of mechanism or arrangement; as, **blast-l.** (for heating, having a flame directed by an air-blast), **blow-through l.** (in which powder is blown through a flame in pulverulent form for photographs), **carbon-l.** (an arc-lamp), **clutch-l.** (an arc-lamp in which the upper carbon is adjusted automatically by a clutch), **focus l.** (an incandescent-lamp with an adjustment or the carbons so adjusted that the light is steadily held in the focus of lens or mirror), **fountain l., glow or incandescent l.** (q.v., electric lamp with incandescent filament), **hanging l., mechanical l.,** or **pump-l.** (in which the fluid is supplied to the wick by pumping), etc.; (4) after the inventor; as, **Argand l., Berzelius l.** (see above), **Brehmer l.** (an arc-lamp using carbons containing a percentage of calcium fluorid), **Bunsen l.** (see BUNSEN), **Cooper-Hewitt l.** (mercury-lamp), **Dibdin's l.** (one burning a mixture of air and pentane), **Döbereiner's l.** (see above), **Duboscq l.** (an arc-lamp provided with automatic regulating devices), **Finsen l.** (see FINSEN), **Girard l.** (an oil-burning lamp provided with a device for maintaining the fuel at a constant level), **Harcourt l.** (a pentane-lamp, used as a standard of illuminating-gas photometry), **Hefner l.** (a photometric lamp burning amylacetate), **Keats l.** (burning sperm oil), **Kitson l.** (one burning a mixture of air and gasoline vapor under a pressure), **Kelchsanstall's l.** (a modified form of Hefner's lamp), **Rose l.** (a Berzelius lamp, capable of being secured to a vertical supporting rod at any desired height), etc.

lamp', *n.* A thin plate; lamina.

lam'pad, 1 lam'pad; 2 lăm'pad, *n.* [Rare.] A lamp or luminary; torch; candlestick. [< L. *lampad(d-)s*, < Gr. *lampad(d-)s*, < *lampō*, shine.]

— **lam'pa-da-ry,** *n.* [-RIES, *pl.*] *Gr. Ch.* One who looks after the lamps and carries a lighted taper before the patriarch.— **lam'pa-ded'ro-my,** *n.* An ancient Greek torch-race in honor of Prometheus, Athena, or Hephæstus, Demeter, Pan, or Artemis, in which the contestant who arrived first at the goal with his torch still burning won the prize. **lam'pa-de-pho'ri-a‡; lam'pa-drome‡.** — **lam-pad'ephore,** *n.* A runner in the Greek torch-race. **lam"pa-deph'o-rost‡; lam'pa-dist‡.** — **Lam-pa-di'as,** *n.* **1.** The star Aldebaran: Ptolemy's name. **2.** [l-] A bearded comet.

lam'pa-dite, 1 lam'pa-dīt; 2 lăm'pa-dīt, *n. Mineral.* A variety of psilomelane containing copper oxid, and sometimes cobalt oxid. [< Gr. *lampas*, torch.]

Lam-pa'di-us, 1 lam-pā'di-us; 2 lăm-pā'di-us, **Wilhelm August** (1772–1842). A German chemist; founder of metallurgy.

lam-pad'o-man"cy, 1 lam-pad'o-man"si; 2 lăm-pād'o-măn"cy, *n.* The art of divining by the flame of a lamp or torch.

lam'pa-ra, 1 lam'pa-ra; 2 lăm'pā-ra, *n.* [Sp.] A lamp.— **l.-net,** a net used with a lamp for night-fishing for sardines, horse-mackerel, etc. Used in California, on the African coast, and in the Mediterranean.

lam'pas', 1 lam'pas; 2 lăm'pas, *n.* [Fr.] A flowered stuff of silk and wool used in upholstery. **lam'pass‡.**

lam'pas', *n.* Same as LAMPERS. **lam'pass‡.**

lam-pas'as, 1 lam-pas'as; 2 lăm-pās'as, *n.* **1.** A county in central Texas; 755 sq. m. 2. Its capital.

lamp'ate, 1 lamp'ēt; 2 lămp'āt, *n. Chem.* A salt of lampic

lamp'black', 1 lamp'blak'; 2 lămp'blăk', *n.* To apply lampblack to.

lamp'black", *n.* Finely divided carbon deposited from smoke or smoky flame: used as a pigment, in printers' ink, etc. Compare GAS-BLACK, under BLACK.

lam'pe-du'sa, 1 lăm'pe-dū'sa; 2 lăm'pe-dū'sa, *n.* An island 150 m. S. of Sicily; belongs to Italy.

lamp'er, 1 lamp'er; 2 lămp'er, *n.* One who makes a business of cleaning lamps.

lam'per-eel', 1 lam'per-ēl'; 2 lăm'per-ēl', *n.* 1. A lamprey.

lam'preel‡. 2. An eel-pout or mutton-fish (*Zoarces*).

lam'per-i'na, 1 lam'per-ī'na; 2 lăm'per-ī'na, *n. Ich.* A fish (*Coliauerina steuti*) of the family *Heptercamidæ*; the California hagfish.

lam'pers, 1 lam'perz; 2 lăm'perz, *n.* A river-lamprey, as *Ammocœtes fluviatilis*.

lam'pers, 1 lam'perz; 2 lăm'perz, *n. Vet. Surg.* Inflammation and swelling of the fleshy bare in the roof of the mouth of a horse. [< F. *lampas*, throat.] **lam'pas‡; lam'prest.**

lam'pet, *n.* [Scot.] A limpet. **lam'pit‡.**

lam'pe-ter, 1 lam'pe-ter; 2 lăm'pe-ter, *n.* A market-town in Cardiganshire, Wales. [LLAN.

lan'guage†, *n.* **1.** All the articulate sounds, considered as forming the aggregate of words and sentences which human beings employ for the communication of ideas, together with the written or printed representations of such sounds; the expression and record of human ideas and thoughts by spoken or written signs; speech; as, *language* makes past knowledge present treasure.

The elements of language are (1) *nouns* or merely naming words, also called *substantives*; (2) *adjectives* (words attributing or predicating), sometimes called *nouns adjective;* (3) *verbs* (words asserting action or being); (4) *participles* (words more closely defining and giving the references of general relation: called *adverbs* when more nearly defining and making particular a quality or relation; *prepositions* when showing the relations of objects; *conjunctions* when connecting words or statements). These are combined into (1) *phrases*, (2) *clauses*, and (3) *sentences*, simple, compound, and complex. See these words.

2. The words and combinations of words forming the means of communication among the members of a single community, nation, or people.

Philologists recognize groups of related languages or language-stocks, the most important of which (genetically classified) are the *Aryan* or *Indo-European*, the *Semitic*, the *Ural-Altaic, Scythian,* or *Turanian*, the *monosyllabic* or *isolating*, or southeastern Asian, and the *Hamitic* (see these words). These groups of languages may be roughly classified, according to their morphological characters, as *agglutinative, incorporating, inflectional,* or *isolating.* In **agglutinative languages,** grammatical relations are shown by infixes, prefixes, and suffixes, which, while not in themselves independent words, are clearly distinguishable from those they modify. The agglutination varies from such simple forms as the English *teach-er, teach-ing, teach-ful-ly,* to the complexities of such expressions as the Turkish *sev-in-dir-il-me-mek* (not to be made to love oneself), composed of the root *sev* (to love), in combination with reflexive causative, passive, negative, and infinitive particles. The chief families of agglutinative languages are the Bantu, Dravido-Munda, Hamito, Malayan, Polynesian, and Ural-Altaic, and they also include Ainu, Japanese, Korean, Liukiu, Caucasian, Georgian, Basque, Hottentot, Negrito, native Australian, and Tasmanian. In **inflectional languages,** the agglutination has become so advanced that it is difficult to distinguish the original root word from its inseparable modifiers, the former frequently having no existence as a separate word, and the latter sinking to mere inflectional or declensional forms. The form of the root itself may also be modified to express varying relations. The most abstract type of inflection is evidenced in such forms as the English *ring, rang, rung, mouse, mice,* and the Arabic *saltm* (be safe), which forms a causative, *sallam* (deliver up), and a verb-noun *t-saltm* (surrender). The Semitic family of languages is most clearly distinguished by this structural character, which is shown in its triliteral roots, its internal vowel-change, and which is present to some small extent in most agglutinative tongues. In **incorporating languages,** the development of the inflectional forms is carried to an extreme, the verb becoming practically a complete sentence in itself. The beginning of incorporation is seen in such languages as Latin, in which the verb endings are distinct enough in themselves to permit of the omission of an independent pronoun, as *amat* (he loves), *scripsimus* (we have written), and its logical conclusion is seen in such languages as Mexican, in which object-pronouns are incorporated bodily into the verb, as *ni-naka-ka* (I-meat-eat), *ni-itaweiki* (I-something-strike). In certain North-American languages this principle is carried to the point of conjugating long sentences as verbs in a very complex manner. Basque, which provides inflections to express all possible combinations of nouns with verbs, such as *let-dum-shaqu-ta-tsa*, is the sole European example of this type of language. In **isolating languages,** grammatical relations are indicated by the relative position of words, or word-order, and partly by the use of particles. They consist essentially of sequences of formally independent words, each of which is an integral sign, not divisible into parts having separate meanings. The many dialects of Chinese are typically isolating, as Malay, their tendency is to become monosyllable, as Chinese, Burmese, etc. Most of these monosyllable types are also **tone-languages;** that is, they depend upon variations of tone for the distinction between otherwise identical words. All agglutinative and inflectional languages are further distinguished as **polysynthetic** or **analytic,** according, as permitting an almost indefinite number of inflectional and derivative elements to be attached to one word, as in Turkish, and being characterized by syncopation or elision of syllables, phrases, or words, as in **synthetic** or **allgosyn-thetic,** as allowing the addition of no more than one derivative element to a stem. When a language loses its inflectional character and uses its inflectional elements to express indicate grammatical relations, as does English, it is termed **analytical,** from its analysis of former inflected words into new and separate words. In the process of change uniform and many inflections are lost, without being replaced by analytical combinations, while many again subsist side by side with the newer analytical forms of expression. This may be clearly seen in both English and French, typical analytical languages, in which, for example, the accusative relation of nouns is no longer expressed by inflection analyzed into a preposition. In the Romance languages the new analytical forms often tend to become modified into secondary inflections, as in verbal tense terminations. Broadly speaking, it seems probable that the inflectional languages were at one time isolating and have passed through the agglutinative stage. It would also appear that certain languages, once agglutinative and analytical, have reverted to the isolating type through a process of phonetic decay, as in modern Chinese. See chart on next page.

3. *Psychol.* The inner cognitions and powers which induce and make possible the creation and use of all forms of human communication by speech; as, man alone *among the animals has language.* 4. Any method of expressing ideas, sentiments, or feelings, whether by uttered or written words; especially, the inarticulate utterances of the lower animals; as, the *language* of birds; the *language* of the eyes or of flowers.

In the sculptures of the Egyptian Gallery of the Romans, . . . the highest charm is the universal *language* they speak.

EMERSON *Essays, Art* in first series, p. 283. [n. m. & co. 1890.]

5. The vocabulary or technical expression used in a specific business, science, etc.; as, the *language* of law, of any; thieves' *language.* 6. Characteristic phrases or words used by a person; one's manner of expression or use of speech; as, Shakespeare's *language* is universally admired; profane *language.*

Not only the thoughts of a great poet but the *language* in which his thoughts are clothed displays his genius.

H. R. RAMSBOTTOM *Literary Masterpieces* p. 149. [n. 1891.]

7. *Phren.* The faculty that gives facility of expression; the ability to select appropriate words or forms of speech. **8.** A division or branch of an international religious and military order; as, the *English language* of the Knights Templars. **9.** [Archaic.] A nation or race, as distinguished by its speech. [< F. *langage*, < L. *lingua*, tongue.]

Syn.: tongue, dialect, diction, idiom, mother tongue, patois, speech, tongue, vernacular. *Language* signified originally *expression* of thought by spoken words; now in its widest sense it signifies *expression of thought by any means,* and does not necessarily confine itself to words; as, the *language* of the eyes, the *language* of flowers. *Speech* denotes the power of articulate utterance; we can speak of the *language* of animals, but not of their *speech.* We speak of the *speech* or *language* of some one people, country, or race. A *dialect* is a special mode of speaking a *language* peculiar to some locality or class; the *dialects* of the English people, as the *language* of the eyes, the *language* of flowers. *Speech* denotes the power of articulate utterance; we can speak of the *language* of animals, but not of their *speech.* We speak of the *speech* or *language* of some one people, country, or race. A *dialect* is a special mode of speaking a *language* peculiar to some locality or class; the *dialects* of the English people, as distinguished from the standard usage; a *barbarism* is a perversion of a *language* by ignorant foreigners, or some usage akin to that. *Idiom* refers to the construction of phrases and sentences, and the way of forming or using words; it is the peculiar mold in which each *language* casts its thought. The great difficulty of translation is to give the thought expressed in the *language* in the *idiom* of another. A *dialect* may be used by the highest as well as the lowest within its range; a *patois* is distinctly illiterate, belonging to the lower classes; those who speak a *patois* understand different forms of the same *language*, but speak only the degraded form, as in the case of the Italian lazzaroni or the former negro slaves in the United States. *Vernacular*, from the Latin, has the same general sense as the Saxon *mother tongue*, of one's native *language*, or that of a people; as, the Scriptures were translated into the *vernacular.* See SPEECH.

—lan'guage-mas"ter, *n.* A teacher of languages.—**l. of stamps,** a method of conveying a meaning to the recipient of an envelop by placing the stamp on it in certain positions.—**lin'guarly†,** *a.* Of a language in which the words are chosen for their fitness and purity, and with regard to a finished style; distinguished from the vernacular by a superior and fuller vocabulary. **2.** A language which possesses a literature.—**logistic l.,** any one of the systems for expressing quantitative values by signs such as musical notes, chemical symbols, mathematical characters, and the like. Scientific terminologies and tables of measures are examples.

lan'guaged, *a.* **1.** In comb-making, a metal distance-piece used between the blades of a comb-cutter's saw.

2. See LANGUETTE, 2. **3.** See LANGUET (2). [Cor. of LANGUEZ.]

lan'guaged, 1 lan'gwijd; 2 lăn'gwăjd, *a.* **1.** Having a language; speaking a language: chiefly used in composition; as, a soft-*languaged* people. **2.** Learned in languages, or gifted in the use of language; as, a highly *languaged* man.

lan'guage-less, 1 lan'gwij-les; 2 lăn'gwăj-lĕs, *a.* Incapable of speech; lacking in language; dumb.

langue, 1 lăng; 2 lăng, *n.* [F.] **1.** A body of men speaking the same tongue or language; as, in the Order of the national divisions of the Knights Hospitalers of St. John of Jerusalem. **2.** *Her.* The tongue, as of a lion.

—langue de bœuf. 1. A pike, used in the 15th and following century, with blade very wide at its head, tapered rapidly toward the point. **2.** A short Italian sword or dagger used particularly by the Venetians.—**l. d'oc,** Provençal: so called from the use of the word *oc*, instead of *oui*, yes.—**l. d'oui or l. d'oïl,** that dialect of French that was spoken and written north of the Loire during the middle ages; the predecessor of modern French: so called from the use of the word *oïl* or *oui* for yes.

langued, 1 lăngd; 2 lăngd, *n. Her.* Having a tongue different in tincture from the rest of the animal.

Lan'gue-doc', 1 lan'gə-dŏk'; 2 lăn'gĕ-dŏk', *n.* A former province in southern France; now forming the departments of Aude, Tarn, Hérault, Lozère, Ardèche, and Gard, and parts of Haute-Garonne and Haute-Loire.

Lan"gue-do'cian, 1 lag'gwi-dō'shən; 2 lăn"gwĕ-dō'shăn. I. *a.* Of or pertaining to Languedoc, a former province of France. II. *n.* I. A native or inhabitant of Languedoc. 2. Provençal, the language of Oc. See LANGUE.

lan-guen'te, 1 lan-gwen'tē; 2 lăn-gwĕn'tē, *adv.* [It.] *Mus.* Languishingly.

lan'guent, 1 lan-gwen'ənt; 2 lăn-gwĕn'ĕnt, *a.* [Rare or Humorous.] Becoming languid or tired. [< L. *languescen(t-)s*, ppr. of *languesco*, freq. of *langueo*, be languid.]

The foles *languescent*, send from arid zones.

RICHARD ASHLEIGH, *Reply to Lady Lucia Tutor* st. 1.

lan'guet', 1 lag'get; 2 lăg'gĕt, *n.* A little tongue, or something resembling a tongue. Specif.: (1) Same as LANGUAGE, (2). A TABLE OF THE PRINCIPAL LANGUAGES OF THE WORLD.[1]

Based on T. G. Tucker's *Introduction to the Natural History of Language.*

Division.	Subfamily.	Branch and Languages. Black face type indicates the branch, and asterisk that the language is no longer spoken.	Characteristics and Incunabula.
INDO-EUROPEAN.[3]	ARYAN.	**1. Iranian.** Afghan; Baetrian*; Baghili; Galcha; Huzvarish*; Kurdish; Modern Persian; Old Persian*; Ossetih; Pahlavi*; Parsee; Pazend*; Pukhtu; Pushtur Tocharish. **2. Indian.** Ardhamagadhi*; Assami; Avanti*; Awadhi; Bengali; Bhili; Bhojpuri; Bihari; Braj Bhasha; Bundeli; Dakhini; Desi; Eastern Hindi; Gipsy (or Romany); Gujurati; Hindi; Hindustani; Jaipuri; Jatki; Kabul; Kanauji; Kandahar; Kashmiri; Kohistani; Konkani; Lahnda; Lari; Magadhi*; Magahi; Maharashtri*; Maithili; Marathi; Marwarri; Multani; Nepali; Pahari; Pali*; Pracya*; Prakritic*; Punjabi; Rajasthani; Raverty; Sanskrit*; Saurasent*; Sindhi; Urdu; Uriya.	Sanskrit represents the oldest form of Aryan, and as preserved in the Vedas dates back to 1500 B. C.; the Prakritic developed about 300 B. C., and from it nearly all modern Indian speeches have ramified. The language of the Avestas, loosely styled Zend or Old Bactrian or Zend-Avesta, is the oldest of the Iranian tongues. Gipsy came into Europe in the 12th century having borrowed from Persian and Armenian on the way. Various dialects of northwestern India, including Kafiristan, Chitral, Gilghit, and Dardistan, have recently been regarded as descended from Aryan but independent of either Indian or Iranian.
	ARMENIAN.	Old or Classical Armenian*; Modern Armenian.	A half-way speech between Aryan and Slavo-Celtic, showing Semitic influence. Armenian literature begins in 400.
	HELLENIC.	**1. Æolic.*** Arcadian*; Bœotian*; Cyprian*; Gleau; Lesbian*; Thessalian.* **2. Doric.*** Corinthian*; Cretan*; Laconian*; Megaric*; Peloponnesian*; Sicilian.* **3. Ionic*** or **Epic.*** **4. Iono-Attic.** Alexandrian*; Byzantine*; Hellenistic*; Modern or Neo-Greek; Romaic; The Koine.* **5. Northwestern Greek.** Ætolian*; Epirote*; Locrian*; Phocian.*	Epic poetry, represented by the Iliad and Odyssey, dates from the 10th century B. C.; Attic literature predominated in 400 B. C. and subsequently gave way to the Koine which became corrupted during Byzantine times into Romaic, whence modern Greek. During the 19th century a Neo-Greek revival began in favor of reinstating the Classicism of the Koine.
	ILLYRIAN.	**1. Northern Illyrian.** **2. Southern Illyrian.** Albanian (Gueg and Tosk); Phrygian*; Scythian*; Thracian.*	Vocabulary is largely mixed with Latin and Greek words, Albanian is sole survivor of a group of dialects formerly spoken by the Messapians, Iapygians, and Dunians.
	CELTIC.	**1. Brythonic.*** Armorican*; Breton; Brezoneth*; Cornish*; Cymrece or Cymric*; Welsh. **2. Gaulish.*** **3. Goidelic (Gaelic).** Irish; Manx; Erse or Scottish Gaelic.	Gaulish lingered in France until the 6th century. Irish is the classical speech of Celtic philology; Ogham inscriptions in Irish date earlier than the 5th century; St. Patrick's *Hymn*, 5th century. The language of the Picts is generally held to be related to Brythonic.
	ITALIC.	**1. Umbro-Samnitic.*** Falernian*; Iguvine*; Lanuvian*; Ligurian; Marrucian*; Marsian*; Messapian*; Oscan*; Praenestinian*; Sabellic*; Sabine*; Sicel*; Umbrian*; Venetic*; Vestinian*; Volscian.* **2. Classical Latin.*** **3. Popular Latin.*** Italian (including Sicilian and Tuscan); Langue d'oc (including Catalan and Provençal); Langue d'oil* (including French and dialects); Portuguese and Galician; Rhæto-Romanic* (including Ladin and Romansch); Spanish (including Andalusian, Aragonese, Asturian, Castilian).	Etruscan is of unknown origin. Italian is a development of the Latin *Sermo rusticus*, and Spanish of the popular Latin carried into Spain. In France a *lingua romana* or Romance tongue existed in the 7th century, the *Franc of St. Eulalie* (9th century) is its earliest literary document. The Langue d'oc or language of the troubadours, became known as Provencal, and sank into a patois after the 13th century. After undergoing Teutonic influence the Langue d'oil found itself predominant in the 13th century and thenceforth gained a sort of international currency.
	TEUTONIC.	**1. East Teutonic.** Gothic* or Mœsogothic*; Old Norse*, or Scandinavian* (including Danish, Icelandic, Norwegian and Swedish). **2. West Teutonic.** Old Frankish*, whence Netherlandish (including Dutch and Flemish); Old Frisian*; Old Saxon*, whence Anglo-Saxon* and English, Continental Saxon* and Platt-Deutsch or Low German; South German* (including Alamannic*, Bavarian*, Swabian*, etc.) whence High German* and German.	Gothic is extant in portions of the Bible of Ulfilas (4th century) in the *Codex Argenteus*. The Norse tongues have been preserved in the 9th century Eddas and Skalds of Iceland. Old Saxon is represented by a Christian poem *Heliand* (830) composed in Westphalin; Old High German, by the Strasburg Oaths (842). Middle High German by the epic of the *Nibelungen*, and Modern German owes its sway to the influence of Luther's translation of the Bible. English written literature begins with *Beowulf* and the poems of Cædmon (670–680). Modern English dates from about 1485.[2]
	SLAVO-LITHUANIAN (BALTO-SLAVIC).	**1. Baltic.** Kurland; Lettic, Lithuanian, Old Prussian. **2. Slavonic, Southern** and **Eastern.** Bulgarian; Great Russian; Little Russian; Old Church Slavonic*; Old Slovene; Russian; Ruthenian or Russniak; Serbo-Croatian or Horvatian; Slovenian; White Russian. **3. Slavonic, Western.** Czech; Kasubian; Lusatian; Moravian; Polabian*; Polish; Slovakian; Sorbian; Wendish.	In the 8th century Slavonic was spoken throughout western Europe; the oldest literary record is the *Ostromir Gospels* which shows the language as it was in the 9th century. The earliest document in Polish is the 14th century *Psalter of Queen Margaret.* Russian has records since the 11th century, but no genuine literature till the 18th century.
SEMITIC.	NORTH SEMITIC.	**1. Aramæo-Assyrian.** Edessan Aramaic, or Syriac; Jewish Aramaic, or Biblical Chaldee*; Palesthian Aramaic*; Assyrian with Babylonian*, and Mandean.* **2. Canaanitic.** Hebrew*; Moabite*; Nabatæan*; Palmyrene*; Phenician with Iberian*; Punic*, and possibly Basque, or Escuara, or Euskarian.	Assyrian is the most archaic form of Semitic speech; from it came Aramaic, the Semitic language of commerce, about 1000 B. C., which gave way to Syriac at the beginning of the Christian era, and was in turn supplanted by Arabic about A. D. 1000. The languages of the Canaanitic group are mainly dialects of the same speech, the golden age of the language being represented by the older portions of the Old Testament. Arabic reached its golden period about the beginning of Islam. Geez was the court language of Abyssinia until the 14th century, when it gave way to Amharic. It possesses a translation of the Bible dating from about A. D. 400.
	SOUTH SEMITIC	**1. Arabic.** Bedouin; Classical Arabic*; Hadramautian; Maltese; Mograbin; Mozarabic; Neo-Arabic; Thamudic or Libyan*. **2. Himyaritic.** Ehkile or Hakili*; Himyaritic*; Katabanian*; Mahri-Sokotri*; Minæan*; Sabean.* **3. Abyssinian.** Amharic; Axumite*; Geez*; Guragne; Harari; Tigrai; Tigré; Tigrine.	
URAL-ALTAIC (FINNO-TATARIC, SCYTHIAN, SIBERIC, TUNGUSIAN).	FINNO-UGRIC, FINNIC, UGRIAN, UGRO-FINNIC.	**1. Finnic.** Chudic; Crevinian; Esthonian; Finnish (Suomi); Karelian; Lapponic; Livonian; Vepsic; Votic. **2. Permian.** Permian; Siryanian; Votiak. **3. Ugric.** Magyar (Hungarian); Ostiak; Vogul. **4. Volga-Finnic (Bulgaric).** Cheremisian; Mordvinian.	An agglutinating speech spread over a vast region from Turkey to the Sea of Okhotsk and from the Mediterranean to the Arctic ocean. Finnish has a literature including the modernized *Kalevala*, an epic poem, of which *Hiawatha* is an imitation. Linguistic data in Magyar go as far back as the end of the 12th century. Osmanli, the official cultivated Turkish, is rich in poetry modeled on the Persian style and dating back to the 15th century.
	MONGOLIAN.	Buriat; Kalmuck; Sharra (Mongolian proper); Teleutic.	
	SAMOYEDIC.	Beltir; Kaibal; Kamasin; Karagass; Motors; Targhi; Yuraks.	Philologists detect a relationship between the Accadian or Sumerian and Etruscan languages and one or other of the subfamilies of the Ural-Altaic division. The Sumerian problem presents the anomaly of an idiom on Babylonian inscriptions clearly non-Semitic in character, and remarkable for vocalic dissimilation similar to that found in modern Finnish.
	TUNGUS.	Gold; Lamut; Manchu; Tungus.	
	TURKO-TATARIC.	Kara-Kalpak; Kipchak; Kirghis; Nogair; Turkish (Osmanli); Uiguric (including Jagataic, Turkoman, Nigier); Tatar; Uzbek; Yakuk.	
	JAPANESE.	Japanese.	Japanese is apparently distinct from the Ural-Altaic family, and possesses a literature dating from A. D. 712 in the Kosiki, or sacred book of Shintoism.
KOLA-RIAN OR MUNDA.		Asur; Gadaba; Juang; Kharia; Kol; Korku; Korwa; Santali; Savara.	Agglutinative speeches spoken by tribes in the mountains west from Calcutta. The census of India, 1901, prefers the form Munda.
DRAVIDI-AN OR TAMIL.		Brahui; Gond; Kanarese; Khond; Kotah; Kudagu; Kurgi; Malayalam; Maito; Oraon; Telugu or Telinga; Toda; Tulu.	Spoken from Madras to Cape Comorin and from the Ghats to the bay of Bengal. The oldest poem is the *Ramacharitain*, written during the 13th century in Malayalam. The *Tolkappiyam*, the oldest extant Tamil grammar, dates from about this time.
		Singhalese.	A mixed tongue, dominated by Sanskritic influences.
HAMITIC.	EGYPTIAN.	**1. Ancient Egyptian.** Demotic*; Hieratic*; Hieroglyphic.* **2. Coptic** or **Modern Egyptian.** Akhmymi; Bashmuric or Fagumic; Memphitic or Bohairic; Sahidic; Theban.	Ancient Egyptian, of which Demotic was the vulgar speech of the Saite period, can be traced back in hieroglyphics for over 6,000 years; Coptic, its lineal descendant, has a Christian literature in Greek characters, and existed as a spoken tongue until 3 centuries ago when it was supplanted by Arabic. The Berbers have a peculiar alphabet of 32 letters, and antique Berber inscriptions have been found all over North Africa; Berber is the most common speech of Morocco and western Sahara.
	CUSHITIC.	Agaw; Beja; Denkali; Galla; Somali.	
	BERBER or LIBYAN.	**1. Ancient.** Avrigha*; Gatulian*; Guanche*; Kahaka*; Lebu*; Mauritian*; Nashuasha*; Numidian*; Tamkut*; Teheurin.* **2. Modern.** Amasigh; Amoshagh; Aulmanglan; Benghazi; Beni-Mzab; Berber; Jebalia; Kabyle; Rif; Shilka; Sorgu; Sus; Tamasheck; Tibbu; Tuareg; Zenagalia; Zouaoua.	
BANTU.[4]		**1. Eastern.** Kafr; Kikamba; Kikuyu; Kipokomo; Nyanja; Swahili; Zulu. **2. North** and **Central.** Balolo; Bechuana or Sechuana; Kavirondo; Ocl-Herero; Serolong; Sesuto; Tekeza; Uganda; Yao. **3. Western.** Bangala-Bobangi; Benga; Dikele; Duala; Fan; Isubu; Congo; Nipongwe.	The purest Bantu is spoken on the Congo, and by the Zulus and Ocl-Hereros. The most corrupt is the Fan. The family includes about 150 dialects. Swahili is the commercial language of eastern and central Africa. Bangala-Bobangi is the commercial language of Upper Congo.
NEGRO.		Ashanti; Bari; Bornu; Denka; Eve or Ife; Fellup; Haukoin; Hausa; Ibo; Kroo; Mandingo; Mende; Shelluh; Songhrai; Wolof; Yaruba.	Hausa is a *lingua Franca* or commercial language of Middle Africa. Wolof is spoken in Senegal.
NU-BIAN-FULAH.		**1.** Fulah or Ful. **2.** Dongolawi; Nubian; Tumali.	Suffix-agglutinating speeches of uncertain genealogical relationship, spoken westward of Lake Chad.

[1] For the **Indo-Chinese, Malayan,** and **Polynesian** groups of languages, see tables in vocabulary place.
The native American tongues are polysynthetic or holophrastic; the names of these languages follow the names of the tribes using them (see AMERICAN). To these must be added Eskimo (including the Innuit of America and the Yuit of Asia) and Aleutian.

[2] The main branches of the Indo-European family are also classified according to certain phonetic differences (the hard consonants in one group being converted into sibilants in the other group), which philologists exemplify in the word for "hundred," in Latin *centum* (pron. *kentum*), in Zend *satem*, by which words the groups are usually known. Aryan, Illyrian, Armenian, and Balto-Lettic are *satem* speeches; Hellenic, Italic, Celtic and Teutonic are *centum* speeches.

[3] The periods of transition of the English language may be roughly divided as follows: (1) Old English, comprising Early Old English (500–800), represented by the writings of Cædmon, Bede, Cynewulf; Anglo-Saxon (900–1000), represented by the *Lindisfarne Gospels* and the works of Alfred; Late Old English (1100–1150), represented by the *Peterboro' Chronicle.* (2) Middle English, comprising Early Middle English (1150–1250), represented by the *Ormulum* and the writings of Layamon; Middle English (1250–1400), in which the names of Robert of Brunne, Wycliff, Chaucer, and Gower are prominent; Late Middle English (1400–1485). (3) Modern English, including Tudor English (1485–1611); current English.

In strict sense, *last* is not properly used of more than three; since it is a superlative; *latter* of two or more than two, since it is a comparative. But while the use of *last* for *latter* and of *latter* for *last* has had wide sanction in books, the present tendency, under the impulse of grammatical criticism, is toward strict consistency. **2.** Next before the present; as, *last* evening. **3.** Least likely (to be or do anything); most remote from (a given course or condition); as, he is the *last* man to permit it. **4.** Beyond or above all others; utmost; as, matters of the *last* importance.

Latin is a member of the Aryan (Indo-European) family of languages and stands at the head of the Italic group, occupying a position midway between the Celtic and Hellenic groups. Originally only one of the dialects spoken in the towns and villages of the plain of Latium in Italy, with the growth of Rome's dominion over her neighbors Latin rose to supremacy and became the *lingua Latina*; Latin: carried afterward by Roman conquests into almost every part of the known ancient world, it became, in its popular form, the *lingua Romana*, which was extensively corrupted with foreign forms and idioms, the parent of the Romance languages of southern Europe, as the Italian, French, Spanish, etc. The earlier form of Latin, generally known as the archaic stage, which preceded the beginnings of literary culture, survives in a number of inscriptions dating from before the 3d century B. C., which indicate that it was as crude and undeveloped as the Oscan and Umbrian. Three periods in the development of literary Latin are usually recognized: (1) **The Ante-Classical** (240–84 B. C.), including the writings of Ennius, Plautus, and Terence. (2) **The Classical**, divided into (*a*) the *Golden Age* (84 B. C.–A. D. 14), in which the influence of Greek is prevalent, including the works of Cicero, Cæsar, and the Augustan poets, and (*b*) the *Silver Age* (A. D. 14–180) of later Latinity, including such writers as Seneca, Pliny, Tacitus, and others. (3) The **Post-Classical** (A. D. 180 to about the end of the 17th century), including the writings of the early Christian fathers, the schoolmen, and all ecclesiastical and medieval writers. The Latin of this period, tho the recognized medium of communication among scholars, shows great decrease in excellence in diction and style, the classical purity of diction only occasionally reappearing in some Italian writers. Many English scholars, as Bacon and Newton, wrote in Latin, and the use of this language in text-books and editions of classical authors continued until quite recent times.

Latin has less grace and flexibility but more vigor and precision than Greek. Rigorous in syntax and weighty in diction, it demands absolute clearness of thought, for which it forms the most admirable vehicle of expression.

For other periods of Latin, see below.

The English language also owes much to *Latin*, both directly by derivation from the classical forms and at second-hand through the Norman-French.

United Editors Encyc. vol. xxi, art. *Latin Lang. and Lit.*

Classical Latin did not long remain at the high level to which Cicero had raised it. The aristocracy, who alone spoke it, were decimated by proscription and civil war, and the families who rose in turn to social position were mainly of plebeian or foreign extraction, and in any case unaccustomed to the delicacy of the literary language. Thus the decadence of classical Latin began with the age of Augustus, and went on as the empire declined and receded.

lat'i-tude, 1 lat'i-tūd; 2 lăt'i-tūd, *n.* **1.** *Geog.* Distance on the earth's surface from the equator, measured in degrees of the meridian. **Astronomical latitude** is the amount of curvature of the meridian between the equator and the place, and is measured by the angle that the plumbline makes with the plane of the equator. **Geocentric l.** is the angle that the line of the earth's center makes with the plane of the equator. **Geographical l.** is the astronomical latitude corrected for deviation of the plumb-line due to local attraction. **Geodetic l.** is the diminution of the curvature of the earth or flattening observed as the poles are approached, the length of a degree of latitude increases as one travels north or south from the equator. The following are the lengths of degrees of latitude in various localities:

Degree.	Passing through	Length in English Feet.
0°	The Equator	362,760
40°	Philadelphia, Madrid, Peking	364,554
50°	Vancouver, Winnipeg, Penzance	364,929
60°	Cape Farewell, Christiania, St. Petersburg.	365,536
70°	Disco Island, Nova Zembla, Kara Strait .	366,053

As either pole is 90° distant from the equator, the greatest *latitude* a place can have is 90°. LOCKYER *Astron.* p. 87 (A.)

2. *Astron.* The angular distance of a heavenly body above the plane of the ecliptic, as viewed from some point. It is called, specifically, **geocentric l.** when the point of view is the earth's surface, **geocentric** when at the earth's center, **heliocentric** when at the center of the sun. **3.** A region or place with reference to its distance north or south of the equator; also, figuratively, one's proper place or environment; the range or reach of one's abilities, as, high or low *latitudes* (i. e., places very remote from, or quite near to, the equator); to go out of one's *latitude*. **4.** Extent of deviation from what is exact, proper, allowable, or customary, independence or undue liberty of action or conduct; laxity; as, *latitude* in morals. **5.** Extent of application or meaning, range or scope. comprehensiveness; as, the term *latitude* of a principle.

Hester Prynne . . . had habituated herself to such *latitude* of speculation as was altogether foreign to the clergyman.

HAWTHORNE *Scarlet Letter* p. 239. (H. M. & CO. 1889.)

6. *Surv.* The distance between two lines drawn east and west through the extremities of a course; northing or southing. **7.** Room or space. **8.** [Archaic.] Extent from side to side; width or breadth. [F., < L. *latitudo*, < *latus*, broad.]

— **apparent celestial latitude** (*Astron.*), the apparent angular distance of a celestial object from the ecliptic as seen by an observer — **assuming l.**, the increasing latitude of a heavenly body moving toward the north pole.— **augmented l.**, in Mercator's projection, a parallel of latitude whose distance from the equator is increased in the same proportion that the meridians (drawn parallel to one another) are separated from their normal places: a process necessary to enable a rhumb-line or loxodromic curve to be represented on a chart correctly as a straight line. See MERCATOR'S CHART, under CHART.— **calm l.**, see CALM-BELT, under CALM, *n.*— **celestial l.**, same as LATITUDE, 2.— **geocentric l.**, see LATITUDE, 1 and 2.— **geodetic l.**, the latitude of a place determined by astronomical observations and corrected for station error.— **heliographic l.**, the latitude of any point on the sun's surface, referred to the sun's equator.— **kronocentric l.**, the distance of any point on the planet Saturn measured from the equator or central belt of Saturn, north or south. — **l. by account**, in navigation, the latitude calculated without observation, from the distance and course sailed since the last calculation.— **l. by observation** (*Naut.*), latitude determined from an observation of a heavenly body.— **magnetic l.**, angular distance north or south of the magnetic equator.— **mean** or **middle l.**, the latitude midway between two places on the same hemisphere.— **variation of l.**, a minute change occurring from time to time in the latitude of places on the earth's surface, due to an infinitesimal shifting movement which takes place periodically in the earth's pole of rotation.

lat'i-tu'di-nal, 1 lat'i-tū'di-nal; 2 lăt'i-tū'di-nal, *a.* **1.** Of, pertaining to, or in the direction of latitude. **2.** [Rare.] Pertaining to width or breadth.— **lat'i-tu'-di-nal-ly**, *adv.* With reference to breadth or latitude.

lat'i-tu'di-na'ri-an, 1 lat'i-tū'di-nā'ri-an; 2 lăt'i-tū'-di-nā'ri-an, *a. & n.* **1.** Broad in scope; free from narrowing limitations; comprehensive; hence, not exact or precise.

Torquato Tasso Laureate. (After an engraved portrait by Raphael Morghen.)

lau're-ate, *n.* **1.** The poet officially invested with the title of laureate by the sovereign of England. Originally this title implied service, as the writing of an ode for the king's birthday, but the office is now honorary.

Ben Jonson was the first to perform the duties of laureate, but sir William D'Avenant first held the official title of poet laureate, conferred by letters patent, Dec. 13, 1638. Since then it has been held by John Dryden (1670–1689), Thomas Shadwell (1689–1692), Nahum Tate (1692–1715), Nicholas Rowe (1715–1718), Lawrence Eusden (1718–1730), Colley Cibber (1730–1757), William Whitehead (1757–1785), Thomas Warton (1785–1790), Henry James Pye (1790–1813), Robert Southey (1813–1843), William Wordsworth (1843–1850), Alfred Tennyson (1850–1892), Alfred Austin (1896–1913), Robert Bridges (1913–

In this reign, the first mention of the king's poet, under the appellation of *Laureate*, occurs. John Kay was appointed poet Laureate to Edward IV., . . . *He* [the laureate] is undoubtedly the same that is styled the King's Versifier, and to whom one hundred shillings were paid as his annual stipend, in the year 1351. . . . These only were in general invited to this appointment, who had received academical education, and had obtained a crown of laurel in the universities for their abilities in Latin composition. . . . Thus the king's *Laureate* was nothing more than 'a graduated rhetorician employed in the service of writing.'
T. WARTON *Hist. Eng. Poetry* § 25, p. 401. [W. t. & co.]

2. In former times: (1) A poet publicly crowned with laurel in recognition of his merits, usually by a sovereign. la've-rolle', 1 la've-rōl'; 2 la've-rōl', *n.* [F.] One of a crossbreed of fowl originating in the Houdan district of France and produced by crossing light Brahmas or Dorkings with Houdans. See FOWL. [Colo.

La Ve'ta, 1 la vē'tə; 2 lą vē'ta. A town in Huerfano county, **La-ve'ta Pass.** A mountain pass in S. Colorado, overlooking La Veta pass; 11,554 ft. high.

la'vic, 1 lē'vik; 2 lā'vic (XIII), *a.* Of, pertaining to, or like

La'vi'ge-rie', 1 la'vē'zhə-rē'; 2 lă'vē'zhe-rē', **Charles Martial Allemand** (8/4 1832–11/4 1892). A French cardinal; archbishop of Algiers; first of the French hierarchy to rally to the Republic; founded a society for mission-work among the Arabs.

La-vin'i-a, 1 la-vin'i-ə; 2 la-vin'i-a, *n.* **1.** A feminine personal name. **2.** *Rom. Myth.* Daughter of Latinus and Amata, betrothed to, wedding Turnus, and represented in Vergil's *Æneid,* won by Æneas, who killed Turnus in a duel. **3.** In Shakespeare's *Titus Andronicus,* the daughter of Titus. **4.** [L.] A tropical American nymphalid butterfly (*Junonia lavinia*). [L., a fem. of *Latinus.*]

La-vin'i-um, 1 la-vin'i-um; 2 la-vin'i-ŭm, *n.* [L.] An ancient town in Latium, Italy, said to have been founded by Æneas and named in honor of his wife Lavinia; contains a ruined temple of Venus; the modern **Pra'ti-ca.**

lav'ish, 1 lav'ish; 2 lăv'ish, *a.* **I.** *t.* To give or spend profusely, or perhaps wastefully; make abundant, or wasteful use of; pour out; as, to lavish money; to lavish one's favors; to lavish wealth. **II.** *i.* [Rare.] To fall in torrents, as rain. [< LAVE†, *v.*] **— lav'ish-ly,** *a.* Waste.— **lav'ish-er,** *n.*— **lav'ish-ment,** *n.* Lavishing; waste; act of waste.

lav'ish, *a.* **1.** Spending or bestowing extravagantly; profuse or prodigal; as, *lavish* of his means.

Warwick owed his popularity to his own large, open, daring, and *lavish* nature.

BULWER-LYTTON *Last of the Barons* vol. i, p. 13. [E. & L. 1892.]

2. Bestowed, expended, or existing in profusion; excessive or superabundant; as, *lavish* gifts; *lavish* vegetation. **3.** Wild or unrestrained, as in manner or action.

4. [Prov. Eng.] Rank, as herbage. **lav'y‡.** Syn.: see ABUNDANT.— **lav'ish-ly,** *adv.* **lav'ish-ing-ly‡.**— **lav'ish-ness,** *n.*

lav'ish, *pp.* Lavished. S. S.

La'visse', 1 la'vis'; 2 lą'vĭs', **Ernest** (3/17 1842–1/11 1922). A French historian and professor.

La'voi'sier', 1 la'vwą'zyā'; 2 lą'vwă'zyĕr', **Antoine Laurent** (8/26 1743–5/8 1794). A French chemist; founder of modern chemistry; guillotined.

la-vol'ta, 1 lə-vol'tə; 2 la-vōl'ta, *n.* Formerly, a dance somewhat resembling the waltz or polka, but varied by leaping steps. [< It. *la volta,* the turn; *la* (< L. *illa*), the; *volta,* < L. *volutus,* pp. of *volvo,* roll.] **la-volt'**†; **la-vol'to**†.

To teach *lavoltas* high and easy courses.

— la-vol'ta, *v.*— **la-vol'ta-teer,** *n.* One who dances the lavolta. **la-vol'ter-eer**†.

La'vos, 1 lä'vōsh; 2 lă'vŏsh, *n.* A town in Beira province, Portugal.

La'vras, 1 lä'vrash; 2 lă'vrăsh, *n.* A town in Minas-Geraes state, Brazil.

lav'ro-vite, 1 lav'rō-vīt; 2 lăv'ro-vit, *n.* A variety of pyroxene colored green by vanadium. [< N. *Lavros,* a Russian.] **lav'roffite**†. **lav'ro-wit**‡. DANA *Mineralogy* p. 350. [J. W. '00.]

lav'y, 1 lav'i; 2 lăv'y, *n.* [Scot.] A gullemot.

law, 1 lô; 2 lą, *v.* [LAWED; LAW'ING.] **I.** *t.* To contend with at law; go to law with; prosecute. **2.** [Rare.] To make law or rules for; regulate. **3**†. To enact as law; ordain. **4**†. To expedite. **lawe**†.

II. *i.* **1.** To contend at law; go to law; litigate: now colloquial. **2**†. To study law. [< AS. *lagian,* < *lagu;* see LAW†, *n.*]

law†, *n.* **1.** An obligatory rule of action; specif., a rule of conduct prescribed by the supreme power in a state; a legislative enactment; as, the *laws* of God and man. See CASE†. The origin of all law may be traced to social habit or custom; custom establishing a precedent which later became a law the administration of which in the early ages was vested in the kings and chieftains. During the Roman Republic the process of legislating in assembly (the forerunner of our courts) had its inception, while from the civil law of Rome most of the European nations derived their legal principles and rules, even England having inherited much of her law from this source.

The following distribution of law is that made by Wharton in his *Law Lexicon:*

LAWS.

Between God and Man.	Between Man and Man.	
Natural. Revealed.	National or Municipal.	International.
Constitutional. Canon or Ecclesiastical.	Common Law.	Equity.
Public or Criminal.	Private or Civil.	

2. A system of rules or regulations recognized by men or nations as governing their intercourse one with another; as, *international law;* the Mosaic *law;* English *common law.* **3.** Specif.: (1) In the Scriptures, the Old Testament books containing the laws of Moses; as, the *Law* and the prophets: used in contrast with the new dispensation which began with Christianity. (2) The twofold *God,* as made known in the Ten Commandments or in any one of them. (3) The social condition of stability and order arising from obedience to law whether natural or revealed. **4.** The system of rules applied in common-law courts, as opposed to that in courts of equity. **5.** Trial by legal or judicial process, as, to go to *law.* **6.** The interpretation and application of legal principles or enactments; legal science; jurisprudence; as, expounding the *law;* learned in the *law.* **7.** The legal profession collectively; as, he is in the *law.* **8.** The uniform occurrence of natural phenomena in the same way or order under the same conditions, so far as human knowledge goes; a formal statement of such uniformity in any given class of cases, also, the assumed cause of such uniformity; as, the *law* of the universe; as, the *law* of gravitation. **law of nature†.**

Law is physical, established sequence; intellectual, a condition of intellectual action in order that truth may be reached; and moral, an imperative which determines the right action to the higher life. K.-F. *Vocab. Philos.* p. 737 [ɪɴ. & co. 1878.]

9. A rule established by custom or precedent; as, *laws* of etiquette; a philosophical *law.* **10.** (1) A known or recognized rule of action, as for governing human conduct, emanating from or attributed to the Deity; as, the *law* of brotherly love; the moral *law.* (2) The commandments or revelations of God taken collectively. **11.** A specified method of procedure; a rule of order or progress. **12.** *Math.* The rule or formula by which certain functions vary or according to which certain actions or changes take place. **13.** Any rule or principle made a standard given to a competitor in a race or to a hunted animal; hence, mercy; forbearance; reprieve.

Though space and *law* the stag we lend,
Ere bound we stop or bow my bugle.
SCOTT *Lady of the Lake* can. 4, st. 30, l. 15.

[< AS. *ιagu,* law, < *ιecgan,* lie.] SYN.: canon, code, command, commandment, decree, edict, enactment, formula, mandate, order, ordinance, principle, regulation, rule, statute. *Law* in its ideal is the statement of a principle of right in mandatory form, by competent authority, with adequate penalty for disobedience; in common use the term is applied to any legislative act, however imperfect or unjust. *Command* and *commandment* are personal and particular; as, the *commands* of a parent; the Ten *Commandments.* An *edict* is the act of an absolute sovereign or other authority; we speak of the *edict* of an emperor, the *decree* of a court. A *mandate* is specific for each occasion or purpose; a superior court issues its *mandate* to an inferior court to send up its records. *Statute* is the recognized legal term for a specific *law; enactment* is more vague and general. *Law* is used to speak of algebraic or chemical *formulas,* municipal *ordinances,* military *orders,* army *regulations,* ecclesiastical *canons,* the *rules* of a business house. *Law* is often used, also, for a recognized *principle,* whose violation is attended with injury or loss that acts like a penalty; as, the *laws* of business; the *laws* of nature. In more strictly scientific use, a natural *law* is simply a recognized system of sequences or relations; as, Kepler's *laws* of planetary distances. See JUSTICE; LEGISLATION.—**adjective law,** the law defining or creating the means of enforcing principles of substantive law.—**administrative law,** that branch of public law defining or creating the way in which the active exercise of the powers of government is maintained and conducted. — **Ampère's laws,** laws concerning the mutual attractions and repulsions of electric currents; laws of electrodynamic attraction and repulsion.— **Antifrust laws,** a body of federal or State laws in the United States for the regulation of combinations of capital in business. See SHERMAN ANTITRUST ACT.— **Arago's law,** the law that when radiation is partly reflected at, and partly transmitted through, a transparent surface, the reflected and transmitted portions contain equal portions of polarized radiation, the planes of polarization being at right angles with each other.— **Avogadro's law** (*Physics*), the law that, temperature and pressure being equal, equal volumes of different gases contain the same number of molecules.— **Baer's law,** a law stated by K. E. von Baer, in reference to the rivers of Russia, that any river flowing either north or south will deposit most sediment on the western bank because of the influence upon the water of the eastward rotation of the earth.— **bankrupt law,** see BANKRUPT, *a.*— **baric law of the wind,** the law of relation of direction to pressure, according to which winds blow spirally from right to left.— **Bayes's law,** see BAYES'S LAW. — **Baveno law** (*Crystal.*), that law which produces a twin crystallization, such as is exhibited by Baveno twins.— **Bell's law** (*Physiol.*), the law that the anterior roots of the spinal nerves are motor, the posterior roots sensory.— **biogenetic law,** the generally accepted law that an individual organism recapitulates in its development the successive stages in the racial history of its kind to a greater or less extent.— **Blagden's law** (*Physics & Chem.*), the law that the freezing-point of a solution is lowered in proportion to the quantity of the substance dissolved: so called after Sir Charles Blagden (1784–1820), an English physician. This law is not of universal application.— **Bode's law,** the law that the distances of the planets from the sun are approximately as the numbers in the series 4, 7, 10, 16, etc., which may be formed by adding to each of the numbers in the series 0, 3, 6, 12, 24, etc., the number 4. It fails in the case of the outer planets.— **both laws.** 1. The civil and the canon law: medieval use. 2. In Scotland, both the municipal and the Roman civil law; as, he studied *both laws.*— **Boyle's law,** the law that, as a mass of gas is expanded or compressed under constant temperature, its elasticity or pressure per unit of surface is proportional to its density.— **Brasil law** (*Crystal.*), the law of crystallization producing twin crystals of the type of Brazil twins.— **breast law†,** inherited laws, once administered by Manx deemsters.— **Brewster's law,** a statement, by Sir David Brewster, of the fact that if light reflected from the flat surface of any transparent body be plane-polarized, the tangent of the angle of incidence equals the index of refraction of the body.— **Buys-Ballot's law** (*Meteor.*), a rough statement of the relation between the distribution of barometric pressure and the wind-direction, announced by C. H. D. Buys-Ballot, of Utrecht, in 1857: "Stand with your back to the wind and the barometer will be lowest on your left hand in the northern, and on your right hand in the southern hemisphere."— **canon law,** see *canon,* 1.— **Carlsbad law** (*Crystal.*), the law of crystallization which produces twin crystals of the order exemplified by Carlsbad twins.— **case law,** see *case,* 1.— **ceremonial law** (*Theol.*), law pertaining to the ceremonies of the Jewish Church, as given in the Old Testament.— **Charles's law,** the law of physics that the volume or pressure of a gas increases in direct proportion to increase of temperature: named after Jacques Alexandre César Charles (1746–1823), a French physicist.— **civil law.** 1. The body or system of jurisprudence which the people of a state or nation establish for their government as citizens. 2. The body of the Roman law, received by the governments of continental Europe as the foundation of their jurisprudence also so received in the State of Louisiana.— **commercial law,** same as LAW MERCHANT.— **common law.** 1. The aggregate or body of laws of universal application within a country. 2. Specif., the unwritten law of England, the *lex non scripta,* a system of jurisprudence originating in custom or usage, as distinguished from statutory law, and gathered chiefly from the reports of adjudicated cases and the works of commentators. The common law of England is the basis of the jurisprudence of all English-speaking peoples.

The United States, in their national capacity, have no *common law,* and their courts have not any *common-law* jurisdiction in criminal cases. . . . We do not, under the national government, recognize any *common law,* considered as a source of jurisdiction; while, on the other hand, the *common law,* considered merely as the means or instrument of exercising the jurisdiction given by the Constitution and laws of the Union, does exist, and forms a safe and beneficial system of national jurisprudence.
KENT *Com.* (ed. Holmes) lect. xxvi. p. 339.

— **constitutional law.** 1. The branch of law which relates to the rules and principles that concern the political structure and polity. 2. The positive law which organic law and legislative enactments relating thereto. 3. The law that applies to and governs all matters cognizable under or amenable to the constitution as the supreme law of the land.— **Cornelian law** (*ex Cornelia*), a Roman law established by L. Cornelius Sylla, providing remedies for torts. — **Coulomb's law of electric charges,** the law that the mutual repulsion of two electrified bodies is directly proportional to the product of their charges, and inversely proportional to the square of the distance between the bodies.— **Coulomb's law of magnetic charges,** the law that the force F, exerted between two poles of strengths m and m', is given by the equation $F = \frac{mm'}{r^2} - k$, where r is the distance between the poles and k is a constant.— **criminal law,** that branch or department of jurisprudence which relates to crimes, their repression and punishment. — **crown law,** the English common law in its application to criminal matters.— **Dalton's law** (*Chem.*), the law that in a mixture of gases the total pressure is equal to the sum of the pressures that they would exert separately. Compare DALTONISM.— **Dendy's law,** the law formulated by Walter Dendy, a Dutch oculist, that the eye always assumes the same position in looking at any given object.— **Draper's law** (*Physics*), the law that all solid substances become luminous at the same temperature. This temperature is not fixed, but depends upon the state of the eyes of the observer.— **Dufay's law,** the law that electrified bodies attract repel one another, and that bodies oppositely electrified attract one another.— **Dulong's and Petit's law** (*Chem.*), a generalization stating that the product of the atomic weight of an element and its specific heat is constant: numerically, 6.4.— **Falcidian law** (*lex Falcidia*), a Roman law by which a testator was not permitted to dispose of more than three-quarters of his estate by legacy, the heir taking a quarter to his heirs.— **Falk laws,** enactments by the Prussian diet in 1873 for the regulation of the clergy. See KULTURKAMPF.— **Faraday's laws.** 1. The law that the quantity of an electrolyte decomposed is proportional to the quantity of electricity which passes. 2. The law that the mass of any ion liberated by a given quantity of electricity is proportional to the chemical equivalent of that ion.— **Faraday's law** (*Physics*), a law expressing the influence of the rotation of the earth upon a movable substance, as air or water, on its surface, tending to deviate it eastward when it moves toward the pole, and westward when it moves toward the equator.— **Faraday's law,** the law that the heat developed in a conductor is proportional to the square of the current and to the resistance of the conductor: discovered experimentally by Dr. Joule in 1841.— **Faraday's law,** a system of determining the amount of resistance a ship meets from the water from a knowledge of its dimensions and speed; hence, the amount of power and coal required to drive the ship at a designated speed.— **Galton's anticyclonic law,** a statement of the fact that in regions of high barometric pressure the wind flows outward and opposite to the normal cyclonic direction.— **Galton's law of ancestral inheritance,** the law that offspring derive 1/4 of their heredity from each parent, 1/16 from each grandparent, and 1/64 from each great-grandparent.— **Gay-Lussac's law,** Charles's law.— **gibbet law,** lynch law.— **Gold Standard Law,** the act passed March 14, 1900, by the Congress of the United States, providing that the dollar, consisting of 25.8 grains of gold nine-tenths fine, shall be the standard unit of value, and that the parity value of all money coined or issued by the United States shall be maintained in accordance with this standard.— **Gompertz's law of mortality,** the deduction that advancing age is accompanied by weakness which progresses in geometrical ratio.— **Graham's law** (*Physics*), the law stated in 1833, by Graham, that the rate is inverse proportion to the square root of its density.— **Grassmann's law** (*Philol.*), the law restated, but not first formulated, by H. C. Grassmann in 1863, to the effect that, when there are two successive aspirates occurred in the primitive Aryan language, the first became a medial in Sanskrit, and the second a tenuis in Greek.— **Gresham's law** (*Polit. Econ.*), the law that of two forms of currency the inferior or more depreciated tends to drive the other from circulation, owing to the hoarding and exportation of the better form: as commonly stated, "bad money drives out good": so called from a former master of the English mint.— **Grimm's law,** the law of the permutation of consonants, which was discovered by Erasmus Rask and Jacob Grimm, and is called *lautverschiebung* (sound-pushing or -shifting) in German. This law in brief is as follows: (1) If the same roots or the same words exist in Sanskrit, Greek, Latin, Celtic, Slavonic, Lithuanian, and Old High German, then wherever the Sanskrit or Greek has an aspirate the Gothic has the corresponding sonant mute, and the Old High German the surd. (2) If in Sanskrit and Greek we find a sonant mute, then we find a corresponding surd in Gothic, and an aspirate in High German. (3) If the six first-named languages show a surd mute, the Gothic shows the corresponding aspirate, and Old High German the corresponding sonant mute. Examples are: L. *pater,* Eng. *father,* G. *vater;* L. *tres,* Gr. *treis,* Goth. *ϸreis,* G. *drei;* L. *cornu,* Eng. *horn,* G. *horn;* L. *ego,* Gothic *ik,* G. *ich,* Eng. *I.* These changes have been grouped in the following table:

Language.	Labials.	Dentals.	Gutturals.
Greek, etc.	p, b, ph,	t, d, th,	k, g, kh
Gothic, etc.	f, p, b,	th, t, d,	(h), k, g
Old High German.	ᵇb (v), f, p,	d, z, t,	g (h), ch, k

This principle is exemplified at its best in the High German dialects; for in English and the other Low German languages the consonants have remained in much the same state as in Gothic. In modern German the principles of the law are still at work, although hampered by the inevitable crystallization accompanying a written language. The three parts of the law can be expressed mnemonically by three arrangements of the initials of the words 'aspirate,' 'hard,' and 'soft,' giving the syllable *ash* for the first, *sha* for the second, and *has* for the third.

Grimm's law, a law of great importance and very wide application, affecting nearly the whole consonantal structure of the Aryan languages. MAX MÜLLER *Science of Language* second series, p. 213. [a. 1875.]

— **Haeckel's law,** the biogenetic law.— **Halifax law,** gibbet law.— **Hann's law,** a statement of the regular decrease of moisture in the atmosphere with increase of altitude.— **harmonic law** (*Linguistics*), the law that requires the vowels in a word to be of the same class: thus, *a* and *i* must stand together, but not in conjunction with *e* and *ŭ.*— **Henry's law.** *Physics & Chem.* 1. The law that the quantity of gas absorbed by a liquid is in proportion to the pressure. 2. The law of partial pressures.— **Hess's law,** the basic principle of *thermochemistry,* that *the heat developed by chemical action is the same whether the action be continuous or interrupted.*— **Hinrich's law,** a statement of the theory that the distribution of arid regions, and of regions of copious rainfall, is fortuitous.— **Hooke's law of elasticity,** the law that the ratio of stress to strain is constant.— **Hortensian law** (*lex Hortensia*), a Roman law of 287 B. C., by which the plebiscita were given the force of general laws.— **International law,** the law of nations: also termed JUS GENTIUM.— **Isaurian laws,** a digest of laws issued in 740 at the instance of the Byzantine emperors Leo III., the Isaurian, and his son, Constantine Copronymus.— **Jacobi's law** (*Elec.*), the principle that the maximum power-output of an electric motor occurs when the counter equals one-half the impressed electromotive force.— **Jevons's law,** Jacobi's, German physicist.— **Joule's law.** 1. *Elec.* The law that the rate of heat-production in any portion of a circuit is equal to the resistance of that portion of the circuit multiplied by the square of the current. 2. *Thermodynamics.* In the expansion of gases, the law that when there is no change in the quantity of heat in a given quantity of gas and no external work performed there is no change in the temperature.— **judge-made law.** 1. Law established by judicial precedent. 2. Law arising from the constructions placed by judges upon statutes in particular cases, by which the statutes become discovered in the laws meanings not originally intended, and sometimes have explained them away altogether. often used opprobriously.— **Jurin's law** (*Physics*), the law that the height of a capillary column is inversely proportional to the diameter of the tube.— **Kelvin's law** (*Elec.*), the law that the product of the capacity of a cable-line with its resistance varies with the time required for representing its signalling speed. **K. R. law†.**— **Kepler's laws** (*Astron.*), three important laws found by John Kepler to govern the motions of the planets. (1) The radius vector of each ellipse. (2) Motion in one of the foci. (2) The radius vector of a planet sweeps over equal areas in equal times. (3) The squares of the times of the annual revolutions of the planets are directly proportional to the cubes of their mean distances from the sun.— **Kirchhoff's laws,** laws relating to electric distribution first defined by G. R. Kirchhoff, a German physicist, viz.: (1) The sum of all the electromotive forces in a closed circuit equals zero, if the electromotive force consumed by the resistance is considered as a counter-electromotive force and the electromotive forces are all taken in the same direction. (2) The algebraic sum of all the currents flowing to a distributing *point* is *zero.*— **Kohlrausch's law** (*Physiol. Chem.*), a law formulated by Friedrich Kohlrausch, a German physicist, embodying the principle that the speed of an ion does not depend upon the remaining ions, but upon the solvent agent of the solution and upon the electric potential.— **Kundt's law** (*Physics*), in anomalous dispersion the principle that the index of refraction becomes greater when an absorption band is approached from the red, and smaller if approached from the ultra side.— **law'a-bid'ing,** *a.* Obedient to or abiding by the law.— **law-agent,** *n. Scots Law.* A legal practitioner in Scotland, generally answering to the English solicitor, but not limited or restricted in a legal sense: abused by lawyers.— **law Bible,** the Authorized Version: a term used by Roman Catholics in Ireland.— **law-binding,** *n.* A binding in imitation of sheepskin, used especially for law-books.— **law-blank,** *n.* See BLANK‡, 2.— **law'break'er,** *n.* One who violates the law: a criminal. — **law'break'ing,** *a.* & *n.* = **law-burrows,** *n. Scots Law.* A Security that a person will keep the peace. **2.** A process for obtaining such security. **law-borrowst.**— **law-calf,** *n. Bookbinding.* White calfskin. See LAW-BINDING.— **law-church,** *n.* [Eng.] The established Church, used in disparagement.— **law-court,** *n.* A court of justice.— **law-covenant,** *n.* The Mosaic dispensation.— **law-day,** *n. Old Eng. Law.* **1.** The day for the regular assembling of the sheriff's court; also, the day of holding the hundred or manorial court or the court-leet, held once in a year. **2.** Formerly, the particular day named in a mortgage for paying the money due thereon to save the right of redemption in the mortgagor.— **law-French,** *n.* The corrupt French of English law-books.— **law-hand,** *n.* The handwriting characteristic of, or used in, legal documents; also, manuscripts written in this hand.— **law-language,** *n.* The formal and technical language of legal writings and documents.— **law-Latin,** *n.* The mongrel and barbarized Latin of old English laws and law-books.— **law-list,** *n.* A legal directory containing the names of all those, such as judges, barristers, attorneys, and solicitors, who are officially concerned in or belong to the legal profession.— **law-lord,** *n.* **1.** In England, a member of the House of Lords who has won distinction as a judge or lawyer, and is appointed to deal with the judicial business of the House. **2.** In Scotland, a judge who has by courtesy the title of lord.— **law-lordship,** *n.*— **law mer-**

chant, the body of commercial usages or rules recognized by civilized nations as regulating the rights of persons engaged in trade. Formerly the *law merchant* only included the rules used in staple and merchants' courts, but later these rules and usages became a part of the general law of the land; and hence the *law merchant* covered such matters as insurance, contracts, bankruptcy, etc.—**law of absorption** (*Logic*), the proposition that when one aggregant is embodied in another as a component the two aggregants are equivalent.—**law of acceleration** (*Embryol.*), the theory that the rate of development of an organ is in proportion to its relative importance.—**law of adaptation** (*Sociol.*), the hypothesis that social groups conform themselves universally to environment in social life.—**law of areas,** sameas KEPLER'S LAWS (2).—**law of arms,** the laws of war; laws of chivalry or of knighthood.—**law of Avanzini,** the law that a falling plate tends to fall flat and not endwise, owing to the fact that the air-resistance is greater at the front edge.—**law of Babo** (*Phys. Chem.*), the law predicating the diminution of vapor-pressure due to the solution of a non-volatile solid to be very nearly proportional to the amount dissolved.—**law of constant angles** (*Crystal.*), the law that the angles made by crystal-faces remain constant during the growth of a crystal.—**law of constant heat-sums** (*Phys. Chem.*), the law that when certain compounds are being formed out of others the sum of the heat evolved is not regulated by the manner or variety of the reactions which have to be passed through.—**law of constant proportion,** law of definite proportions.—**law of contradiction,** the principle of contradiction.—**law of cosines.** *Math.* **1.** In plane trigonometry, the law expressed by the formula $a^2 = b^2 + c^2 - 2bc \cos A$. **2.** In spherical trigonometry, $\cos a = \cos b \cos c + \sin b \sin c \cos A$. The letters *a*, *b*, *c* represent the sides, and *A*, *B*, *C* the opposite angles of a triangle.—**law of definite proportions** (*Chem.*), the law that the weight of any component elements in a given definite compound remain, like the elements themselves, chemically invariable, and that such elements retain their stability and proportionate weight in any compound of which they form a part.—**law of diminishing return** (*Econ.*), the theory not established as a law, that profits from a given piece of work do not, beyond a certain definite point, keep pace with the expenditure of time and money on that land.—**law of divides** (*Geol.*), see DIVIDE.—**law-officer,** n. (*Eng.*) = LAW (3), attorney-general. (2) The solicitor-general.—**law-officer of the crown:** **2.** An officer having authority to execute, administer, or enforce the law.—**law of great gain,** the law that it is the general disposition of mankind to accumulate the maximum of advantage with the minimum of service or sacrifice.—**law of great numbers** (*Math.*), the law that the sum of a number of observations tends to average its own law, varies in accordance with the normal law of error with an indefinite increase in the number of elements.—**law of Gulberg Waage,** same as LAW OF MASS-ACTION.—**law of gyration** (*Meteor.*), a law which attributes to winds changes a tendency to assume the same direction as the apparent diurnal motion of the sun.—**law of homogeneity** (*Math.*), the assumption that the higher magnitudes can be added: this theory was advocated by Vieta, but rejected later.—**law of intensity,** Feehner's law.—**law of kind,** the law of nature.—**law of large numbers,** a principle by Maupertuis, Euler, and Lagrange, Fermat's law constituting the celebrated *law of least action,* which has played so important a part in all subsequent investigations in mathematical physics. See FERMAT'S LAW.—**law of mass-action** (*Chem.*), the law showing the chemical action of a substance to be proportional to its active mass as indicated by the molecular concentration or the osmotic pressure.—**law of maximum efficiency,** see SIEMENS'S LAW.—**law of maximum work,** see JACOBI'S LAW.—**Law of Moses** or **Mosaic law,** the Pentateuch.—**law of nations,** international law; the common law of nations regulating their intercourse in peace and their relations in war.—**law of nature.** **1.** See LAW, n., 1. **2.** A natural law.

Pindar speaks of Law as the Ruler of the Mortals and the Immortals, and it seems to be commonly supposed that the see called *Laws of Nature,* in Hooker and Shakespeare, is the Creator. . . . A *law of nature,* as I regard the meaning of the expression, is not a uniformity which must be obeyed by all objects, but merely a *uniformity which in fact,* so far as observed by those objects which may have come beneath our observation. . . . The *laws of nature,* as I venture to regard them, are simply general resultants or consequents of the particular properties which have been observed to hold true of bodies hitherto observed. . . . The assumption is legitimate, if adequate extent, and that no arbitrary interference takes place, we are then able to assign the probability, always less than certainty, that the next object of observation or experiment will conform to the same laws. W. STANLEY JEVONS *The Principles of Science* pp. 737, 738. MACM. '074

3. Same as LAW, 7.—**law of octaves** (*Chem.*), the resemblance of an element to the eighth one before or after when classified according to the periodic law. See PERIODIC LAW; ELEMENT.—**law of parsimony** (*Logic*), a principle in dialectic which restricts the things assumed to such only as are indispensable in explanation of a fact or facts.—**law of partial pressures,** Dalton's law.—**law of recapitulation,** the theory of recapitulation, or of cenogenesis, the hypothesis that social groups have peculiar reciprocal actions and effects upon one another apart from the general action of individuals.—**law of sines.** *Math.* **1.** In plane trigonometry, the law expressed by the formula

$$\frac{a}{\sin A} = \frac{b}{\sin B} = \frac{c}{\sin C} = 2r.$$ **2.** In spherical trigonometry, $\frac{\sin a}{\sin A} = \frac{\sin b}{\sin B} = \frac{\sin c}{\sin C} = k$. The letters *a*, *b*, *c* are the sides and *A*, *B*, *C* the opposite angles of a triangle.—**law of storms** (*Meteor. & Navig.*), the principle that the wind in tropical hurricanes, and frequently in storms of higher latitudes, has two motions—rotary and progressive—the former blowing counterclockwise in the northern hemisphere and clockwise in the southern.—**law of the Medes and Persians,** the prototype of laws that are unchanging and unchangeable or immutable.—**law of thermoneutrality** (*Phys. Chem.*), the law that no thermal change occurs when mixing dilute solutions of neutral salts if no precipitation takes place.—**law of Titius,** Bode's law.—**law of uses,** the statute of uses.—**law of volumes,** Gay-Lussac's law.—**law-reports,** *n. pl.* Published volumes narrating cases and recording the decisions of courts therein.—**laws of honor.** **1.** General established rules of honorable conduct. **2.** The rules governing duels and their preliminaries.—**laws of Manu,** the legal code of the Manavas. See MANU, n., 2.—**laws of Oleron,** a compilation of maritime laws said to have been made and promulgated in the island of Oleron, off the coast of France, during the 12th century. It enters largely into modern maritime law.—**laws of planetary motion,** Kepler's laws.—**laws of successive contacts.** **1.** The law that when several metals form a contact series the potential difference between the extreme members of the series is the same as if these metals were in direct contact. **2.** The law that when a series of metals all at the same temperature forms a closed circuit the algebraic sum of the potential differences in that circuit is zero, and hence there can be no current through the circuit.—**laws of thought** (*Logic*), the fundamental laws or principles of thought—the law of identity, of excluded middle, and of contradiction.—The law of sufficient reason is *often included* in this classification.—**laws of war,** the rules and usages recognized among civilized nations for regulating the conduct of belligerents.—**law of Wisby,** the laws of Wisby in Sweden, which formed the foundation of the governing code of the Hanseatic League.—**law speaker,** the presiding officer of the general assembly of the Icelandic republic, whose duty it was to recite the law of the land.—**law-stationer,** *n.* **1.** A stationer who sells articles required and used by lawyers. **2.** [Eng.] One who takes in manuscript to be copied for lawyers.—**law-worthy,** *a.* Having legal standing or rights, such as may be recognized or dealt with by a court of law.—**law-writer,** *n.* One who writes law-books or abstracts on law; also, one who copies or engrosses legal papers.—**Le Chatelier's law** (*Phys. Chem.*), the law showing that the equilibrium of a system, when displaced by a stress, adjusts itself in such a way as to relieve the stress.—**Lenz's law** (*Elec.*), the law that electric currents induced by change of a neighboring current, or by change of position of a neighboring circuit, have always such a direction as to oppose that change by their dynamic influence.—**Lidford law,** same as HALIFAX LAW.—**Listing's law** (*Psychol.*), the law stating that when the line of regard travels from its primary position into any other position the torsion of the eye in the second position is the same as if the eye had turned about a fixed axis perpendicular to both the first and second positions of the line of regard.—**Malthus's law,** a theory, held by Thomas R. Malthus, that population increases in geometrical progression, while subsistence increases only in arithmetical progression. Later, he stated the law less mathematically and dogmatically, but more as a tendency.—**Malus's law,** the law that if the angle between the planes of incidence on two mirrors be intermediate between 0° and 90° the intensity of the radiation reflected from the second surface will be found to vary as the square of the cosine of the angle between these two planes.—**Marconi's law** (*Wireless Telegr.*), a law stating the signaling distance of simple vertical sending and receiving aerials of equal height varies as the square of the height of such aerials.—**Mariotte's law,** the assumption that the long, slender muscles of a horse produce speed, while short thick ones beteken strength.—**Mariotte's law,** Boyle's law: the name given always in France and occasionally in other countries.—**maritime law,** the body of principles and usages recognized by commercial nations as just and equitable for the determination of questions pertaining to affairs of the sea.—**martial law,** military authority exercised in accordance with the laws and usages of war when the civil authority is wholly or partially suspended, either by proclamation of the actual presence of a military force.—**Maxwell's law** (*Elec.*), the law of the relation between the dielectric constant and the optical refractive index.—**May laws.** **1.** The Russian laws established to forbid Jews to own land were made effective by the Czar's signature May, 1882. **2.** The Falk laws. See KULTURKAMPF.—**Mendel's law,** a law concerning the inheritance of contrasting characters in the parents of cross-bred plants, first discovered by Gregor J. Mendel in 1865. Mendel's experiments on garden peas showed that certain characters of one parent would appear in the hybrid of the first generation to the exclusion of the contrasting characters of the other parent. The former he called *dominant,* the latter *recessive.* In successive generations of the self-fertilized hybrid, the recessive characters appeared in the ratio of one recessive to three dominant. The recessive continued pure (RR), that is, like the recessive parent. The dominants consisted of pure dominants (DD), and those that gave rise to mixed offspring (DR) in the ratio of one pure dominant to two of the latter; that is: n(DD) + 2n(DR) + n(RR). In general, whenever there occurs a pair of differentiating characters, of which one is dominant to the other, three possibilities exist: there are recessives which always breed true to the recessive character; there are dominants which breed true to the dominant character, and are therefore pure; and, thirdly, there are dominants which may be called impure, and which on self-fertilization (or in inbreeding, where the sexes are separate) give the same dominant and recessive forms in the fixed proportion of three of the former to one of the latter. See DOMINANT; RECESSIVE.

Parent-Forms. . . . . D R

—mercantile law, same as LAW MERCHANT.—**Mersune's law** (*Acoustics*), the law that the time of vibration of a string varies (1) directly as its length, (2) directly as the square root of its density, and (3) inversely as the square root of its tension.—**military law.** **1.** That branch of the laws applicable to military service and duties, consisting of the statutes, regulations, and principles by which the army and its affairs are governed. Military law differs from martial law in that the former is the code governing the government of the army and the latter is the application, in exigent circumstances, of the laws of war to all persons within a given district. **2.** Same as MARTIAL LAW.—**moral law,** any rule of right and wrong conduct which, whether regarded as intuitive or derived from a divine source, or from human custom, offers a mandate to the human will.—**municipal law,** the body *of laws for the government of a* state or nation, as distinguished from international law: an elastic term variously interpreted by law-writers.—**natural law.** **1.** The rule of civil conduct supposed to be deducible from the common reason and conscience of mankind; as, the *natural law* of self-defence. **2.** A law of nature. See LAW, 7, 8. See also LAW OF NATURE.—**naval law,** the system of principles and rules regulating the affairs of vessels of war and the conduct of persons connected with them.—**Newton's law of cooling,** the law (not quite accurate) that the radiation of heat from a body in a certain time is proportional to the difference between its temperature and that of the surrounding media.—**Newton's law of gravitation,** the law that every particle of matter attracts every other portion of matter, and the stress between them is proportional to the product of their masses divided by the square of their distance apart.—**Newton's laws of motion.** **1.** The law that "every body continues in its state of rest or of uniform motion in a straight line, unless it be compelled by impressed forces to change that state." **2.** The law that "change of motion is proportional to the impressed force, and takes place in the direction of the straight line in which the force acts." **3.** The law that "to every action there is always an equal and contrary reaction; or the mutual actions of any two bodies are always equal and oppositely directed."—**Ohm's law** (*Elec.*), a fundamental law for determining current-strength—the law that in any electrical circuit the strength of the current is equal to the electromotive force divided by the resistance of the circuit when the current is steady.—**Ohm's Law,** the Law of Vowels.—**organic law,** same as CONSTITUTIONAL LAW.—**palatal law** (*Philol.*), the law which explains how the vowel originally following has formed a palatal consonant instead of a guttural in the Indo-Iranian languages.—**parallelogram law** (*Mech.*), the law that the resultant of two directed quantities represented by two adjacent sides of a parallelogram is the diagonal through their meeting point.—**parliamentary law,** the body of rules recognized or ordained for preserving order and regulating the modes of procedure and course of debate in legislative or deliberative bodies.—**parole law** [U. S.], the law whereby prisoners are released on parole, as long as good behavior continues, before they have served their time.—**Pascal's law,** the law that fluids transmit pressure equally in all directions.—**patent law** [U. S.], the body of law that consists of various acts of Congress relating to the granting of patent rights to inventors.—**periodic law** (*Chem.*), the statement of the natural systematic classification of the elements according to their atomic weights. This law was originally pointed out by Newlands in 1863, and subsequently developed by Mendeleieff, who indicated in his tabular arrangement that at regular intervals the elements exhibit similar chemical and physical properties. Mendeleieff predicted the properties of several elements then unknown, and gallium, scandium, and germanium have since been found to correspond to possess the properties indicated. See table under ELEMENT.—**Poiseuillelan law** (*Geol.*), a law of rectilinear flow of water through soil, expressed by the formula $f = \frac{\pi \cdot d^4}{}$, laid down by Poiseuille in 1840–1842.—**poor-debtor law,** a law providing that any one imprisoned for debt may, by a prescribed procedure and on making oath that he has no property wherewith to pay the debt for which he is in jail, be discharged from arrest.—**positive law,** a rule of action established by legislative enactment; express or statutory law as distinguished from natural or unwritten law.—**Prevost's law** (*Physics*), the law of exchanges, that all bodies above absolute zero are exchanging heat-radiations, the amount of heat radiated by a body depending only upon its temperature, so that bodies at a constant temperature have not ceased to radiate, but are merely receiving as much heat as they give out.—**primary and secondary laws** (*Psychol.*), see under ASSOCIATION.—**prism-law** (*Optics*), the law that a lens that is decentered one centimeter will produce as many prism-dioptries as the lens has dioptries of refraction: discovered by C. F. Prentice.—**prize law,** the rules of jurisprudence recognized among nations, which govern the rights of captors regarding an enemy's property captured at sea in time of war, its condemnation and sale, and the distribution of the proceeds.—**public law,** international law; also, law relating to public as distinguished from private rights.—**Raoult's law** (*Chem.*), the law that when molecular amounts of different substances which are not electrolytes are dissolved in equal quantities of a solvent they depress the freezing point in a like degree.—**real law,** in civil law, a law which relates principally to things as property (especially real estate) and not to persons.—**Rhodian law,** maritime law of the ancient Rhodians.—**Roman-Dutch law,** a system of law based mainly on the Institutes of Justinian and developed by the jurists of Holland: formerly used in Holland, and still used to a great extent in South Africa, Ceylon, and British Guiana.—**Roman law,** the body of Roman jurisprudence, commonly known as the *civil law.*—**shipping law,** that branch of the law which relates to commercial vessels, including their registration, ownership, nature, character, the rights and duties of officers and seamen, charter-parties, mortgages and sales, demurrage, tonnage, and salvage.—**Siemens's law,** the law that the efficiency of the electric circuit is the nearer unity the greater the ratio of the counter-electromotive force developed by the motor itself to that supplied to it by the generator.—**Snell's law,** the law that the sine of the angle of refraction bears a constant ratio to the sine of the angle of incidence for all angles of incidence, the value of the ratio depending on the nature of the two media at the surface of separation between which the refraction takes place, and also on the nature of the incident light.—**sound law,** same as PHONETIC LAW. See PHONETIC, *a.*—**statute law,** a legislative enactment; written law; distinguished from the common or unwritten law.—**Stefan's law of radiation,** the law that the quantity of heat lost by radiation from a black body is proportional to the fourth power of the absolute temperature. Prof. Josef Stefan originally stated it, and Prof. Ludwig Boltzmann independently demonstrated it theoretically.—**Stefan and Boltzmann's law; Stefan-Boltzmann law.**—**Stokes's law** (*Physics*), the law that a substance fitted to emit a certain kind of radiation will also absorb exactly the same kind of radiation. Vapors, for instance, which when glowing have certain spectrum of bright lines, show, when transmitting white light from a hotter body behind them, a spectrum of dark lines, similarly arranged and situated.—**substantive law,** a law defining or declaring rights: distinguished from *adjective law.*—**sumptuary laws,** laws that restrict individual expenditures as to food, clothing, etc.: specifically applied in the United States to laws regulating the traffic in and using liquors.—**territorial law,** same as MUNICIPAL LAW.—**to give the law to,** to control without question; exercise undisputed power over. —**to go to law,** to appeal to courts for the settlement of a matter; enter suit.—**to have the law in one's own hands,** to have power to redress a grievance or wrong. —**to have or take the law of** (or **on**) (Colloq.), to proceed against; sue.—**to lay down the law to,** to declare one's duty or obligation; advise in a dictatorial manner.—**Torricelli's laws.** **1.** The law that the speed with which a liquid issues from an orifice is the same as that which would be produced in the mass by falling freely from the same height. **2.** The law that this speed is directly proportional to the square root of the "head" or the depth of the orifice below the surface. **3.** The law that, since the speed of efflux is independent of the particular liquid used, it follows that all liquids issue under the same head with the same speed.—**to take the law into one's own hand,** to punish an offender without the help or decree of a court.—**Trouton's law** (*Phys. Chem.*), the law that there exists a proportionate relation between the absolute boiling points of certain substances and their molecular heats when vaporized.—**Verner's law,** the law announced by the Danish philologist Karl Verner in 1875, which shows that certain apparent exceptions to Grimm's law were due to the operations of another and even wider law. It shows that the letters *p*, *t*,

k, s, become in the Germanic languages b, d, g, z, or s, if the accent was on a different syllable in the parent language.

At the present day a west Cumberland dalesman says 'fadder' and 'mudder,' but 'brother,' because in the parent-language (as attested by Sanskrit and Greek) the stress was laid on the last syllable in 'patér,' 'matér,' but on the first syllable in 'bhráter.' *Chamber's Encyc.* vol. viii, p. 125. [L. '01.]

— **Volta's law,** see under LIST.— **Von Baer's law** (*Biol.*), the law that in embryonic development the change is from generalized toward specialized forms and conditions, each embryo passing successively through stages of growth representing both the phylogeny and ontogeny of its race.— **Watt's law,** the law that, when two vessels containing the same liquid at different temperatures are connected above the liquid surfaces, the vapor-pressure — which is identical in both of them — is the pressure corresponding to the lower temperature.— **Weber's law,** a generalization made by E. H. Weber, German physiologist, for experience in estimating the relative intensity of sensations, which may be stated as follows: The least noticeable difference in each kind of sense-perception is a constant fraction of the stimulus: found to be only approximately true. As elaborated it has been called the *Weber-Fechner law*, or *Fechner's formula* (which see).

law², *n.* [Scot.] A hill or mount.

Law³, *n.* **1. Edmund** (6/6 1703–8/14 1787), an English clergyman; philosopher; bishop of Carlisle; father of Lord Ellenborough. **2. John,** of Lauriston (4/21 1671–3/21 1729), a Scottish financier; founder of the Mississippi Company, 1717; comptroller of the French finances. See MISSISSIPPI BUBBLE. **3. Jonathan** (8/6 1674–11/9 1750) a colonial governor of Connecticut. **4. William** (1686–4/9 1761), an English theologian and mystic; *Serious Call*, etc. **5. Andrew Bonar** (9/16 1858–10/30 1923), British statesman; Chancellor of the Exchequer, 1916–1918; Premier, 1922–1923; born in Canada.

lawn'-ten"nis, 1 lən'-ten"ɪs; 2 la̤n'-tĕn"is, *n.* A game played with rackets and elastic balls by two, three, or four people, generally out-of-doors and upon a level court, usually of clay or turf.

The ball is struck or served over the net by one of the players (the *server*) into a specified subdivision or court (see illus.), whence it is returned by one of his opponents (the *striker-out*) by striking it on first bound. After this it is struck to and fro over the net either before or on the first bound until it does not fall within the whole court or can not be returned, when the side opposed to the player so failing scores a point. In serving the first failure does not count. The points scored are called respectively *fifteen, thirty, forty, deuce, vantage,* and *game.* (See these words.)

Lawn-tennis Court.
a, b, poles to which the ends of the net, *n, n*, are attached; *d e, c g*, base-lines, 36 feet long; *i, h*, half-court line, 42 feet long; *k l, m n*, service-lines, 27 feet long; *g e, c d*, side-lines for doubles, 78 feet long. (For singles, the inner parallel lines are used as side lines.)

Some terms in the game not self-explaining are defined elsewhere. Used also in court-tennis.

laz"za-ro'ni, *n. sing.* & *pl.* [It. *lazzarone*, < *lazzaro*, < LL. *lazarus*: see LAZAR.] Left door.

l.d.w. [L.] *Litera dominicalis* (dominical letter): *leptis dictum* (elegantly said).

Ldp., Lp., *abbr.* Ladyship; lordship.

L. D. S., *abbr.* Licentiate in Dental Surgery.

le†, *i.* lē; 2 lē, *n.* A Chinese coin or measure; a li.

-le, *suffix.* From ME. *-el*, *-ele* or *-le* representing OE. *-el*, *-ela* for nouns and *-al*, *-ul* or *-el* for adjectives; sometimes also appearing as *-ble*, *-chel*, *-mel*, *-rel*, etc. The original sense of the suffix is probably diminutive in nouns and frequentative in verbs: as in *castle*, *cattle*, *axle* (which come from Latin through OF.), *dazzle*, *hobble*, *niggle*, *paddle*; but many nouns formed with this suffix on many systems denote instrumentality: as *thimble*, *throttle*, or sometimes agency as *beadle*, while adjectives formed thus from verbs have an inceptive force or express tendency, as in *brittle*, *nimble*.

l. e., 1. 2 e, etc., *abbr.* See ABBREVIATION.

lea, 1 lī; 2 lē, *a.* [Prov. or Obs.] Fallow; untilled.

lea†, *n.* A grassy field or plain; any open, unenclosed or level tract of land; lealand. [< AS. *lēah*, meadow.]

The lowing herd winds slowly o'er the *lea*
GRAY *Elegy* st. 1.

lea†, *n.* 1. A varying measure of yarn. See MEASURE. 2. A quantity of wool in a carding-machine. [< LAY†, *n.*, 3.]

lea†, *n.* A scythe.

Lea, 1 lī; 2 lē, **Isaac** (7/ɪ1792–16/ɪ1886). An American naturalist, geologist, and author; *Genus Unio*.

lea., *abbr.* League; leave.

Lea-bhar', 1 la-vār'; 2 la-vär', *n.* [Ir.] A book.

Lea-bhar' nah Ui'dhre, 1 nas wī'thr; 2 nas wī'thr. [Ir.] The Book of the Dun Cow. See under BOOK.

leach†, 1 lich; 2 lēch, *v.* **I.** *t.* To wash by draining; often with *out*; as, to *leach out* ashes.

II. *i.* To come away by draining; as, the liquor *leaches* from the ashes. [< AS. *leccan*, wet.]—**leach'ing**, *n.* 1. The action expressed by the verb *leach*. 2. *Tanning.* The process of extracting some substance, as tan-bark.

leach†, *n.* [Archaic.] To cut (the ingredients of a leach, as meat and eggs) into slices; carve or divide into slices.

leach†, *n.* 1. The material, especially wood-ashes, through which water or other liquid passes, carrying away the soluble portions. 2. A tub or other vessel in which ashes, etc., are leached; a leach-tub; leacher. 3. The act or process of leaching; the separation of soluble matter by percolation. 4. That which is obtained by leaching. 5. A perforated vessel or trough used in making lye from wood-ashes. 6. Same as LEACH-RHINE.

7. *Tanning.* A pit for mixing tan-liquor, as opposed to one (technically termed a "tan-pit") designed for steeping hides. **leech**†.

—**dry'-leach"**, *n.* A leach of which the chief constituent is ground charcoal.—**leach'-bed**, *n.* In salt-making, brine that drops from granulated salt while drying, and is subjected to further boiling.—**l.-hole**, *n.* *Geol.* A crevice created in land or rock by the action of leaching or constant filtration; a hole or outlet formed in land by the process of percolation.—**l.-tank**, *n.* A tank in which metallic ores are leached.—**l.-trough**, *n.* A trough in which ashes or other material are leached by the passage through it of water or other liquid.—**l.-tub**, *n.* A tub in which ashes are leached. **leach'er†**; **leach'ing-vat"†**.

leach†, *n.* *Naut.* Same as LEECH¹.—**leach'-line"**, *n.* A leech-line.—**l.-lining**, *n.* *Naut.* A strip of canvas stitched to the forward side of a sail to take the chafe of the leech-lines.

leach†, *n.* A leash.

leach†, *n.* [Scot.] A miry place; latch.

leach†, *n.* See LATCH-CRAFT†, *n.*—**l.-man**†, *n.*

leach†, *n.* A savory preparation of eggs and sliced meat served in gelatinous form and flavored with almonds or spices and fruits. [< F. *lèche*, slice.]—**white leach**, a leach of isinglass strongly flavored with almonds.

Leach, 1 lich; 2 lēch, **William Elford** (1790–8/ɪ1836). An English physician and naturalist.

lead, *pp.* Leached. S.S.

leach'y, *i.* lē'chi; 2 lēch'y, *a.* Allowing liquids to pass through, as gravelly soil; pervious; porous.

When a soil is too coarsely porous it is said to be *leachy* or humexy. S. W. JOHNSON *How Crops Feed* p. 177. [o. *c.* 00. 1879.]

lead¹, *i.* lid; 2 lēd, *v.* [LED; LEAD'ING.] **I.** *t.* 1. To guide by drawing along, or going ahead and showing the way; as, to *lead* a person by the hand. 2. Hence, to guide by instruction or counsel; as, a pastor *leads* his flock: applied also to circumstance, instinct, motive, etc.; as, instinct has *led* him hither.

3. To show the sense to be *led* by public taste, are, in general, merely outrunning it in the direction which it is spontaneously pursuing.
MACAULAY *Essays, Dryden* p. 30. [A. 1880.]

3. To have the direction of; control; as, to *lead* an expedition; to *lead* a flank or a column. 4. To move before or in advance of; have the first place among; take precedence of; as, he *led* the other runners by 10 feet. 5. To be the head of a movement or undertaking; as, to *lead* an insurrection; direct by example; set; as, to *lead* the fashion; to take or have the initiative in a legislative body; as, he *led* the House. 6. To induce; allure; entice; persuade; as, to *lead* one into wickedness.

The most improper things were done in the conduct of our lives, we are *led into* by the *force of fashion*.
STERNE *Spectator* May 14, 1711.

7. To cause to go in a certain course; conduct; as, to *lead* off water through ditches. 8. To guide one's course through; live or pass through; spend; as, to *lead* an intellectual or a miserable existence. 9. To indicate by going before; give guidance in; as, to *lead* the way. 10. To direct the movements of a band, choir, etc.; conduct, as an orchestra. 11. To compel (one) to go through; make (one) to follow in; drag (one) through or into; as, he *led* me a great chase; to *lead* one a lively dance. 12. *Scots Law.* To adduce; as, to *lead* evidence. (2)† To bring, as an action. 13. To guide or draw, as a rope, wire, etc., over or through a block, hole, etc. 14. In cards and dominoes, to play first in a round or trick; as, to *lead* an ace. 15. *Pool.* To carry in a conveyance; convey; transport. 16†. To guide with reins, as horses; drive.

II. *i.* To act as guide or conductor; have charge or management; have the chief or most advanced place; exercise a ruling or guiding influence.

Lead on, then, where thy bower O'ershades.
MILTON *P. L.* bk. v, l. 375.

2. To extend or reach; afford a way or passage; tend; as, the path *leads* to the river; idleness *leads* to ruin.

Of all the dispositions and habits which *lead* to political prosperity, Religion and Morality are indispensable supports.
WASHINGTON in Sparks's *Writings of Washington, Sept. 17, 1796* in vol. xii, p. 227. [A. s. co. 1837.]

3. To be guided or led; as, the horse *leads* easily. 4. To make the first play at cards or dominoes. 5. In bell-ringing, to begin a change afterward taken up by other bells. 6. *Naut.* To admit of being guided: said of a rope [< AS. *lædan*, lead, < *lǣdhan*, go.]

Syn.: be at the head of, conduct, convey, direct, escort, excel, go before, guide, head, outstrip, precede, surpass. See ACTUATE.—**Ant.:** ape, chase, come after, come behind, copy, follow, go after, go behind, imitate, obey, pursue, succeed.—**Prep.:** *lead by* the hand; *in, from,* or *out of* the way; *lead to* a result, town, etc.; *lead up to* a conclusion, *away from, out of* danger, *through* perils.

— **lead out** (*Naut.*), an order given to lay out a rope on the deck ready to be used. **lead the way,** to go first, to help to be an old maid; die unmarried.— **to l. astray,** to draw into error; specif., to seduce.— **to l. away.** 1. Same as TO LEAD ASTRAY. 2. To cause to follow thoughtlessly: generally in the passive; to be led away, led astray, misled.— **to l. fair,** to extend in a perfectly straight line without interference: said of a rope.— **to l. in.** 1. To introduce. 2. [Prov. Eng.] To put under cover; house, as grain.— **to l. in prayer,** to offer public prayer aloud.— **to l. it away** [Archaic] (*Naut.*), to sail or take a course in a certain direction: as, *we lead it away* to Malta.— **to l. off** or **out.** 1. To make a beginning; go or act first. 2. To take one's partner to the dance.— **to l. on.** 1. To draw on or tempt, especially to evil. 2. To direct or draw to some point of outcome, as in conversation.— **to l. the van,** to go first; be foremost.— **to l. the way,** to act as guide.— **to l. through** (*Card-playing*), to discount a second player's strength by a lead which forces him to take the trick with a high card or allow the third player to do so with a low one.— **to l. up,** to go first; as, *to lead up* the ball. — **to l. up to.** To bring about gradually, as a result; introduce gradually, as a topic. 2. *Card-playing.* (1) To play a card with a view to bringing out other cards. (2) To lead in a manner which will allow one's partner to take a trick with a weak card from which he holds.

lead[2],] l ēd; 2 lēd, *v.* **I.** *i.* 1. To cover, fasten, fit, fill, **leds,**] weight, or join with lead. 2. *Print.* To separate, as lines of type, with thin metal strips, or leads. 3. *Ceram.* To glaze with powdered metallic lead ore. 4. To ease or smooth the lands of (a rifled gun) by a lead lap. **II.** *i.* 1. To clog or fill up with lead: said of rifle-grooves. 2. To take soundings with the lead.

— **leading in,** the process of uniting panes together by leaden strips.— **to lead up,** to put together, as the parts of a stained-glass window, by leaden strips.

Lead,] l ēd; 2 lēd, *n.* **I.** A Position in advance or at the head; leadership; precedence; authority; also, the distance, time, etc., by which anything precedes; as, to take the *lead;* to get a *lead* of twenty yards.

I suspect they mean, that they should take a sort of *lead* and set an efficient part in this war, both with men and money.
BURKE *Works, Letter, Oct. 8, 1777* in vol. v, p. 451. (R. G. & N. 1855.)

Specif., in steam-engines: (1) The amount of opening of a steam-port when the piston-valve of the crank is on the LINEAR LEAD. (2) Angular lead. (3) Crank-lead. See phrases.

2. The act of leading, guiding, or conducting; guidance; direction; as, to give a *lead* in a hunting-field.

3. In cards and dominoes, the right to play first in a trick or round; the card, piece, or suit played first; as, it is *your lead;* trumps would be a *good lead.* **4.** The leading rôle in a play; also, the actor of such a rôle. **5.** A way or passage; specif., a water-channel or passage through ice, made by the pressure of the wind and tides.

There is no possibility of getting supplies unless a '*lead*' opens in the ice and allows a steamer to get along the coast.
EDITH BLAKE in *North American Review* June, 1891, p. 718.

6. *Mining.* A lode. In Australia the term is restricted to alluvial mining, and denotes an old river-bed where gold has been found.

The number of feet along the '*lead*' which a claim may embrace, is decided by the miners, and varies greatly in different states.
A. D. RIMMER *Round the Globe* 1870, p. 335. [MS. & CO.]

7. *Naut.* The course of a rope from one end to the other; as, a *fair lead* or a foul *lead.* **8.** *Civ. Engin.* The distance earth must be hauled from a cut to a bank or fill; also, the sum of the distances covered in computing the cost of an earthwork. **9.** *Elec.* (1) A main conductor in electrical distribution. (2) See ANGLE OF LEAD, below. (3) In an alternating-current circuit, the precedence of phase of one electric wave over another. **10.** *Mech.* The overlap of a valve on the valve-face. **11.** *Mus.* (1) A short passage to be given by a single voice or part introductory to the others, usually consisting of the theme or subject; also, the execution of such a passage. **12.** *Horol.* The inclination of the teeth of a wheel, in impelling another tooth or a pallet. **13.** *Logging.* A snatch-block with a hook by which it is fastened to stationary objects for guiding the cable by which logs are dragged. **14.** *Golf.* The play which precedes. **15.** *Curling.* (1) The player who opens the game. (2) The stone with which the play is thus opened. (3) The course pursued by the stones in play. **16.** Anything that leads or guides; specif., (1) A dog-collar. (2) An artificial watercourse, as a mill-race. (3) Some natural object by which one directs his course. (4) A railroad-track between a switch and a frog.

17. In business, something that leads to a prospective purchaser, as a card, pamphlet, etc. **18.** A "harrow" or flock of wild fowl on the wing. **19.** Heaviness; immobility. **20.** *Masonry.* In arches and spiral mechanisms, the distance (parallel to the axis) a given point moves upon one complete turn. **21†.** A following.

— **angle of lead** (*Elec.*), the angle expressing the displacement in the phase of the current which has to be given to the brushes on the armature of a dynamo in order to compensate for the lag. This is known as a **positive lead.** The brushes of a motor are displaced in the opposite direction, giving what is termed a **negative l.**— **angular l.,** the angular distance through which the eccentric moves, in opening a valve for the admission of steam, before the beginning of the piston-stroke.— **arctic l.** a lead through ice, marking the edge of the continental shelf of North America, where it sinks into the Arctic ocean.

Success in the attainment of 90° North would not inevitably carry with it the safe return. We had learned that on recrossing the *big lead* in 1906.
ROBERT E. PEARY *The North Pole* p. 41. [P. A. S. CO. '10.]

— **blind l.** 1. A blind alley. See BLIND. 2. *Mining.* A lead not appearing at the surface.— **blue l.** (*Mining*), the bluish auriferous gravel and cement deposit found in the ancient river-channels of California.— **crank-lead,** *n.* The angular distance in excess of 90° by which one crank precedes another in the same shaft.— **deep l.** (*Mining*), a lead, as in a former river-bed, discovered only in deep mining.— **to haust·l.** or **inside l.** 1. In a steam-engine, the distance that an ordinary slide-valve is opened for exhaust before the piston reaches the end of the stroke. 2. The time at which prerelease takes place.— **forward l.** (*Elec.*), in a motor or generator, a movement of its brushes from the neutral position in the direction of rotation of the armature.— **hysteretic l.** (*Elec.*), in an alternating current, the difference of phase between the magnetic flux and the magneto-motive force, in consequence of which the lag of the current is less. —**irregular l.** (*Whist & Bridge*), a lead not in conformity with the laws laid down by authorities, as the 2 led from Jack, 10, 9, 7, and 2.— **lead·'shar",** *n.* A swing-bar to which are fastened the side-straps of a leader in a four-in-hand.— **l. of a brush** (*Elec.*), same as ANGLE OF LEAD.— **l.-off,** *n.* The beginning; the first of a succession or series. 2. The opening or attacking movement, especially in bouts of skill or strength.— **l. of the ignition** (*Mech.*), in an internal-combustion engine, the distance which the piston lacks of completing the compression-stroke of the cycle, or the corresponding angular displacement of the crank, at the instant the charge is fired.— **l.-on,** *n.* The inclination of the rails of a railway lead.— **l.-reins,** *n. pl.* The reins by which the leaders in a tandem or four-in-hand are driven.— **l.-screw,** *n.* An accurate lengthwise screw on a lathe, for moving the tool-carriage regularly lengthwise.— **lead'stone",** *n.* Lodestone.— **l.-track,** *n. Railroad.* A track between the yards and the main line.— **lead'way",** *n.* A path leading to a special spot or goal.— **linear or outside l.,** in a steam-engine, the linear distance that a valve is moved to open its port before the stroke begins. See LINEAR LEAD. (*Steam-engin.*), the amount of distance through which the crank has to pass beyond a dead-center before the valve admits steam to the piston.— **opening l.** (*Whist & Bridge*), the selection of the suit by the eldest hand for the attack.— **stringer l.** (*Mining*), a small vein of ore which is supposed to lead to large deposits. —**to throw the l.** (*Card-playing*), to force an opponent to take a trick, so as to make him lead to one's advantage.

lead[2],] l ēd; 2 lēd, *n.* **I.** *Chem.* A soft, heavy, inelastic, malleable, ductile, bluish-gray metallic element. See ELEMENT.

Lead was known to the ancients, and is mentioned in the Book of Job. It is seldom found native; but its ores are common, especially the sulfid, the mineral galena, which, it is said, was used as a *glaze for pottery* in the time of Solomon. The Romans smelted its ores and cast the metal into pigs; and water-pipes, weights, etc., of their manufacture are frequently found. It now finds extensive use in the manufacture of white-pigments as carbonate and sublimed, in medicine and as pigments. Its ore occurs largely in Europe, notably in Great Britain, Germany, and Spain, while in the United States the Mississippi valley and Missouri stand as smelting ore of the foremost metalliferous districts.

2. Any one of various articles made of lead or its alloys. (1) *Print.* A thin strip of typemetal, less than type-high, used in composition to separate lines. Leads are named according to their sizes; as, **thick leads** and **thin leads;** or from their thickness in points, as **one-point leads** (1 pt. or en thick), **two-point leads** (two ems thick), **three-point leads,** etc. (2) A mass of lead used in sounding depths at sea.

There's a shade of doubt on the captain's brow,
And the pilot watches the heaving *lead.*
WALTER MITCHELL *Tacking Ship Off Shore* st. 2.

(3) *pl.* Leaden sheets or plates used in covering roofs, as of churches; thence, [Eng.], a flat, lead-covered roof.

This tower consists of chamber upon chamber, the upper one of all opening on the *leads* above the gateway. DIZZARD BALCH *Old England Sketches, Oxford* p. 33. [MACM. 1890.]

(4) One of the cames in a diamond-paned window. (5) [Dial.] (*a*) A brewers' caldron, dyers' vat, or any other form of large kettle or boiler, formerly made of lead, but now of any material. (*b*) A milk-pail or -pan or other dairy utensil made of lead. (6)† A lead pipe; a leader.

3. Plumbago; graphite as used in lead-pencils: commonly called **black lead.** **4.** A small cylinder of graphite for use as a pencil. **5.** A mixture of lead carbonate and hydrated lead oxid, used as a pigment; white lead. **6.** The tin socket of a knitting-machine needle. [< AS. *leád,* lead.]

— **black lead,** same as LEAD, 3.— **blue l.** 1. Same as GALENA. 2. Imperfectly carbonated metallic lead.— **chemical l.** lead suitable for sealing chemical and other joints in which freedom from alloys is an essential.— **chocolate l.,** a pigment made by calcining lead oxid with about one-third of copper oxid and reducing the mixture to a fine form until combination.— **corneous l.,** same as HORNBERNITE. — **corroding l.** (*Metal.*), refined lead, sufficiently pure for the corroding process, by which white lead is manufactured. — **hard l.,** lead in the impure state in which it leaves the smelter; also lead containing up to 24 per cent. of antimony. — **Krems or Kremnitz l.,** white lead; Vienna white.— **lead acetate** (*Chem.*), a salt of lead; sugar of lead.— **lead'ash",** *n.* Slag of lead; litharge; lead monoxid.— **l.-bath,** *n.* A furnace in which gold or silver ores are smelted with lead.— **l.-burning,** *n. Plumbing.* The uniting of pieces of lead either by fusing them by a blowpipe-flame or by soldering them together with hot lead.— **l.-colic,** *n.* Painters' colic. See COLIC.— **l.-color,** *n.* A dull, bluish-gray color resembling that of lead.— **l.-colored,** *a.* — **l.-comb,** a leaden hair-comb, which tends to dye the hair.— **l.-eater,** *n.* [Prov. Eng.] India-rubber.— **l.-encephalopathy,** *n. Pathol.* Same as LEAD-POISONING, 2.— **l.-encephalopathy,** *n.* Same as LEAD-POISONING, 1.— **l.-flat,** *n.* A flat roof covered with sheet lead.— **l.-foot,** *a.* Leaden-footed; heavy; slow.— **l.-glance** or **l.-glimmer,** *n.* Galenite, or GALENA.— **l.-glaze,** *n.* A glaze produced by powdered lead ore.— **l.-gray,** *a.* Having a gray color like that of lead. **lead'en-gray"†,**— **l.-gray,** *n.* — **l.-lap,** *n.* A gem-cutters' lap, of lead, copper, or iron; also, the entire machine.— **l.-lidded,** *a.* Lead-lidded; drowsy.— **l.-light,** *n.* A diamond-paned window. See LEAD, 2, (2) (4). Also used attributively.— **l.-line,** *n.* 1. *Naut.* A line for taking soundings. 2. *Petrog.* A mineral vein shown by certain white or colored strips, called *marks,* twisted or knotted into the line at irregular intervals, or by knots in the line itself, as at 1, 2, 3, 5, 7, 10 fathoms, etc. The intervening unmarked fathoms are called *deeps.* 2. The lower marginal rope of a net, to which the leaden sinkers are attached; foot-rope. 3. *Pathol.* A blue discoloration of the junction of the teeth and the gums: a symptom of chronic lead-poisoning.— **l.-luster,** *n.* Lead oxid, used as a glaze for ceramic ware.— **l. narcasite** (*Mineral.*), a native lead sulfid.— **l.-pencil,** *n.* A pencil-shaped implement for marking, used by miners, blende and mock lead or mock ore.— **l.-mill,** *n.* 1. A mill for grinding white lead. 2. A leaden disk charged with emery for grinding gems.— **l.-nail,** *n.* 1. A small nail for fastening leads on roofs. 2. A scupper-nail.— **l.-ocher,** *n.* Massicot.— **l.-palsy,** *n. Pathol.* Paralysis of the extensor muscles of the arm resulting from lead-poisoning.— **l.-paper,** *n. Chem.* Paper treated with lead: used as test paper for acids.— **l.-paralysis,** *n.* Paralysis resulting from lead-poisoning.— **l.-pencil,** *n. A.* pencil made of black lead, usually incased in wood.— **l.-plant,** *n. Bot.* A low shrub (*Amorpha canescens*) of the bean family, found in the western part of the Mississippi valley, and said to prefer localities where lead ore is found.— **l.-poisoning,** *n. Pathol.* A morbid condition produced by the cumulative introduction of lead into the system. It is common among painters and lead-workers. The symptoms are very severe colic, anemia, muscular paralysis, etc. The antidotes are Epsom salts, milk, and poultices.— **l.-pot,** *n.* A pot or crucible for melting lead.— **l.-reeve,** *n. Mining.* An officer before whom aggrieved miners lay their complaints.— **l.-rheumatism,** *n.* Neuralgia and spasmodic pains caused by lead-poisoning.— **l.-shaving machine,** in white-lead manufacture, a machine filled with rotary knives for shaving the metal.— **l. soap,** same as PLASTER.— **Leads of Venice,** cells in the attic of the Doges' palace in Venice where formerly political prisoners were confined: destroyed in 1797.— **l.-spar,** *n.* Same as CERUSSITE.— **l.-sugar,** *n.* A compound formed by the action of atmospheric oxygen upon bran.— **l.-tracery,** *n.* The leaden cames in an ornamental window glazed in cames.— **l.-tree,** *n. Bot.* A tropical American tree (*Leucæna glauca*) of the bean family, cultivated for ornament in southern Europe and other warm climates. 2. A crystalline deposit of metallic lead on zinc that has been placed in a solution of acetate of lead. — **l.-vitriol,** *n.* Same as ANGLESITE.— **l.-water,** *n.* A dilute solution of lead subacetate as used in pharmacy. — **l.-wash** [= **l.-work,** *n.* Plumbing material and all work performed by plumbers in connection with buildings and house-decoration, particularly as applied to glazing.— **marking-l.,** *n.* Same as LEAD, 3.— **milled l.,** sheet lead.— **mock l.** (*Mining*), same as SPHALERITE.— **orange l.,** a derivative of white lead used as a pigment (Pb$_3$O$_4$).— **pencil-l.,** *n.* Black lead.— **pig l.,** commercial lead in large oblong masses, or pigs.— **pot-l.,** *n.* Graphite; a misnomer.— **puce l.,** brown oxid of lead (PbO$_2$).— **red l.,** minium.— **sheet l.,** lead rolled into sheets.— **silver l.,** lead containing silver.— **to arm the l.,** to put tallow in the cavity of a sounding-lead in order to ascertain the nature of the bottom from the substances adhering.— **white l.** 1. A pigment composed of approximately 2 parts lead carbonate and 25 per cent. hydrated lead oxid, and prepared by several processes, as the **Dutch,** or **stack, process** (the action of acetic-weed vapor, carbonic acid, and oxygen upon metallic lead), the **French process** (the precipitation of the basic carbonate of lead by the action of carbon dioxid upon a basic salt of zinc, usually the sulfate), or **chamber, process** (by subjecting metallic lead plates to the action of steam, carbon dioxid, and acid vapor). 2. Native carbonate of lead: cerussite.

lead'a-bi(e)",] lēd'ə-bi; 2 lēd'ə-bi, *a.* Capable of being led.— **lead'a-bi(e-ness",** *n.*

lead'age,] lēd'ij; 2 lēd'āj, *n.* The distance coal has to be hauled from the mine to its place of shipment. Compare LEAD[2], *n.*, 8.

lead'back",] led'bak'; 2 lēd'bāk', *n.* [Local, U. S.] *Ornith.* The American dunlin.

lead'bes(t)er,] led'bĕs'tər; 2 lēd'bĕst'ər, *n.* [Austral.] A cockatoo (*Cacatua leadbeateri*). MORRIS *Austral English* pp. 264, 265. [MACM. 1898.] **leadbeater's cockatoo†.**

Lead City,] led 2 lēd. A town in Lawrence county, S. Dak.

lead'coal'ite,] led'kōl'īt; 2 lēd'kōl'īt, *n.* See under LEAD, 2.

lead'ed,] led'ed; 2 lēd'ed, *pa.* 1. Separated by leads, as type. 2. Set in lead; as, a *leaded* window. 3. Covered with lead; as, a *leaded* roof. 4. Covered or coated with lead.

lead'en,] l ēd'n; 2 lēd'n, *v.* **I.** *t.* To render heavy, dull, or **lead'ens,**] uninteresting. **II.** *i.* To weigh down heavily, as if with lead.

lead'en, *a.* 1. Made or composed of lead; as, a *leaden* pipe. 2. Having a color like that of lead; as, a *leaden* sky. 3. Heavy, as in weight, movement, disposition, or manner; dull or sluggish; base in quality; as, an inert, *leaden* mass; *leaden* footsteps.

Leaden is frequently used as the first element in compound adjectives; as, **leaden-footed, l.-gray, l.-hearted, l.-headed, l.-paced, l.-sleeping,** etc.

[< AS. *leáden, < leád,* lead.]— **lead'en-ly,** *adv.* In a leaden way: as with lead; with the effect of lead; as, the blow fell *leadenly.*— **lead'en-ness,** *n.* The quality or condition of being leaden: also figuratively; as, the *leadenness* of his comprehension was disheartening.

lead'er,] lēd'er; 2 lēd'er, *n.* 1. One who leads or conducts; one who takes the chief or prominent place; especially, one fitted by force of ideas, character, or genius, or by strength of will or administrative ability, to arouse, incite, and direct men in conduct and achievement; a guide; director; commander; as, the *leader* of a political party.

lead'ville, 1 led'vil; 2 lēd'vĭl, *n.* A city, the county-seat of Lake county, Colo.; altitude over 10,000 ft.

lead'wort', 1 led'wûrt'; 2 lēd'wûrt', *n. Bot.* A European acrid and blistering perennial herb (*Plumbago europæa*), with pale-blue flowers; also, any plant of the genus *Plumbaginaceæ*; also, any plant of the same genus or family.

lead'y, 1 led'i; 2 lēd'ĭ, *a.* Resembling, containing, or having the appearance of lead.

leaf, 1 lif; 2 lēf, *n.* **I.** *t.* 1. To protect from the sun with leaves, as a plant. [Rare.] To adorn or cover with leafage. 3. (1) [U. S.] To turn or run through the leaves of a book. (2) To turn over the leaves of; to put forth or produce leaves: frequently with *out*.

leaf, *n.* [LEAVES, 1 livz; 2 lēvz, LEVES†, *pl.*] 1. *Bot.* A lateral appendage or member borne by the stem or axis, considered as a bud expansion and extension of axis-tissues.

Simple and Compound Leaves.

In its most common form, it is usually large, broad, and mainly made up of chlorophyll-bearing cells in which work is carried on the process of assimilation or the transformation of inorganic into organic material. A leaf consists usually of the expanded portion called the **lamina** or **blade** and its slender support, called the **petiole, leafstalk,** or **footstalk.** When without a petiole, a leaf is said to be **sessile.** A complete leaf, that is, one having all the parts that can belong to a leaf, has also latest or stipules, commonly a pair, called **stipules,** at the base of the leafstalk. The other leaf-forms include bracts, scales, floral envelops, floral organs, tendrils, spines, and pitchers. Leaves originate only from embryonic plant-parts — from the embryonal vegetative cones, which are apices of shoots. A shoot's growing-point in the great majority of cases has an unlimited growth, while a leaf's growth is rigorously limited. In monocotyledons the leaf-base forms a sheath around the stem; but this development is much less common in dicotyledons. Between the upper and the under leaf-surface lies the **mesophyl** or internal tissue. Just under the epidermis are two or three layers of parallel chlorophyl-containing cells, lengthened perpendicularly to the leaf-surface: these are the **palisade cells.** Beneath these extends the **spongy parenchyma,** a loose tissue, forming a wide-meshed network. Strands known as **veins,** or **nerves,** traverse the leaf-blade. On the lower side they often form **ribs.** If the median vein, or nerve, is more fully developed, it is termed the **midrib.** **Lateral nerves** spring from each or more main nerves.

Every leaf . . . connects its work with the entire and accumulated result of the work of its predecessors. Their precise construction served it during its life, raised it towards the light, gave it more free sway and motion in the wind, and removed it from the noxious influences of rain and frost. Every leaf, in leaves of small but well labored thread, adding, though imperceptibly, yet essentially, to the strength, from root to crest, of the trunk on which it lives, and finally, to the total results for future species in succeeding races of *leaves*.

RICHARD MOLDEN *Painters* vol. v, pt. vi, ch. 3, p. 81. [W. & S. 1875.]

2. Foliage collectively; leafage; specif., the leaves of the tobacco- or the tea-plant when gathered for curing or sale. 3. Something resembling a leaf in being broad, thin, and flat, or in being movably attached, by an edge or an end, to something else. (1) A single division of a folded sheet of paper or the like, as in a book, or a single unfolded piece; hence, what is written or printed on a leaf. (2) A hinged, folding, or sliding part or section, as of a table, door, gate, screen, or folding fan.

These doors be made with *two leaues*, never locked nor bolted, so easie to be opened, that they will follow the least drawing of a finger, and shutte againe alone.

T. MORE *Utopia* tr. by Robinson, bk. ii, p. 79. [A. M. & S. 1869.]

(3) A very thin sheet or plate of metal, as gold; also of marble, horn, etc.

Gold is beaten into *leaves* so thin that one million of *leaves* measure less than an inch in thickness

B. SILLIMAN, JR. *Physics* § 19, p. 8. [BL. & CO. 1867.]

(4) A layer or fold of fat, especially over the kidneys. (5) An architectural ornament resembling a vegetable leaf; a foil; foliation. (6) A flap.

Harry let down the *leaf* of his hat, and drew it over his eyes to conceal his emotions.

HENRY KINGSLEY *Fool of Quality* vol. ii, p. 202. [G. & J. 1800.]

(7) A tooth of a gear-pinion, especially if the pinion is small. (8) A loom-harness; shaft. (9) [Rare.] A hinged platform serving as a boat-landing or part of a bridge. (10) A cylinder-shaped piece forming the core of a hollow candle-mold. (11) The leaf-shaped trowel or tool of a molder. (12) A pour of a curve-like in shape. (13) A hinged sight attached to a rifle-barrel, for the correct, horizontal sight usually used. (15) A thin layer or blister formed by the evaporation of soap by boiling.

II. [Anglo-Ir.] The brim of a hat. **5.** *Weaving.* The frame to which heddles connected by the same shafts and operating at the same time. **6†.** A disorder of lambs caused by eating leaves. [< AS. *leáf*, leaf.]

—**coppery leaf,** a leaf that through the attack of a red spider (*Tetranychus cinnabarinus*) devitalizes locally become copper-colored.—**cornute l.,** a leaf with a projecting midrib forming a spine or horn.—**floral l.,** a division of the perianth: a segment of a sepaloid or petaloid leaf or bract; a leaf extending a flower.—**Florence l.,** a decorative foil of yellow alloy.—**French l.,** hard yellow brass-leaf.—**in full l.,** covered with foliage.—**in the l.,** in the condition of leaf for curing of tobacco.—**latticed leaves,** leaves perforated with lattice-like holes; cancellate leaves. See figs. under LATTICE-LEAF.

—**leaf-bar,** *n. Mech.* A bar or grid formed in various parts of cotton-machinery to comb out leaves and other extraneous matter from the fiber.—**l.-base,** *n.* The part of a leaf-stalk remaining within the trunk or stem after the leaf has fallen.—**l.-bearing,** *a.* Having appendages not unlike a leaf: said particularly of *Phyllodoctæ*, a family of errant annelids, possessing on either side of the body a number of foliaceous appendages.—**l.-birth,** *n. Teratology.* An act of shooting forth leaves; foliation.—**l.-blade,** *n.* The lamina or expanded portion of a leaf.—**l.-blight,** *n.* A disease of plants caused by certain fungi; also, the fungi themselves; as, the *leaf-blight* of almond, buckwheat, tobacco, etc.; see BLIGHT.—**l.-blotch,** *n.* A plant-disease caused by certain fungi and characterized by discoloration and destruction of the foliage.—**l. brass,** same as DUTCH METAL.

—**l. bridge,** a bridge with one or more hinged leaves by which to open the channel.—**l.-bud,** *n.* A bud which develops into a leafy branch, as distinguished from a flower-bud.—**l.-bug,** *n.* A small tingitid bug destructive to the leaves of trees.—**four-lined l.-bug** (*Paciloscapus lineatus*), a destructive bug found in the United States, which injures gooseberry-bushes, currant-bushes, and garden plants generally, boring holes in the leaves and shoots and sucking the sap or juice.—**l.-bunch,** *n. Bot.* A fibrous bundle which after traversing one internode runs into the leaf.—**l.-butterfly,** *n.* A butterfly, as of the Asiatic genus *Kallima*, that has a distinct resemblance in the color or form of its wings.—**l.-canopy,** *n. Forestry.* See CROWN COVER.—**l.-chafer,** *n.* A scarabæoid beetle which in the larval state feeds on foliage, as the cockchafer.—**l.-climber,** *n.* A plant which climbs by means of leaves.—**l.-cone,** *n. Forestry.* See LITTER.

—**l.-crumpler,** *n.* A phycitid moth whose larvæ feed on the leaves of plants and make cases for themselves by crumpling and fastening leaves; as, the *Nola*-moth, *leaf-crumpler* (*Phycis nebula*).—**l.-curl,** *n.* A disease produced by a parasitic fungus (*Exoascus deformans*) which grows on the leaves of certain stone-fruits.—**l.-cutter,** *n.* A bee, as of the genera *Megachile* and *Anthocopa*, that cuts or bites out rounded pieces of leaves, with which to form a case, as *M. centuncularis* of Europe and North America, in which to rear its young; also, a cutting, as is customary with certain plants.—**l.-cutting ant,** one of various tropical American genera, as *Atta*, *Cyphomyrmex*, etc., which snip bits out of leaves and carry them underground into the ground-nests in great quantities, there to be piled up into beds upon which to cultivate the fungi upon which they feed.—**l.-cutting bee,** a large wild bee of the genus *Megachile* whose habit it is to cut circles out of rose-leaves which it uses them for lining the chambers of their nests in holes and crannies, or for making small packets, each containing an egg. Several species are common in the United States.—**l.-cycle,** *n. Bot.* The course of a spiral from leaf to leaf, either immediately above or below.—**l. door,** a folding door.—**l.-eared,** *a.* Same as LEAF-EARED.—**l.-eater,** *n.* Same as LEAF-FEEDER.—**l.-fall,** *n.* [Poet.] The fall of the leaf. See under FALL¹, *n.*—**l.-fat,** *n.* **1.** A layer of fat about the kidneys of swine from which is obtained leaf-lard. **2.** Folds of fat over the kidneys of other animals.—**l.-feeder,** *n.* Any insect that finds its staple food in the leaves of plants.—**l.-fiber machine,** a machine for preparing the fiber from pulpy plants.—**l.-finch,** *n.* The bullfinch.—**l.-flea,** *n.* A jumping plant-louse or psyllid.—**l.-folder,** *n.* A moth, the larva of which make cases for shelter by folding leaves together.—**apple l.-folder,** a moth (*Acleris minuta*) infesting apple-trees.—**grape l.-folder,** a moth (*Desmia maculalis*) the larva of which folds the grape-leaf over for a kind of shelter-case, fastening it with silk and also severing the leaf for food.—**l.-footed,** *a. Entom.* Provided with leaf-like expansions on the tarsi: phyllopod: as, specifically, the **leaf-footed bug,** a sap-sucking bug of the genus *Leptoglossus*, certain species of which are injurious to vegetables and fruit.—**l.-frog,** *n.* A South-American tree-frog or hylid of the genus *Phyllomedusa*.—**l.-gall,** *n.* See GALL¹, *n.*—**l.-gap,** *n.* A severance in the fiber of a garment, due to the presence or projection of a leaf-bud.—**l.-gilding,** *n.* Gilding done with gold-leaf.—**l. gold,** *n.* **1.** [Rare.] Native gold in the form of thin layers or leaves. **2.** Gold-leaf.—**l.-green,** *n.* Same as CHLOROPHYL.—**l.-hopper,** *n.* **1.** One of the small, slender, agile bugs of the family *Jassidæ* which suck the juices of foliage and when numerous damage cultivated plants and fruits.

Leaf-insect. 1/2

Among the leaf-hoppers which have attracted attention on account of their injuries to vegetation are the following: *The destructive leaf-hopper, Cicadula exitiosa*, which . . . sometimes infests winter wheat to a serious extent in the Southern States. The *grape-vine leaf-hopper* (*Erythroneura vitis*) is a well-known pest that infests the leaves of the grape. It is about one-eighth inch in length, crossed by two blood-red bands and a third dusky one at the middle. The rose *leaf-hopper* (*Empoa rosæ*) is also a well-known pest. COMSTOCK *Manual for the Study of Insects* p. 153. [AUTHOR 1895.]

2. Some similar and related bug, as psyllid.—**l.-insect,** *n.* **1.** Any leaf-like orthopterous insect, as of the genus *Phyllium*, with the wing-covers, and often the legs, leaf-like.—**l.-lard,** *n.* See LARD, 1.—**l.-lettuce,** *n.* A Cos lettuce. See LETTUCE, 1.—**l.-lichen,** *n.*

Same as FOLIACEOUS LICHEN.—**l.-lobe,** *n. Bot.* Any rounded section of a leaf: any leaf-lobe which is larger than a tooth, but which is not a leaflet.—**l.-louse,** *n.* A plant-louse or aphid.—**l.-man,** *n.* [-MEN, *pl.*] Same as LEAF, 1.—**l. metal,** metal (especially alloys imitating gold or silver) in very thin leaves: used in decoration.—**l.-miner,** *n.* Any of the tineid moths the larvæ of which bore into and feed on the leaves of trees and plants; as, the apple **l.-miner,** *Lithocolletis hamadryadella*, etc.—**l.-mold,** *n.* [-MOLD, *pl.*]

Leaf-miner (*Lithocolletis hamadryadella*). 1/4

Mold or earth formed from decayed leaves and used as a soil for plants. **2.** Same as WHITE MOLDS. See under MOLD², *n.*—**l.-mosaic,** *n.* The arrangement of the petioles of the lower leaves being longer than those of the upper ones. Spiral leaf-mosaic patterns also occur.—**l.-netting,** *n.* In fabrics, network bordered by a thickened edge.—**l.-nose,** *n.* A phyllostomoid bat.—**l.-nosed,** *a.* Having a nose-leaf or leaf-like cutaneous nasal expansions, as a rhinolophoid bat.—**l.-notcher,** *n.* A bluish-green beetle (*Artipus floridanus*) that eats the edges of orange-leaves in Florida.—**l.-opposed,** *a.* Bearing opposite leaves.—**l.-plant,** *n.* Any plant the distinguishing characteristic of which is its foliage, or a non-flowering plant.—**l.-red,** *n.* The red coloring matter of leaves in autumn. See ERYTHROPHYL.—**l.-roller,** *n.* The larva or Bat (*Tylonycteris pachyotis*).

Face of a Leaf-nosed

of a moth, as a tortricid, that rolls up a case for itself by rolling up leaves; as, the strawberry *leaf-roller* (*Phoxopteris fragariæ*).—**l.-rosette,** *n.* An assemblage of leaves so clustered as to give to the appearance of a rosette.—**l.-rust,** *n.* A rusted condition of leaves indicated by rusty spots caused by fungi.—**celery l.-rust,** a plant-disease caused by a rust-fungus, *Puccinia bullata*, which affects the leaves of celery, dill, parsley, and other cultivated apiaceous plants.—**orange l.-rust,** a disease that attacks wheat and other cereals, caused by the uredo and teleuto stages of certain rust-fungi species of *Puccinia*.—**tomato leaf-rust,** a disease of tomato leaves caused by any of several species of fungi of the genus *Cladosporium*.—**l.-scale,** *n.* A scale which, growing upon the stem of a plant, subsequently develops into a leaf.—**l. scar,** *n. Bot.* A scar or cicatrix left on a stem by the fall of an articulated leaf.—**l.-sewer,** *n.* The larva of a *leaf-roller*, or tortricid moth, that fastens a leaf to the stem of a leaves with silk; as, the apple *leaf-sewer* (*Phoxopteris nubeculana*).—**l.-sheath,** *n.* A modified foliar organ in the form of a membranous sheath at the node of the stem of *Equisetum*.—**l.-sickness†,** *n.* Vertigo or staggers in lambs caused by their eating oak-leaves, etc.—**l.-sight,** *n.* A vertically hinged sight on a firearm.—**l.-silver,** silver-leaf.—**l.-silvering,** *n.* The art or process of covering with silver-leaf.—**l.-soil,** *n.* Same as LEAF-MOLD.—**l.-spot,** *n.* A plant disease caused by parasitic fungi and characterized by spots on the leaves; as, the currant *leaf-spot*.—**celery-leaf spot,** a disease of celery leaves caused by the parasitic fungus *Phyllosticta apii*.—**l.-spring,** *n.* A spring made of one or more flat plates or strips: distinguished from the plate-spring.—**l.-stalk,** *n. Bot.* The petiole.—**l.-table,** *n.* A table constructed with removable leaves. See TABLE-LEAF.—**l.-tailed,** *a.* Formed with a leaf-like tail: specif., said of certain geeconoid lizards.—**l.-tendril,** *n. Bot.* A tendril which issues from a plant as appurtenant to the leaf rather than to the stem, and distinguished from the latter, which is known as a stem-tendril.—**l.-thorn,** or **-spine,** *n. Bot.* **1.** A spine or stiff, sharp-pointed, woody process which appears on some leaves, such as the holly. **2.** Any thorn that has developed this formation.—**l.-trace,** *n.* The larva of a moth that ties together leaves with silk; as, the apple *leaf-tier*, a pyralid (*Pempelia hammondi*).—**l.-trace,** *n.* All the fibrovascular bundles of a stem which become a leaf.—**l.-tier,** —**l.-turner,** *n.* A device attached to an organ or piano for turning the leaves of a music-book, etc.—**l.-valve,** *n.* A hinged valve.—**l.-wise,** *adv.* Same as LEAFWAY.—**Malabar leaves,** the mixed leaves of various species of *Cinnamomum*, formerly used in Europe in medicine.—**oblique l.,** a leaf having the midrib unequilateral.—**rough l.,** the original or true leaf of a garden or field plant; that stage of a plant's growth in which these leaves appear.—**standing l.,** that leaf of a binge which is fixed to the immovable part, as the door-post.—**to turn down a l.,** to cease for a time.—**to turn over a new l.,** to change one's ways or conduct, especially for the better.

leaf'age, 1 lif'ij; 2 lēf'aj, *n.* 1. Leaves collectively; foliage. 2. Leaf-designs by way of decoration, or the

reproduction of leaves in art; foliation. **3.** [Rare.] Compression or reduction into thin sheets or lamina; lamination.

leaf'-bar", *n.* **-scanopy**, *etc.* See under LEAF, *n.*

leaf'-bee"tle, 1 līf'-bē"tl; 2 lēf'-bē"tl, *n.* A beetle that feeds on leaves, especially a chrysomelid. It constitutes a numerous family more than 3,000 species, and is classified according to the plant it attacks; as, **bean leaf-beetle** (*Cerotoma trifurcata*); the **cherry l.** (*Galerucella cavicollis*); **clover l.** (*Cassida nebulosa*); **cottonwood l.** (*Lina scripta*); **elm l.** (*Galerucella luteola*); **four-marked l.** (*Cryptocephalus quadrimaculatus*); the **larger sugar-beet l.** (*Monaxia puncticollis*); **linden l.** (same as SADDLE-BEETLE); **locust l.** (*Odontota dorsalis*); **long-horned l.**; **southern corn l.** (see also BEETLE, *n.*); **strawberry l.** (*Typophorus canellus*); **willow l.** (*Lina scripta*).

leaf'cup", 1 līf'kŭp; 2 lēf'kŭp", *n.* **1.** A tall, stout, hairy perennial herb of the genus *Polymnia*, of the aster family; especially, in the United States, *P. uvedalia* and *P. canadensis*, so called from the cup-like form of the large leaf-scales of the outer involucre. **2.** Bear's-foot (*Helleborus fœtidus*).

leafed,] 1 lift; 2 lēft, *a.* Having leaves; as, *five-leafed*; **leafts**,] *long-leafed*.

leaf'dom, *n.* The kingdom or community of leaves.

leaf'ery, *a.* Formed in leaves.

leaf'er-y, 1 līf'ər-ı; 2 lēf'ər-ı, *n.* Foliage; leafage.

leaf'-fall", 1 -gap, *etc.* See under LEAF, *n.*
